

## Clinical trial results:

### A Multicenter, Randomized, Open-label, 3-Arm Phase 3 Study of Encorafenib + Cetuximab Plus or Minus Binimetinib vs. Irinotecan/Cetuximab or Infusional 5-Fluorouracil (5-FU)/Folinic Acid (FA)/Irinotecan (FOLFIRI)/Cetuximab with a Safety Lead-in of Encorafenib + Binimetinib + Cetuximab in Patients with BRAF V600E-mutant Metastatic Colorectal Cancer

#### Summary

EudraCT number	2015-005805-35
Trial protocol	GB HU BE AT NL CZ DK ES NO DE IT
Global end of trial date	10 November 2022

#### Results information

Result version number	v1 (current)
This version publication date	13 November 2023
First version publication date	13 November 2023

#### Trial information

##### Trial identification

Sponsor protocol code	C4221009
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02928224
WHO universal trial number (UTN)	-
Other trial identifiers	ARRAY-818-302: BEACON CRC

Notes:

##### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 December 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	10 November 2022
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

Safety Lead-in-

- Assess the safety/tolerability of the combination of encorafenib + binimetinib + cetuximab in subjects with B-RAF proto-oncogene, serine/threonine kinase (BRAF) V600E-mutant (BRAFV600E) metastatic colorectal cancer (mCRC).

Randomised Phase 3-

In subjects with BRAFV600E mCRC:

- Compare the activity of encorafenib + binimetinib + cetuximab (Triplet Arm) vs. irinotecan/cetuximab or 5- fluorouracil (5-FU)/folinic acid (FA)/irinotecan (FOLFIRI)/cetuximab (Control Arm) as measured by overall survival (OS)  
- Compare the activity of encorafenib + binimetinib + cetuximab (Triplet Arm) vs. irinotecan/cetuximab or FOLFIRI/cetuximab (Control Arm) as measured by Objective Response Rate (ORR) per Blinded Independent Central Review (BICR).

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonisation (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trials subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 October 2016
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	6 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 7
Country: Number of subjects enrolled	Australia: 36
Country: Number of subjects enrolled	Austria: 6
Country: Number of subjects enrolled	Belgium: 45
Country: Number of subjects enrolled	Brazil: 20
Country: Number of subjects enrolled	Canada: 7
Country: Number of subjects enrolled	Czechia: 10
Country: Number of subjects enrolled	Denmark: 10
Country: Number of subjects enrolled	France: 25
Country: Number of subjects enrolled	Germany: 29

Country: Number of subjects enrolled	Hungary: 6
Country: Number of subjects enrolled	Israel: 8
Country: Number of subjects enrolled	Italy: 85
Country: Number of subjects enrolled	Japan: 27
Country: Number of subjects enrolled	Mexico: 2
Country: Number of subjects enrolled	Netherlands: 39
Country: Number of subjects enrolled	Norway: 15
Country: Number of subjects enrolled	Poland: 11
Country: Number of subjects enrolled	Russian Federation: 27
Country: Number of subjects enrolled	Korea, Democratic People's Republic of: 41
Country: Number of subjects enrolled	Spain: 102
Country: Number of subjects enrolled	Taiwan: 17
Country: Number of subjects enrolled	Turkey: 7
Country: Number of subjects enrolled	Ukraine: 4
Country: Number of subjects enrolled	United Kingdom: 31
Country: Number of subjects enrolled	United States: 85
Worldwide total number of subjects	702
EEA total number of subjects	383

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	450
From 65 to 84 years	252
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

Subjects were at least 18 years of age with confirmed metastatic colorectal cancer (CRC) whose disease had progressed after 1 or 2 prior regimens in the metastatic setting and whose tumor tissue was BRAF V600E-mutant as previously determined by a local assay at any time prior to screening.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Combined Safety Lead-in

Arm description:

Encorafenib + binimetinib + cetuximab. Encorafenib: Orally, once daily. Binimetinib: Orally, twice daily. Cetuximab: Standard of care.

Arm type	Experimental
Investigational medicinal product name	Encorafenib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

300 milligrams (mg), once daily.

Investigational medicinal product name	Cetuximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

400 mg/meter square initial dose (120-minute infusion), then 250 mg/meter square (60-minute infusion) thereafter, once weekly.

