

Clinical trial results:

Effect of IV iron (ferric carboxymaltose, Ferinject) on exercise tolerance, symptoms and quality of life in patients with heart failure with preserved ejection fraction (HFpEF) and iron deficiency with and without anaemia

Summary

EudraCT number	2015-005757-12
Trial protocol	DE
Global end of trial date	30 December 2022

Results information

Result version number	v1 (current)
This version publication date	27 January 2024
First version publication date	27 January 2024

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 December 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	30 November 2022
Global end of trial reached?	Yes
Global end of trial date	30 December 2022
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

Primary efficacy endpoint:

The primary endpoint is the difference in exercise capacity from baseline to visit 5 as assessed by the 6-minute walking test after initiation of therapy (FCM or placebo/saline) in patients with HFpEF and ID

Protection of trial subjects:

Monitor patients for elevated iron parameters or Hb levels and proceed according to stopping rule below. Procedures are decided by the un-blinded physician.

In case of elevated levels of ferritin > 800 µg/L, or ferritin > 500 µg/L when TSAT > 50%, or Hb > 16 g/dL at any stage, iron treatment has to be discontinued and placebo/saline is to be given instead. In this case, ferritin, TSAT and Hb should be re-checked at the next visit, and these visits should coincide with planned Dosing Visits and/or Assessment Visits.

In case severe anaemia develops (i.e. Hb ≤ 9 g/dL), the patient is to discontinue treatment but remain in the study and further management of anaemia is at the investigator's discretion.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 June 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 42
Worldwide total number of subjects	42
EEA total number of subjects	42

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	3
From 65 to 84 years	35
85 years and over	4

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 7 study sites in Germany . At 6 study centres were patients enrolled.

Pre-assignment

Screening details:

A total of number of 76 subjects entered the screening period 76 patients were screened, of whom 42 remaining subjects were randomised.

Period 1

Period 1 title	overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	FCM-Arm

Arm description:

Subjects received intravenous ferric carboxymaltose at week 0(1-2), 16 and 32

Arm type	Experimental
Investigational medicinal product name	Ferinject
Investigational medicinal product code	7705-08-0
Other name	Ferrum (III)-Ion, Eisencarboxymaltose
Pharmaceutical forms	Solution for solution for infusion
Routes of administration	Infusion

Dosage and administration details:

FCM solution (Ferinject®) for parenteral application, 50 mg/mL iron. Medication will be given as a short time infusion (IV) over 15 minutes in 100mL NaCl.

5% w/v iron containing 50 mg iron per mL, as sterile solution of Ferinject® in water for injection.

Ferinject had administered in doses of 500-1000 mg at each visit via infusion

Arm title	Placebo
------------------	---------

Arm description:

Placebo/saline patients receive the number of normal saline infusions over 15 minutes corresponding to the Ferinject® group.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Infusion

Dosage and administration details:

Subjects received placebo (identical with study drug apart from active ingredient)

Number of subjects in period 1	FCM-Arm	Placebo
Started	20	22
Completed	16	15
Not completed	4	7
late Screen failure Patient takes immunosuppressiva	-	1
Consent withdrawn by subject	1	2

Placebo/saline patients receive the number of normal saline infusions over 15 minutes corresponding to the Ferinject® group.	

Primary: difference in 6-minute-walking distance

End point title	difference in 6-minute-walking distance ^[1]
End point description:	
The primary endpoint for efficacy is the difference in 6-minute-walking distance (in meters) from baseline to visit 5. Treatment groups will be compared using a fixed effects ANCOVA model for repeated measures (MMRM): The observed change from baseline 6-minute-walking distance to each visit (visits 3 to 7) is the dependent variable. The model will include treatment, visit, treatment-visit interaction, geographic region, presence of AF at baseline, and haemoglobin status at baseline (Hb < 12g/dL vs. Hb ≥12.0 g/dL) as categorical fixed effects and age at baseline, LVEF at baseline, and baseline distance of the 6 minute-walk as continuous fixed effects. An unstructured covariance pattern will be used to estimate the variance-covariance of the within-subject repeated measures. Parameters will be estimated using REML with the Newton-Raphson algorithm and using Kenward-Roger method for calculating denominator degrees of freedom.	
End point type	Primary
End point timeframe:	
from baseline to visit 5	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: This study was prematurely terminated due to Sponsor decision. Primary and secondary objectives were not achieved in this study due to the premature termination.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
05 June 2019	new protocol version 3.5 dated, 04.06.2019: prolongation of the duration of the trial: estimated date of termination of recruitment: 30.04.2020, estimated date last patient, last visit: 30.04.2021.
25 October 2021	new protocol version 3.6, dated 01.11.2021: Prolongation of the duration of the trial: Estimated date of termination of recruitment: 30.12.2021, Estimated date last patient, last visit: 30.12.2022; Change of principal investigator in trial site
07 July 2022	new protocol version 3.7, dated 24.03.2022: Add exclusion criteria: 4. SARS-CoV-2 infection

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Trial did not collect enough data to report on the primary endpoint of the study.

Notes:
