

Clinical trial results:

A standard regimen of dexamethasone in comparison to two dexamethasone sparing regimens in addition to NEPA in preventing CINV in naïve NSCLC patients to be treated with cisplatin based chemotherapy: a three-arm, open-label, randomized study

Summary

EudraCT number	2015-005704-29
Trial protocol	IT
Global end of trial date	16 December 2019

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 May 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	16 December 2019
Global end of trial reached?	Yes
Global end of trial date	16 December 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the possibility to reduce the overall exposure to dexamethasone (DEX), when administered with an oral fixed-dose combination of netupitant and palonosetron (NEPA), to prevent chemotherapy-induced nausea and vomiting in non-small cell lung cancer (NSCLC) patients receiving a cisplatin-based chemotherapy

Protection of trial subjects:

For women of childbearing potential age: reliable contraceptive measures had to be used during all the planned course of chemotherapy and up to 30 days after last NEPA administration.

All patients were allowed to take rescue medication throughout the study period for nausea or vomiting, if necessary. The choice of recommended rescue medicine was either DEX or metoclopramide and was at the discretion of each investigator.

No other specific measures to protect trial subjects were required by the study participation.

Background therapy:

Cisplatin-based chemotherapy (cisplatin dose ≥ 70 mg/m²)

Evidence for comparator: -

Actual start date of recruitment	25 November 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Italy: 252
Worldwide total number of subjects	252
EEA total number of subjects	252

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	127
From 65 to 84 years	125
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The recruitment process for the trial has been conducted from November 2016 to November 2019 in 24 Italian centers.

All patients included in this study provided a written informed consent.

Pre-assignment

Screening details:

Age ≥ 18 years; confirmed diagnosis of NSCLC, chemotherapy-naïve, scheduled to receive the first course of cisplatin (≥ 70 mg/m²)-based chemotherapy (cisplatin either alone or in combination with antineoplastic agents with low or minimal emetogenic potential), ECOG Performance Status = 0-1; adequate hematologic, hepatic, and renal functions.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Arm A (or DEX1 arm)

Arm description:

Treatment arm A: On day 1 oral NEPA and intravenous dexamethasone 12 mg.
No further anti-emetic prophylaxis on days 2 thorough 4.

Arm type	Experimental
Investigational medicinal product name	Akynzeo
Investigational medicinal product code	IMP 1
Other name	Netupitant/palonosetron, NEPA
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Patients in each arm received oral NEPA (a capsule containing netupitant 300 mg/palonosetron 0.50 mg) 1 hour before the administration of cisplatin on the first day of chemotherapy (day 1).

Investigational medicinal product name	Desametasone
Investigational medicinal product code	IMP 2
Other name	Dexamethasone, DEX
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Patients in each arm received DEX 12 mg intravenously a maximum of 30 minutes before the administration of cisplatin on day 1.

Arm title	Arm B (or DEX3 arm)
------------------	---------------------

Arm description:

Treatment arm B: On day 1 oral NEPA and intravenous dexamethasone 12 mg.
Oral dexamethasone 4 mg once per day in the morning of days 2 and 3.

Arm type	Experimental
Investigational medicinal product name	Akynzeo
Investigational medicinal product code	IMP 1
Other name	Netupitant/palonosetron, NEPA
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Patients in each arm received oral NEPA (a capsule containing netupitant 300 mg/palonosetron 0.50 mg) 1 hour before the administration of cisplatin on the first day of chemotherapy (day 1).

Investigational medicinal product name	Desametasone
Investigational medicinal product code	IMP 2
Other name	Dexamethasone, DEX
Pharmaceutical forms	Oral drops, Solution for injection
Routes of administration	Intravenous use, Oral use

Dosage and administration details:

Patients in each arm received DEX 12 mg intravenously a maximum of 30 minutes before the administration of cisplatin on day 1.

In the DEX3 arm, patients received oral DEX 4 mg once per day in the morning of days 2 and 3.

Arm title	Arm C (or DEX4 arm)
------------------	---------------------

Arm description:

Treatment arm C: On day 1 oral NEPA and intravenous dexamethasone 12 mg.
Oral dexamethasone 4 mg twice per day on days 2 thorough 4.

Arm type	Active comparator
Investigational medicinal product name	Akynzeo
Investigational medicinal product code	IMP 1
Other name	Netupitant/palonosetron, NEPA
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Patients in each arm received oral NEPA (a capsule containing netupitant 300 mg/palonosetron 0.50 mg) 1 hour before the administration of cisplatin on the first day of chemotherapy (day 1).

Investigational medicinal product name	Desametasone
Investigational medicinal product code	IMP 2
Other name	Dexamethasone, DEX
Pharmaceutical forms	Oral drops, Solution for injection
Routes of administration	Intravenous use, Oral use

Dosage and administration details:

Patients in each arm received DEX 12 mg intravenously a maximum of 30 minutes before the administration of cisplatin on day 1.

In the DEX4 arm, patients received oral DEX 4 mg twice per day on days 2 thorough 4.

Number of subjects in period 1	Arm A (or DEX1 arm)	Arm B (or DEX3 arm)	Arm C (or DEX4 arm)
Started	84	85	83
Completed	75	75	76
Not completed	9	10	7
Adverse event, serious fatal	-	-	1
Consent withdrawn by subject	1	-	-
Not treated with IMP due to QuantiFERON test value	-	1	-
Adverse event, non-fatal	1	-	1
Death	3	1	1
Not Compliance	1	1	1
Unknown	2	4	3

Patient changed chemotherapy scheme	-	1	-
Hospitalization due to Progressive Disease	-	1	-
Lost to follow-up	1	1	-

Subject analysis sets

Subject analysis set title	Intention To Treat Set (ITT)
Subject analysis set type	Intention-to-treat

Subject analysis set description:

This population contains all the randomized patients. The ITT has been the data set used for producing statistics on disposition, demographic and anamnestic data in addition to the efficacy and safety data. For ITT efficacy analyses, complete analysis sets were obtained by replacing missing efficacy data using the MVTF method whereby missing data are treated as failures.

Subject analysis set title	Per Protocol Set (PP)
Subject analysis set type	Per protocol

Subject analysis set description:

This population contains all the randomized patients without major protocol violations/deviations as determined by the Principal Investigators. The PP was the dataset used, in addition to the ITT set, for the efficacy analyses

Statistical analyses

Statistical analysis title	Complete Response Statistical analysis_Arm A vs C
Statistical analysis description:	
For a complete responder during the Overall phase, complete response is expected to occur from day 1 (first day of chemotherapy) thorough day 5 of the first cycle chemotherapy. For a complete responder during the Acute phase, complete response is expected to occur on day 1 of the first cycle of chemotherapy. For a complete responder during the Delayed phase, complete response is expected to occur during days 2 thorough 5 of the first cycle of chemotherapy.	
Comparison groups	Arm A (or DEX1 arm) v Arm C (or DEX4 arm)
Number of subjects included in analysis	167
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[1]
P-value	≤ 0.025 ^[2]
Method	Regression, Logistic
Parameter estimate	Risk difference (RD)
Point estimate	0.004
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.137
upper limit	0.144

Notes:

[1] - The primary efficacy hypothesis was that NEPA plus 1-day DEX and, in a subordinate position, NEPA plus 3-day DEX (Test treatments) were non-inferior to NEPA plus 4-day DEX (Reference treatment) with respect to the proportion of patients who had a complete response. To accomplish this, the lower boundary of the 2-sided 95% confidence interval (CI) on the difference between the CRs (Risk Difference) must be greater than -15% with 15% used as the prefixed non-inferiority threshold.

[2] - One-sided

Statistical analyses

Statistical analysis title	No nausea Statistical analysis_Arm A vs C
Statistical analysis description:	
For a patient defined without nausea during the Overall phase, nausea graded as "none" according to the Likert scale should occur from day 1 thorough day 5 of the 1st cycle of chemotherapy. For a patient defined without nausea during the Acute phase, nausea graded as "none" should occur on day 1 of the 1st cycle of chemotherapy. For a patient defined without nausea during the Delayed phase, nausea graded as "none" should occur during days 2 thorough 5 of the first cycle of chemotherapy.	
Comparison groups	Arm A (or DEX1 arm) v Arm C (or DEX4 arm)
Number of subjects included in analysis	167
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[13]
P-value	≤ 0.025 ^[14]
Method	Regression, Logistic
Parameter estimate	Risk difference (RD)
Point estimate	-0.102
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.253
upper limit	0.049

Notes:

[13] - The two-sided 95% Confidence Limits of the difference in the proportion (Risk Difference) of patient without nausea were calculated for the Acute, Delayed and Overall phase by resorting to a generalized linear model with identity link function, binomial distribution and using treatment group as dummy covariate.

[14] - One-sided

Statistical analysis title	No nausea Statistical analysis_Arm B vs C

Statistical analyses

Statistical analysis title	No Significant Nausea Statistical analysis_A vs C
----------------------------	---

Statistical analysis description:

Patient's nausea for the Overall phase is computed using the worst patient score recorded from day 1 (first day of chemotherapy) thorough day 5 of the first cycle of chemotherapy. Patient's nausea for the Acute phase is computed using the worst patient score recorded on day 1 of the first cycle of chemotherapy. Patient's nausea for the Delayed phase, is computed using the worst patient score recorded during days 2 thorough 5 of the first cycle of chemotherapy.

Comparison groups	Arm C (or DEX4 arm) v Arm A (or DEX1 arm)
-------------------	---

Number of subjects included in analysis	167
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[17]
P-value	≤ 0.025 ^[18]
Method	Regression, Logistic
Parameter estimate	Risk difference (RD)
Point estimate	1.3
Confidence interval	
level	95 %
sides	2-sided
lower limit	-12.1
upper limit	14.7

Notes:

[17] - Descriptive analyses have been done by tabulating absolute and relative frequency through a three-way contingency table: Treatment x Day (Phase) x Nausea Score. For the ITT set, the relative frequencies were calculated on patients with missing data replaced using the MVTF approach.