Investigational medicinal product name	Binimetinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

45 mg, twice daily

<b>Arm title</b>	Phase 3: Triplet Arm
------------------	----------------------

Arm description:

Encorafenib + binimetinib + cetuximab. Encorafenib: Orally, once daily. Binimetinib: Orally, twice daily. Cetuximab: Standard of care.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Encorafenib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details: Encorafenib: 300 mg, once daily.	
Investigational medicinal product name	Cetuximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use
Dosage and administration details: 400 mg/meter square initial dose (120-minute infusion), then 250 mg/meter square (60-minute infusion) thereafter, once weekly.	
Investigational medicinal product name	Binimetinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use
Dosage and administration details: 45 mg, twice daily	
<b>Arm title</b>	Phase 3: Doublet Arm
Arm description: Encorafenib + cetuximab. Encorafenib: Orally, once daily. Cetuximab: Standard of care.	
Arm type	Experimental
Investigational medicinal product name	Cetuximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use
Dosage and administration details: 400 mg/meter square initial dose (120-minute infusion), then 250 mg/meter square (60-minute infusion) thereafter, once weekly.	
Investigational medicinal product name	Encorafenib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details: 300 mg, once daily.	
<b>Arm title</b>	Phase 3:Control Arm
Arm description: Investigator's choice of either irinotecan/cetuximab or FOLFIRI/cetuximab. Cetuximab: Standard of care. Irinotecan: Standard of care. Folinic Acid: Standard of care. 5-Fluorouracil: Standard of care. Following protocol amendment, eligible subjects could crossover to receive either triplet or doublet regimen.	
Arm type	Active comparator

Investigational medicinal product name	Irinotecan/cetuximab or FOLFIRI/cetuximab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Cetuximab: Standard of care. Irinotecan: Standard of care. Folinic Acid: Standard of care. 5-Fluorouracil: Standard of care.

Folinic Acid: Standard of care. 5-Fluorouracil: Standard of care. Following protocol amendment, eligible subjects could crossover to receive either triplet or doublet regimen.	
Subject analysis set title	Pharmacokinetic Population of Encorafenib
Subject analysis set type	Sub-group analysis
Subject analysis set description: Encorafenib + binimetinib + cetuximab. Encorafenib + cetuximab. Investigator's choice of either irinotecan/cetuximab or FOLFIRI/cetuximab.	

### Primary: (Safety Lead-in) Number of Subjects with Adverse Events (AEs)

End point title	(Safety Lead-in) Number of Subjects with Adverse Events
End point description: An AE is any untoward medical occurrence in a subject or clinical study subject, temporally associated with the use of study drug, whether or not considered related to the study drug. Number of subjects reporting AEs were reported in this endpoint. The Safety Set consisted of all subjects who received at least 1 dose of study drug and had at least 1 post-treatment assessment, which may have included death. Subjects were analysed according to treatment received.	
End point type	Primary
End point timeframe: Duration of safety lead-in, approximately 6 months (up to 28 days per cycle)	

#### Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive data was planned to be analysed.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Only descriptive data was planned to be analysed.

End point values	Combined Safety Lead-in			
Subject group type	Reporting group			
Number of subjects analysed	37			
Units: Subjects	37			

## Statistical analyses

No statistical analyses for this end point

### Primary: (Safety Lead-in) Incidence of Dose Interruptions, Dose Modifications and Discontinuations due to Adverse Events (AEs) - Interim Analysis

End point title	(Safety Lead-in) Incidence of Dose Interruptions, Dose Modifications and Discontinuations due to Adverse Events (AEs) - Interim Analysis <sup>[3]</sup> <sup>[4]</sup>
-----------------	--

End point description:

An AE is any untoward medical occurrence in a subject or clinical study subject, temporally associated with the use of study drug, whether or not considered related to the study drug. Number of subjects with dose interruptions, dose modifications and dose discontinuations due to AEs were reported in this endpoint. The Safety Set consisted of all subjects who received at least 1 dose of study drug and had at least 1 post-treatment assessment, which may have included death. Subjects were analysed according to treatment received.

End point type	Primary
----------------	---------

End point timeframe:

Duration of safety lead-in, approximately 6 months (up to 28 days per cycle)

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive data was planned to be analysed.

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Only descriptive data was planned to be analysed.

End point values	Combined Safety Lead-in			
Subject group type	Reporting group			
Number of subjects analysed	37			
Units: Subjects	26			

## Statistical analyses

No statistical analyses for this end point

### Primary: (Safety Lead-in) Number of Subjects with Dose-Limiting Toxicities (DLTs)

End point title	(Safety Lead-in) Number of Subjects with Dose-Limiting Toxicities (DLTs) <sup>[5]</sup> <sup>[6]</sup>
-----------------	--

End point description:

The dose-determining set (DDS) consisted of all combined safety lead-in (CSLI) subjects from the safety set who either completed a minimum exposure requirement (received  $\geq 75\%$  dose intensity of the planned dose for each binimetinib, encorafenib and cetuximab) and had sufficient safety evaluations or experienced a dose-limiting toxicity (DLT).

End point type	Primary
----------------	---------

End point timeframe:

Cycle 1 (up to 28 days)

Notes:

[5] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive data was planned to be analysed.

[6] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Only descriptive data was planned to be analysed.

## Primary: (Phase 3) Objective Response Rate (ORR) by Blinded Independent Central Review (BICR) per Response Evaluation Criteria in Solid Tumors (RECIST), v1.1 of Triplet Arm vs. Control Arm

End point title	(Phase 3) Objective Response Rate (ORR) by Blinded Independent Central Review (BICR) per Response Evaluation Criteria in Solid Tumors (RECIST), v1.1 of Triplet Arm vs. Control Arm <sup>[11]</sup>
-----------------	---

### End point description:

ORR per RECIST, v1.1, was defined as the percentage of subjects achieving an overall best response of complete response (CR) or partial response (PR) divided by the total number of subjects, where CR: disappearance of all target and non-target lesions and normalisation of tumor marker level, all lymph nodes must be non-pathological in size(<10 millimeter [mm] short axis), and PR: at least 30% decrease in sum of diameters of target lesions, taking as reference the baseline sum diameters persistence of one or more non-target lesion and/or maintenance of tumor marker level above the normal limits. The Phase 3 Response Efficacy Set consisted of the first 330 subjects randomised into the Phase 3 portion of the study and any additional subjects randomised on the same day as the 330th randomised subject. Here, "Number of Subjects Analysed" signifies subjects evaluable for this endpoint.

End point type	Primary
----------------	---------

### End point timeframe:

Duration of Phase 3, approximately 6 months (up to 28 days per cycle)

### Notes:

[11] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Only descriptive data was planned to be analysed.

End point values	Phase 3: Triplet Arm	Phase 3:Control Arm		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	111	107

Analysis type	other
P-value	< 0.0001
Method	Chi-squared

## Secondary: (Safety Lead-in) Objective Response Rate (ORR) by Investigator

End point title	(Safety Lead-in) Objective Response Rate (ORR) by Investigator <sup>[12]</sup>
-----------------	--

End point description:

ORR per RECIST, v1.1, was defined as the percentage of subjects achieving an overall best response of CR or PR, where CR: disappearance of all target and non-target lesions and normalisation of tumor marker level, all lymph nodes must be non-pathological in size(<10 mm short axis), and PR: at least 30% decrease in sum of diameters of target lesions, taking as reference the baseline sum diameters persistence of one or more non-target lesion(s) and/or maintenance of tumor marker level above the normal limits. The Safety Lead-in (SLI) Efficacy Set consisted of all CSLI subjects in the FAS who were identified at screening as having a BRAF V600E mutation (per local or central testing). Here, "Number of Subjects Analysed" signifies subjects evaluable for this endpoint.

End point type	Secondary
----------------	-----------

End point timeframe:

From start of study treatment until 30 days post last dose of study treatment (maximum treatment exposure of 280 weeks)

Notes:

[12] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Only descriptive data was planned to be analysed.

ORR per RECIST, v1.1, was defined as the percentage of subjects achieving an overall best response of CR or PR, where CR: disappearance of all target and non-target lesions and normalisation of tumor marker level, all lymph nodes must be non-pathological in size(<10 mm short axis), and PR: at least 30% decrease in sum of diameters of target lesions, taking as reference the baseline sum diameters persistence of one or more non-target lesions and/or maintenance of tumor marker level above the normal limits. The Phase 3 Response Efficacy Set consisted of the first 330 subjects randomised into the Phase 3 portion of the study and any additional subjects randomised on the same day as the 330th randomised subject. Here, "Number of Subjects Analysed" signifies subjects evaluable for this endpoint.

