Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000916-PIP01-10
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 February 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	27 January 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate safety of 14-day repeated lixisenatide doses of 5 microgram [mcg], 10 mcg and 20 mcg as compared to placebo in paediatric subjects with Type 2 diabetes mellitus (T2DM).

Protection of trial subjects:

The study was conducted by investigators experienced in the treatment of paediatric subjects. The parent(s) or guardian(s) as well as the children were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time. In addition to the consent form for the parent(s)/guardian(s), an assent form in child-appropriate language was provided and explained to the child. Repeated invasive procedures were minimised. The number of blood samples as well as the amount of blood drawn were adjusted according to age and weight. A topical anesthesia may have been used to minimise distress and discomfort.

Background therapy:

Metformin and/or basal insulin was used as non-investigational medicinal product and were administered according to local label.

Evidence for comparator: -

Actual start date of recruitment	17 May 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 1
Country: Number of subjects enrolled	United States: 5
Country: Number of subjects enrolled	Mexico: 8
Country: Number of subjects enrolled	Mauritius: 5
Country: Number of subjects enrolled	Turkey: 3
Country: Number of subjects enrolled	South Africa: 1
Worldwide total number of subjects	23
EEA total number of subjects	1

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	23
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 11 sites in 6 countries. A total of 23 subjects were screened between 17 May 2017 and 23 November 2019.

Pre-assignment

Screening details:

A total of 23 subjects were randomised and treated in the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Carer, Subject

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Placebo
------------------	---------

Arm description:

Subjects received a dose of placebo (matched to lixisenatide) as subcutaneous (SC) injection from Day 1 to Day 42.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo (matched to lixisenatide) was administered in abdominal area. Subjects were fasted for at least 1 hour prior to dosing.

Arm title	Lixisenatide
------------------	--------------

Arm description:

Subjects received 3 doses of lixisenatide (5 mcg, 10 mcg and 20 mcg) as SC injection in incremental sequential dose escalation steps of 2 weeks from Day 1 to Day 42.

Arm type	Experimental
Investigational medicinal product name	Lixisenatide
Investigational medicinal product code	AVE0010
Other name	Lyxumia
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Lixisenatide was administered in abdominal area. Each subject underwent a dose escalation according to the following paradigm: 5 mcg (Day 1 to 14), then 10 mcg (Day 15 to 28) and 20 mcg (Day 29 to 42). Subjects were fasted for at least 1 hour prior to dosing.

Number of subjects in period 1	Placebo	Lixisenatide
Started	5	18
Completed	5	17
Not completed	0	1
Poor compliance to protocol	-	1

Primary: Safety profile: Number of Subjects With Treatment-Emergent Adverse Events (TEAEs)

End point title	Safety profile: Number of Subjects With Treatment-Emergent Adverse Events (TEAEs) ^{[1][2]}
End point description: Adverse event (AE): any untoward medical occurrence in a subject who received study drug and did not necessarily had a causal relationship with study treatment. Serious AEs (SAEs): Any untoward medical occurrence that resulted in any of the following outcomes: death, life-threatening, required initial or prolonged in-patient hospitalisation, persistent or significant disability/incapacity, congenital anomaly/birth defect, or considered as medically important event. AE of special interest (AESI): AE (serious/nonserious) of scientific and medical concern, specific to study drug or program, which were monitored and immediately notified to Sponsor. TEAEs: AEs that occurred or worsened or became serious during on-treatment phase (time from first study drug administration up to 3 days after last study drug administration [i.e., up to 45 days]). Analysis was performed on safety population which included subjects who were exposed to study drug regardless of amount of treatment administered.	
End point type	Primary
End point timeframe: From Baseline up to end-of-study (EOS; up to Day 45)	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As the endpoint was descriptive in nature, no statistical analysis was provided.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Data were planned to be collected and analysed for specified arms only.

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 September 2016	Following changes were made: -A part of the standard reporting text was deleted for unknown technical reasons in the finalisation procedure of the document. The reason for this Amendment was to re-include the standard reporting text. -Guidelines for reporting SAEs was updated.
19 July 2017	Following changes were made: - Inclusion Criterion: In order to accommodate local medical paediatric practice and clinical guidelines the global protocol did not specify the exact metformin dose. The other aspects of the Inclusion Criterion would not be changed as they were requirements. - Exclusion Criterion: Based on the local paediatric medical practice and clinical necessity, the utilisation of psychotropic agents would be accepted as long as the subjects were stabilised for at least three months on this therapy.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats
