

Clinical trial results:

A Phase II, Randomized, Multi-Center, Double-Blind, Placebo Controlled Study to Evaluate the Efficacy and Safety of BMS-931699 (Iulizumab) or BMS-986142 in Subjects with Moderate to Severe Primary Sjogren's Syndrome

Summary

EudraCT number	2016-000101-37
Trial protocol	GR IT
Global end of trial date	24 July 2017

Results information

Result version number	v1 (current)
This version publication date	09 August 2018
First version publication date	09 August 2018

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	24 July 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	24 July 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this trial was to evaluate the efficacy of treatment with either lulizumab or BMS-986142 versus placebo in subjects with moderate to severe pSS as measured by the change from baseline in EULAR SS Disease Activity Index (ESSDAI) at Week 12 between active treatment arms (lulizumab or BMS-986142, respectively) and the placebo arm

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization Good Clinical Practice Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	25 October 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Russian Federation: 1
Country: Number of subjects enrolled	Mexico: 10
Country: Number of subjects enrolled	Puerto Rico: 2
Country: Number of subjects enrolled	United States: 4
Country: Number of subjects enrolled	Peru: 1
Worldwide total number of subjects	18
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	15
From 65 to 84 years	3
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

45 subjects enrolled, 18 subjects were randomized/treated. 15 subjects didn't complete the treatment period. The study was terminated and the remaining 15 randomized subjects who had not yet completed the double-blind period entered the follow-up period. Of the 15 subjects who entered the follow-up period, 12 did not complete the follow-up period

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	BMS-931699/lulizumab injection

Arm description:

(12.5mg/vial, 12.5mg/mL) for subcutaneous (SC)

Arm type	Experimental
Investigational medicinal product name	Lulizumab
Investigational medicinal product code	
Other name	BMS-931699
Pharmaceutical forms	Injection
Routes of administration	Intravenous use

Dosage and administration details:

Subcutaneous weekly injection

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subcutaneous weekly injection + daily oral placebo tablets

Arm title	BMS-986142 50 mg tablet (round) or 150 mg tablet (oval)
------------------	---

Arm description:

For oral administration, 350 mg

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravenous use

Dosage and administration details:

Daily oral tablets + subcutaneous placebo (weekly) injection

Investigational medicinal product name	BMS-986142
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Daily oral tablets + subcutaneous placebo (weekly) injection

Arm title	Placebo
------------------	---------

Arm description:

For BMS-986142 50 mg tablet (round) or 150 mg tablet

Arm type	Placebo

Primary: Mean change from baseline in ESSDAI

End point title	Mean change from baseline in ESSDAI ^[1]
End point description: The ESSDAI is a clinical index that measures Sjogren's syndrome disease activity. A physician scores the disease activity level of twelve organ-specific domains in 3 or 4 levels according to their severity. For example, for no disease activity the domain score equals 0 and for high disease activity the domain score equals 3 or 4. Each domain is assigned a weight between 1 and 6, and the domain score is multiplied by the domain weight. The sum of the weighted domain scores is the overall score, which can range from 0 to 123. A higher score indicates more disease activity. Change from baseline was computed as the value at Week 24 minus the baseline value. A negative value in change from baseline indicates an improvement and a positive value indicates worsening	
End point type	Primary
End point timeframe: At baseline and week 12	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: No summary statistics were planned.

Secondary: Mean change from baseline in short Form-36 (SF-36)

End point title Mean change from baseline in short Form-36 (SF-36)

End point description:

First, precoded numeric values are recoded per the scoring key given in Table 1. Note that all items are scored so that a high score defines a more favorable health state. In addition, each item is scored on a 0 to 100 range so that the lowest and highest possible scores are 0 and 100, respectively. Scores represent the percentage of total possible score achieved. In step 2, items in the same scale are averaged together to create the 8 scale scores. Table 2 lists the items averaged together to create each scale. Items that are left blank(missing data) are not taken into account when calculating the scale scores. Hence, scale scores represent the average for all items in the scale that the respondent answered

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 August 2016	Corrected name of the PatGDA to SubGDA, provided better description of PK analysis for HCQ, clarified several exclusion criteria, removed cryoglobulins, removed requirement to mask local ESR results, added several abbreviations, added references to appendices, corrected secondary outcome of salivary flow to salivary flow rate, corrected typographical & formatting errors in the Notes section of the Flow Chart/Time and Events Schedule (Table 5.1-2), align the pregnancy section of the protocol with requirements in the BMS informed consent form template, and added Appendices for ACR-EULAR Classification Criteria for Primary Sjögren's Syndrome, as well as for all rating scales and PROs
13 February 2017	Added preliminary information regarding two drug-drug interaction studies for BMS-986142 and clarified guidance around certain concomitant medications related to those studies, including removal of hormone-eluting intrauterine devices (IUDs) as an allowable method of highly-effective contraception, changed the duration of male contraception from 90 days to 35 days posttreatment completion, removed the 7 year limitation on the diagnosis of Sjögren's syndrome for study inclusion, clarified exclusion criteria regarding the severity of pSS complications, added guidance around the use of additional eye preparations during the study, clarified physical examination requirements, clarified the duration of post-study follow-up, clarified when BMS-986142 or matching placebo and hydroxychloroquine (if applicable) should be brought to the investigational site for administration, clarified that all routine safety labs should be performed after a 10 hour fast, removed the Day 29/Week 4 HCQ intensive PK assessment, clarified when a serum pregnancy test is needed, updated the reference information for the ACR-EULAR Classification Criteria for Primary Sjögren's Syndrome, to note that the paraffin wax method of stimulated salivary flow is the preferred method over moistened gauze, clarified the materials provided, clarified site processing instructions for optional biopsy samples, and corrected typographical errors

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