End point type	Secondary
----------------	-----------

End point timeframe:

Duration of Phase 3, approximately 6 months (up to 28 days per cycle)

Notes:

[30] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Only descriptive data was planned to be analysed.

-----------------	---

End point description:

The EORTC QLQ-C30 questionnaire consisted of 30 questions generating 5 functional scores (physical, role, cognitive, emotional, & social); a global health (GH) status/global quality of life scale score; 3 symptom scale scores (fatigue, pain, & nausea & vomiting); & 6 standalone one-item scores that capture additional symptoms (dyspnea, appetite loss, sleep disturbance, constipation, & diarrhea) & perceived financial burden. All items were graded by severity experienced during previous week & used 4-point-scale (1: not at all, 2: a little, 3: quite a bit, 4: very much). The scores were converted to health-related quality of life (HRQoL) scale ranging from 0-100. Higher scores indicating higher response levels (i.e., higher functioning, higher symptom severity). The FAS for Phase 3 portion of study consisted of all randomised Phase 3 subjects. Here, 'n'=subjects evaluable for the specified timepoints. 99999 indicated data could not be calculated due to insufficient subjects with events.

## Secondary: (Phase 3) Change From Baseline in the Functional Assessment of Cancer Therapy-Colon Cancer (FACT-C) in Triplet Arm vs Control Arm, Doublet Arm vs Control, and Triplet vs Doublet

End point title	(Phase 3) Change From Baseline in the Functional Assessment of Cancer Therapy-Colon Cancer (FACT-C) in Triplet Arm vs Control Arm, Doublet Arm vs Control, and Triplet vs Doublet <sup>[46]</sup>
-----------------	---

End point description:

FACT-C=Functional Assessment of Chronic Illness Therapy (FACIT) ,which assessed HRQoL of cancer subjects & subjects with other chronic illnesses. It consists of total 36 items (27 items of general version of FACT-C and disease-specific subscale containing 9 CRC-specific items), summarised to 5 subscales: physical well-being (7 items),functional well-being (7 items), social/family well-being (7 items);all 3 subscales range:0-28, emotional well-being (6 items)range:0-24, colorectal cancer subscale (9 items) range:0-36; higher subscale score=better QoL. All single-item measures range:0='Not at all' to 4='Very much'. Table summarises functional well-being subscale, individual questions are linearly scaled & combined to form functional well-being subscale score (range 0-28). High score represents better QoL.FAS for Phase 3 portion=all randomised Phase 3 subjects. Here, 'n'=subjects evaluable for specified timepoints. 99999=data could not be calculated due to insufficient subjects.

### Secondary: (Phase 3) Change From Baseline in the EuroQol-5D-5L Visual Analog Scale (EQ-5D-5L VAS) in Triplet Arm vs Control Arm, Doublet Arm vs Control, and Triplet vs Doublet

End point title	(Phase 3) Change From Baseline in the EuroQol-5D-5L Visual Analog Scale (EQ-5D-5L VAS) in Triplet Arm vs Control Arm, Doublet Arm vs Control, and Triplet vs Doublet <sup>[47]</sup>
-----------------	--

#### End point description:

The EQ-5D-5L contains 1 item for each of 5 dimensions of health-related QoL (i.e., mobility, self-care, usual activities, pain or discomfort and anxiety or depression). Response options for each item varied from having no problems to moderate problems or extreme problems. The EQ-5D-5L (v4.0) is a standardised measure of health utility that provides a single index value for one's health status. The EQ-5D-5L is frequently used for economic evaluations of health care and has been recognised as a valid and reliable instrument for this purpose. The EQ visual analog scale (VAS) is a score that is directly reported by the subject and ranges from 0 to 100 (higher is better quality health). The FAS for the Phase 3 portion of the study consisted of all randomised Phase 3 subjects. Here, 'n' signifies subjects evaluable for the specified timepoints. 99999 indicated data could not be calculated due to insufficient subjects.

