

Clinical trial results:

A randomized, multi-center, double blind (sponsor open), placebo-controlled study to assess the efficacy, safety, tolerability, pharmacokinetics and pharmacodynamics of GSK3117391 in subjects with moderate to severe, active rheumatoid arthritis

Summary

EudraCT number	2015-005800-27
Trial protocol	PL
Global end of trial date	14 November 2017

Results information

Result version number	v2 (current)
This version publication date	11 April 2019
First version publication date	29 November 2018
Version creation reason	

Trial information

Trial identification

Sponsor protocol code	204957

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 February 2018
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	14 November 2017
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To assess the efficacy of GSK3117391, in participants with severe RA.

Protection of trial subjects:

Not Applicable

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 December 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 1
Country: Number of subjects enrolled	Romania: 2
Worldwide total number of subjects	3
EEA total number of subjects	3

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	2
From 65 to 84 years	1
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study was conducted in participants with severe, active rheumatoid arthritis receiving GSK3117391, 40 milligrams (mg) or placebo at one center in Poland and one in Romania.

Pre-assignment

Screening details:

This study was terminated early by the sponsor following internal review. A total number of 26 participants were screened, of which three participants were enrolled in the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Eligible participants in this arm, received a matching placebo to the study drug GSK3117391, administered orally once a day as 2 capsules in the morning, following every other day, for 28-days.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Matching placebo, to the study drug, was administered, orally, as 2 capsules, in morning of every other day for 28 days.

Arm title	GSK3117391, 40 mg
------------------	-------------------

Arm description:

Eligible participants in this arm, received a dose of 40 mg of GSK3117391, administered orally once a day as 2 capsules of 20 mg each in the morning, following every other day, for 28-days.

Arm type	Experimental
Investigational medicinal product name	GSK3117391
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

The drug was administered, orally as 20 mg, as 2 capsules, in morning of every other day for 28 days.

Number of subjects in period 1	Placebo	GSK3117391, 40 mg
Started	2	1
Completed	1	1
Not completed	1	0
Protocol-defined stop criteria reached	1	-

Baseline characteristics

Reporting groups

Reporting group title	Placebo

End points

End points reporting groups

Reporting group title	Placebo
Reporting group description:	
Eligible participants in this arm, received a matching placebo to the study drug GSK3117391, administered orally once a day as 2 capsules in the morning, following every other day, for 28-days.	
Reporting group title	GSK3117391, 40 mg
Reporting group description:	
Eligible participants in this arm, received a dose of 40 mg of GSK3117391, administered orally once a day as 2 capsules of 20 mg each in the morning, following every other day, for 28-days.	
Subject analysis set title	GSK3339189
Subject analysis set type	Sub-group analysis
Subject analysis set description:	
GSK3339189 is a metabolite of GSK3117391. Eligible participants in this arm, received a dose of 40 mg of GSK3117391, administered orally once a day as 2 capsules of 20 mg each in the morning, following every other day, for 28-days.	

Primary: Change from Baseline in Disease activity score for 28 different joints with (DAS28) C-reactive protein (CRP) at Day 28

End point title	Change from Baseline in Disease activity score for 28 different joints with (DAS28) C-reactive protein (CRP) at Day 28 ^[1]
End point description:	
The DAS28 score is a derived measurement with differential weighing given to each component as: Tender/Painful Joint Count (TJC28) and swollen joint count (SJC28) both scored 0-28 (higher scores indicate higher disease activity), CRP measured in milligrams per liter and Patient's Global Assessment of Arthritis (PtGA) (visual analogue scale with values from 0 [best] to 100 [worst]). The formula used to calculate DAS28 score was 0.56 multiplied by square root of TJC28 plus 0.28 multiplied by square root of SJC28 plus 0.36 log of (CRP plus 1) plus 0.014 multiplied by PtGA plus 0.96. DAS28 scores ranged from 0 (best) to 10 (worst). Baseline was defined at Day 1 (pre-dose). Change from Baseline was post-baseline value minus the value at Baseline. Safety Population consisted of all participants who received at least one dose of study medication. Individual participant data at Day 28 has been presented. 99999 indicates that data could not be calculated since only one participant was analyzed	
End point type	Primary
End point timeframe:	
Baseline (pre-dose, Day 1) and Day 28	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Statistical analysis for this outcome measure was not performed.

