

## Clinical trial results:

### Clinical efficacy and mechanistic evaluation of Eplerenone for Central serous chorio-retinopathy – the VICI randomised trial.

#### Summary

EudraCT number	2016-000113-70
Trial protocol	GB
Global end of trial date	03 June 2019

#### Results information

Result version number	v1 (current)
This version publication date	12 July 2020
First version publication date	12 July 2020

#### Trial information

##### Trial identification

Sponsor protocol code	NA
-----------------------	----

##### Additional study identifiers

ISRCTN number	ISRCTN92746680
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	University Hospital Southampton NHS Foundation Trust
Sponsor organisation address	SGH - Level E, Laboratory and Pathology Block, SCBR - MP 138, Southampton, United Kingdom, SO16 6YD
Public contact	CTEU Bristol, CTEU Bristol, 0117 342 2374, vici-trial@bristol.ac.uk
Scientific contact	CTEU Bristol, CTEU Bristol, 0117 342 2374, vici-trial@bristol.ac.uk

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 November 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	03 June 2019
Global end of trial reached?	Yes
Global end of trial date	03 June 2019
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To evaluate whether vision following eplerenone therapy alongside usual care is superior to placebo with usual care in eyes with chronic Central serous chorio-retinopathy.

Protection of trial subjects:

All potential participants were sent or given an invitation letter and patient information sheet (PIS) (approved by the local Research Ethics Committee,(REC)) describing the study. The patient had time to read the PIS and to discuss their participation with others outside the research team (e.g. relatives or friends) if they wished. Full informed consent was obtained for every trial participant. The patient's GP was informed of their participation in the trial. All members of the direct healthcare team are contractually bound to abide by standard NHS conditions of confidentiality and the need to access medical records will be explained to each patient during the process of obtaining consent.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 December 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 114
Worldwide total number of subjects	114
EEA total number of subjects	114

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	114
From 65 to 84 years	0

85 years and over	0
-------------------	---

## Subject disposition

### Recruitment

Recruitment details:

Of the 223 patients initially eligible, 114 gave written informed consent and were randomised.

### Pre-assignment

Screening details:

Between December 2016 and February 2018, 402 patients were screened. During the initial eligibility screening stage 97 patients were found to be ineligible. Eighty-two initially eligible patients were not approached for consent. Of patients who were eligible and given a PIL, 44 declined to consent.

### Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject, Assessor

Blinding implementation details:

Masking was implemented by over-encapsulation of the eplerenone/placebo to produce identical capsules. Capsules were supplied in bottles with identical labelling except for a unique bottle number. Bottle numbers were assigned against an allocation list. Only personnel at the manufacturing pharmacy and the trial database manager had access to the allocation list for the purposes of producing and managing the IMP.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo with usual care

Arm description:

Placebo tablet, manufactured to match the Eplerenone tablets, with usual care.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Same regimen as for intervention

<b>Arm title</b>	Eplerenone with usual care
------------------	----------------------------

Arm description:

Eplerenone 25 mg/day increased to 50 mg/day after 1 week (as per manufacturer's recommendations for dose initiation) in addition to usual care. Treatment will be continued until there is evidence of complete resolution of sub-retinal fluid.

Arm type	Experimental
Investigational medicinal product name	Eplerenone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Eplerenone 25 mg/day increased to 50 mg/day after 1 week (as per manufacturer's recommendations for dose initiation) in addition to usual care. Treatment will be continued until there is evidence of complete resolution of SRF. The 25mg and 50mg doses will be achieved using 25mg and 50mg strength tablets respectively.