## Secondary: (Phase 3) Change From Baseline in the Subject Global Impression of Change (PGIC) in Triplet Arm vs Control Arm, Doublet Arm vs Control, and Triplet vs Doublet

End point title	(Phase 3) Change From Baseline in the Subject Global Impression of Change (PGIC) in Triplet Arm vs Control Arm, Doublet Arm vs Control, and Triplet vs Doublet <sup>[48]</sup>
-----------------	--

End point description:

The PGIC is a measure of subject's perceptions of change in their symptoms over time that can be used as an anchoring method to determine the minimal clinically important difference for other subject reported outcome (PROs). For this assessment, subjects answered the following question: "Since starting treatment, my colorectal cancer symptoms are: (1) very much improved, (2) much improved, (3) minimally improved, (4) no change, (5) minimally worse, (6) much worse or (7) very much worse." The FAS for the Phase 3 portion of the study consisted of all randomised Phase 3 subjects. Here, 'n' signifies subjects evaluable for the specified timepoints. 99999 indicated data could not be calculated due to insufficient subjects.

## Secondary: Phase 3: Number of Subjects With Shift From Baseline to Worst Change from Baseline in Visual Acuity Logarithm of the Minimum Angle of Resolution (LogMAR) Score

End point title	Phase 3: Number of Subjects With Shift From Baseline to Worst Change from Baseline in Visual Acuity Logarithm of the Minimum Angle of Resolution (LogMAR) Score <sup>[70]</sup>
-----------------	---

End point description:

Visual acuity was measured using the Snellen visual acuity conversion chart. This was determined by establishing the smallest optotypes that could be identified correctly by the subject at a given observation distance. Snellen visual acuity was reported as a Snellen fraction (m/M) in which the numerator (m) indicated the test distance and the denominator (M) indicated the distance at which the gap of the equivalent Landolt ring subtends 1 minute of arc. The LogMAR score was calculated as  $-\log(m/M)$ . The maximum increase in score of  $\leq 0$ ,  $0$  to  $< 0.1$ ,  $0.1$  to  $< 0.2$ ,  $0.2$  to  $< 0.3$  and  $\geq 0.3$  relative to baseline in LogMAR were reported in this endpoint. The safety set consisted of all subjects who received at least 1 dose of study drug and had at least 1 post-treatment assessment, which may have included death. Subjects were analysed according to treatment received. Here, "Number of Subjects Analysed" signifies subjects evaluable for this endpoint.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

AEs = from initiation of study drug through 30 days after last dose of study drug. CSLI: maximum treatment exposure (MTE) of 280 weeks; Phase 3-Triplet: MTE of 277.4 Weeks; Phase 3- Doublet: MTE of 268 Weeks; Phase 3- Control: MTE of 108 Weeks

Adverse event reporting additional description:

An AE is defined as the appearance of (or worsening of any pre-existing) undesirable signs, symptoms, or medical conditions that occur after subject's signed informed consent has been obtained. The safety set consisted of all subjects who received at least 1 dose of study drug & had at least 1 post-treatment assessment, which may have included death.

Assessment type	Non-systematic

subjects affected / exposed	2 / 193 (1.04%)		
occurrences (all)	2		
Ascites			
subjects affected / exposed	4 / 193 (2.07%)		
occurrences (all)	4		
Colitis			
subjects affected / exposed	1 / 193 (0.52%)		
occurrences (all)	1		
Stomatitis			
subjects affected / exposed	45 / 193 (23.32%)		
occurrences (all)	84		
Abdominal pain lower			
subjects affected / exposed	2 / 193 (1.04%)		
occurrences (all)	2		

Skin and subcutaneous tissue disorders			
Dermatitis acneiform			
subjects affected / exposed	77 / 193 (39.90%)		
occurrences (all)	138		
Dry Skin			
subjects affected / exposed	17 / 193 (8.81%)		
occurrences (all)	20		
Rash			
subjects affected / exposed	28 / 193 (14.51%)		
occurrences (all)	55		
Pruritus			
subjects affected / exposed	10 / 193 (5.18%)		
occurrences (all)	12		
Palmar-planar erythrodysesthesia			
subjects affected / exposed	15 / 193 (7.77%)		
occurrences (all)	21		
Rash maculo-papular			
subjects affected / exposed	11 / 193 (5.70%)		
occurrences (all)	14		
Skin fissures			
subjects affected / exposed	13 / 193 (6.74%)		
occurrences (all)	16		
Erythema			
subjects affected / exposed	4 / 193 (2.07%)		
occurrences (all)	4		
Eczema			
subjects affected / exposed	1 / 193 (0.52%)		
occurrences (all)	1		
Skin hyperpigmentation			
subjects affected / exposed	2 / 193 (1.04%)		
occurrences (all)	2		
Skin lesion			
subjects affected / exposed	3 / 193 (1.55%)		
occurrences (all)	3		
Pruritus generalised			