Secondary: Number of participants with serious adverse events (SAEs) and non-SAEs

End point title	Number of participants with serious adverse events (SAEs) and non-SAEs
-----------------	--

End point description:

An AE is any untoward medical occurrence in a clinical investigation participant, temporally associated with the use of a medicinal product, whether or not considered related to the medicinal product. SAE is defined as any untoward medical occurrence that, at any dose results in death, is life-threatening, requires hospitalization or prolongation of existing hospitalization, results in disability, is a congenital anomaly/ birth defect and other situations which involve medical or scientific judgment, and is associated with liver injury and impaired liver function.

Statistical analyses

No statistical analyses for this end point

Secondary: Changes from Baseline in soluble cytokine

End point title	Changes from Baseline in soluble cytokine
End point description:	
Change from Baseline, was defined as the post-Baseline value minus the value at Baseline. Baseline was defined as the value from the Day 1 (pre-dose). Blood samples were planned to be analyzed by flow cytometry for cell markers to determine any changes after treatment with GSK3117391. This analysis was planned but the assay was not performed due to sample size being too small at the time of early study termination.	
End point type	Secondary
End point timeframe:	
Baseline (pre-dose, Day 1) and up to 44 Days	

End point values	Placebo	GSK3117391, 40 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	0 ^[67]	0 ^[68]		
Units: Picogram per milliliter				
arithmetic mean (standard deviation)	()	()		

Notes:

[67] - Safety Population. Data was not collected due to small sample size during early study termination.

[68] - Safety Population. Data was not collected due to small sample size during early study termination.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All non-SAEs and SAEs were collected from start of the study treatment (Day 1) up to Day 44.

Adverse event reporting additional description:

The Safety Population was used to assess the non-SAEs and SAEs.

Assessment type	Systematic

Reporting groups

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Eligible participants in this arm, received a matching placebo to the study drug GSK3117391, administered orally once a day as 2 capsules in the morning, following every other day, for 28-days.

Reporting group title	GSK3117391, 40 mg
-----------------------	-------------------

Reporting group description:

Eligible participants in this arm, received a dose of 40 mg of GSK3117391, administered orally once a day as 2 capsules of 20 mg each in the morning, following every other day, for 28-days.

Serious adverse events	Placebo	GSK3117391, 40 mg	
Total subjects affected by serious adverse events			
subjects affected / exposed	0 / 2 (0.00%)	0 / 1 (0.00%)	
number of deaths (all causes)	0	0	
number of deaths resulting from adverse events			

Frequency threshold for reporting non-serious adverse events: 0 %

Non-serious adverse events	Placebo	GSK3117391, 40 mg	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	2 / 2 (100.00%)	0 / 1 (0.00%)	
Blood and lymphatic system disorders			
Leukopenia			
subjects affected / exposed	1 / 2 (50.00%)	0 / 1 (0.00%)	
occurrences (all)	1	0	
Musculoskeletal and connective tissue disorders			
Rheumatoid arthritis			

subjects affected / exposed	1 / 2 (50.00%)	0 / 1 (0.00%)	
occurrences (all)	1	0	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 September 2016	Amendment 01: The changes in this amendment are to address typographical errors and inconsistency between the Time and Events tables and the protocol text, particularly with respect to lab parameters (Methemoglobin [MetHb]), coagulation, requirement for clinical chemistry/urinalysis at day 7, 14 and 21 and pharmacodynamic [PD] biomarkers)
08 December 2016	Amendment 02: The changes in this amendment are to combine the Internal Safety review committee (iSRC) and Data Review Committee (DRC) interim review committees, in addition to changes for clarification between the Time and Events table and the text of the protocol.
01 June 2017	Amendment 03: This amendment, has been created to provide clarity regarding extension to the screening window for the washout of background Disease-Modifying Anti-Rheumatic Drug (DMARDs), ensuring blinding of the monocyte count during the study conduct, and other study requirements throughout the protocol. In addition, further detail has been added to some of the inclusion/exclusion criteria and assessment requirements for clarification.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