<b>Number of subjects in period 1</b>	Placebo with usual care	Eplerenone with usual care
Started	57	57
Completed	57	57

median (confidence interval 95%)	192.1 (136.6 to 247.6)	182.5 (117.7 to 247.3)		

## Statistical analyses

<b>Statistical analysis title</b>	Time to recurrence of SRF
Comparison groups	Placebo with usual care v Eplerenone with usual care

Number of subjects included in analysis	42
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.836
Method	Interval-censored regression
Parameter estimate	Hazard ratio (HR)
Point estimate	1.1
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.45
upper limit	2.66
Variability estimate	Standard error of the mean
Dispersion value	0.48

## Statistical analyses

<b>Statistical analysis title</b>	Choroidal thickness in fellow eye
Comparison groups	Placebo with usual care v Eplerenone with usual care
Number of subjects included in analysis	104
Analysis specification	Post-hoc
Analysis type	superiority <sup>[2]</sup>
P-value	= 0.056
Method	Mixed models analysis
Parameter estimate	Mean difference (final values)
Point estimate	30.05
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.48
upper limit	60.58
Variability estimate	Standard error of the mean
Dispersion value	15.57

Notes:

[2] - Multiple imputation used to account for missing data

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Up to 12 months post-randomisation

Adverse event reporting additional description:

All expected and unexpected adverse events reported using MedDRA dictionary.

For all events, 'non-serious adverse events' includes ALL events (serious and non-serious). This is consistent with the trial publication.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	22.1
--------------------	------

### Reporting groups

Reporting group title	Placebo with usual care
-----------------------	-------------------------

Reporting group description:

Placebo tablet, manufactured to match the Eplerenone tablets, with usual care.

Reporting group title	Eplerenone with usual care
-----------------------	----------------------------

Reporting group description:

Eplerenone 25 mg/day increased to 50 mg/day after 1 week (as per manufacturer's recommendations for dose initiation) in addition to usual care. Treatment will be continued until there is evidence of complete resolution of sub-retinal fluid.

Serious adverse events	Placebo with usual care	Eplerenone with usual care	
Total subjects affected by serious adverse events			
subjects affected / exposed	3 / 57 (5.26%)	0 / 57 (0.00%)	
number of deaths (all causes)	0	0

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 June 2016	<p>The trial schema and data collection table have been updated due to inconsistencies in the previous version of the protocol. Time frames for study visits have been added.</p> <p>Coordinating centre will also have code lists for unmasking.</p> <p>OCT images will only be graded by an independent reading centre at baseline and 12 months.</p> <p>Updated exclusion criteria, only patients receiving a combination of an ACE inhibitor and an ARB are excluded.</p> <p>The following exclusion criteria has been added due to guidance in the SmPC 'Patients receiving high doses of Aspirin (&gt;75mg).'</p> <p>Randomisation must take place within one month of taking screening blood tests.</p> <p>Otherwise screening tests must be repeated</p>
05 October 2016	<p>Detail added to say that optometrists are allowed logs of previous refractions when carrying out visual function assessments.</p> <p>The following inclusion criterion has been added: 'Investigator believes that there is sufficient evidence from patient history, case note documentation or appearance of the macula that CSCR has been present for at least 4 months.'</p> <p>Patients with BCVA scores of up to 85 are now eligible for inclusion.</p> <p>Concomittant medication list has been updated.</p> <p>Lists of primary and secondary outcomes have been edited.</p> <p>OCT A is to performed where equipment is available at screening and 12 months.</p> <p>Unmasking requires approval from CI/Co-Lead.</p> <p>Analyses section has been updated based on feedback from DMSC meeting.</p>
26 January 2017	<p>Correction to say that VICI is a phase 3 trial not a phase 2 trial</p> <p>Fundus photography has been added to the trial schema and data collection table. This procedure will be carried out twice (screening &amp; 12 month follow up visit) and takes around 5 minutes. This had been omitted in error from previous versions of the protocol.</p> <p>We are not measuring fasting blood glucose. This had been removed from the trial schema before the protocol was submitted for approval but in error not removed from section 9.2 of the study protocol.</p>
20 March 2018	<p>Section 4.7. Updated minor text error in sample size justification.</p> <p>Sections 5.3, 6.2 and Table 1. Updated to include OCT-A at baseline or an interim time-point and at 12 months.</p> <p>Section 8.1. Updated reference safety information.</p>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

None reported