[18] - One-sided

Adverse events

Adverse events information

Timeframe for reporting adverse events:

The overall study period until follow up visit (within 30 days from randomization)

Adverse event reporting additional description:

Adverse events were evaluated by the investigators according to the Common Terminology Criteria for Adverse Events.

Information about every adverse event/reaction have been collected and recorded in the Adverse Event electronic Case Report Form.

Assessment type	Systematic

Reporting groups

Reporting group title	Arm A (or DEX1 arm)
-----------------------	---------------------

Reporting group description:

Treatment arm A: On day 1 oral NEPA and intravenous dexamethasone 12 mg.
No further anti-emetic prophylaxis on days 2 thorough 4.

Reporting group title	Arm B (or DEX3 arm)
-----------------------	---------------------

Reporting group description:

Treatment arm B: On day 1 oral NEPA and intravenous dexamethasone 12 mg.
Oral dexamethasone 4 mg once per day in the morning of days 2 and 3.

Reporting group title	Arm C (or DEX4 arm)
-----------------------	---------------------

Reporting group description:

Treatment arm C: On day 1 oral NEPA and intravenous dexamethasone 12 mg.
Oral dexamethasone 4 mg twice per day on days 2 thorough 4.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 October 2018	<p>The amendment ("LUNG-NEPA_EM2 del 29.08.2018") regarded these aspects:</p> <ul style="list-style-type: none">• extension of the trial duration, with an extension of the enrollment phase from 18 months to 48 months, in order to allow the achievement of the number of patients foreseen by the study protocol;• reformulation of the statistical methodology, on the basis of the new evidence available on the dexamethasone-sparing strategy in the setting of single-day HEC. The LUNG-NEPA study was initially planned with a composite "Study Win Criteria" consisting in declaring study success if non-inferiority will be achieved in at least one of the following two comparisons: "NEPA plus 3-day DEX vs. NEPA plus 4-day DEX" or "NEPA plus 1-day DEX vs. NEPA plus 4-day DEX". With this amendment:<ul style="list-style-type: none">- the "Study Win Criteria" remained unchanged but it was introduced the prioritization between the two comparisons, as suggested by the experts: 1) "NEPA plus 1-day DEX vs. NEPA plus 4-day DEX" and, in a subordinate position, 2) "NEPA plus 3-day DEX vs. NEPA plus 4-day DEX";- the sample size changed from 588 patients (196 in each arm) to 468 patients (156 in each treatment arm), in order to have 450 enrolled patients (150 in each treatment arm), considering a 4% ineligibility rate.- the primary efficacy hypothesis changed as follows: NEPA plus 1-day DEX and, in a subordinate position, NEPA plus 3-day DEX (Test treatments) were non-inferior to NEPA plus 4-day DEX (Reference treatment) with respect to the proportion of patients who had a complete response (CR; defined as no emetic episodes, and no rescue medication use during the overall phase of the first chemotherapy cycle).
11 December 2019	<p>The amendment ("LUNG-NEPA_EM3 del 21.11.2019") regarded these aspects:</p> <ul style="list-style-type: none">• adaptation of the statistical methodology, in the light of the new evidence available on the dexamethasone-sparing strategy in the CINV (chemotherapy-induced nausea and vomiting) prevention [Ito et al. J Clin Oncol 2018; 36: 1000-1006], <p>The non-inferiority margin was set at -15% difference (DEX1 or DEX3 minus DEX4) instead the previous -10%.</p> <p>The study protocol was amended as follows:</p> <p>The primary efficacy hypothesis was that NEPA plus 1-day DEX and, in a subordinate position, NEPA plus 3-day DEX (Test treatments) were non-inferior to NEPA plus 4-day DEX (Reference treatment) with respect to the proportion of patients who had a complete response. To accomplish this, the lower boundary of the 2-sided 95% confidence interval (CI) on the difference between the CRs (Risk Difference) was to be greater than -15% with 15% used as the prefixed non-inferiority threshold.</p> <p>A sample size of 210 eligible and assessable patients when randomized in a 1:1:1 ratio (that is 70 patients in each arm) achieved 80% power to detect a noninferiority margin equal to 15% in the prioritized comparison "DEX1 arm vs. DEX4 arm" assuming that the proportion of CR during the overall phase would be 90% in the reference arm [9] and a one-sided type I error rate equal to 0.025. Assuming an attrition rate of 4%, at least 73 eligible and assessable patients per arm needed.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

1. Unblinding; however, the consistency of overall findings supports the validity of the study results.
2. Females represented only 33% of study population; however, this is consistent with recent evidence regarding patients undergoing cisplatin chemo