subjects affected / exposed	3 / 193 (1.55%)		
occurrences (all)	5		
Alopecia			
subjects affected / exposed	21 / 193 (10.88%)		
occurrences (all)	23		
Hyperkeratosis			
subjects affected / exposed	0 / 193 (0.00%)		
occurrences (all)	0		
Hypertrichosis			
subjects affected / exposed	1 / 193 (0.52%)		
occurrences (all)	1		
Nail disorder			
subjects affected / exposed	2 / 193 (1.04%)		
occurrences (all)	2		
Renal and urinary disorders			
Haematuria			
subjects affected / exposed	4 / 193 (2.07%)		
occurrences (all)	4		
Urinary incontinence			
subjects affected / exposed	2 / 193 (1.04%)		
occurrences (all)	2		
Proteinuria			
subjects affected / exposed	1 / 193 (0.52%)		
occurrences (all)	1		
Pollakiuria			
subjects affected / exposed	0 / 193 (0.00%)		
occurrences (all)	0		
Musculoskeletal and connective tissue disorders			
Back Pain			
subjects affected / exposed	27 / 193 (13.99%)		
occurrences (all)	32		
Pain in extremity			
subjects affected / exposed	2 / 193 (1.04%)		
occurrences (all)	3		
Myalgia			

subjects affected / exposed	4 / 193 (2.07%)		
occurrences (all)	7		
Arthralgia			
subjects affected / exposed	3 / 193 (1.55%)		
occurrences (all)	4		
Musculoskeletal pain			
subjects affected / exposed	5 / 193 (2.59%)		
occurrences (all)	5		
Muscle spasms			
subjects affected / exposed	4 / 193 (2.07%)		
occurrences (all)	7		
Bone pain			
subjects affected / exposed	2 / 193 (1.04%)		
occurrences (all)	5		
Flank pain			
subjects affected / exposed	3 / 193 (1.55%)		
occurrences (all)	6		
Musculoskeletal chest pain			
subjects affected / exposed	2 / 193 (1.04%)		
occurrences (all)	2		
Infections and infestations			
Cystitis			
subjects affected / exposed	1 / 193 (0.52%)		
occurrences (all)	1		
Conjunctivitis			
subjects affected / exposed	3 / 193 (1.55%)		
occurrences (all)	3		
Rash pustular			
subjects affected / exposed	4 / 193 (2.07%)		
occurrences (all)	6		
Paronychia			
subjects affected / exposed	20 / 193 (10.36%)		
occurrences (all)	28		
Urinary tract infection			
subjects affected / exposed	5 / 193 (2.59%)		
occurrences (all)	6		

Nasopharyngitis subjects affected / exposed occurrences (all)	3 / 193 (1.55%) 3		
Upper respiratory tract infection subjects affected / exposed occurrences (all)	10 / 193 (5.18%) 13		
Metabolism and nutrition disorders			
Decreased appetite subjects affected / exposed occurrences (all)	56 / 193 (29.02%) 74		
Hypokalaemia subjects affected / exposed occurrences (all)	25 / 193 (12.95%) 41		
Hypomagnesaemia subjects affected / exposed occurrences (all)	19 / 193 (9.84%) 36		
Hypoalbuminaemia subjects affected / exposed occurrences (all)	6 / 193 (3.11%) 6		
Iron deficiency subjects affected / exposed occurrences (all)	1 / 193 (0.52%) 1		
Hypophosphataemia subjects affected / exposed occurrences (all)	4 / 193 (2.07%) 6		
Hypocalcaemia subjects affected / exposed occurrences (all)	9 / 193 (4.66%) 14		

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Total number of deaths is reported for safety set under Adverse Events section. However, actual number of deaths were, for combined safety lead-in: 30; for Phase 3: Triplet arm: 209; for Phase 3: Doublet arm: 193 and for Phase 3: Control arm: 198.
