Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000311-PIP01-08
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 October 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	06 October 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study was to evaluate the efficacy and safety of ustekinumab in pediatric subjects greater than or equal to (\geq) 6 years to less than ($<$) 12 years of age with moderate to severe chronic plaque psoriasis.

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with Good Clinical Practices and applicable regulatory requirements. Safety evaluations were based on the incidence and type of adverse events (AEs), laboratory analyte values, vital sign measurements, physical examinations, concomitant medication review, injection-site reactions, allergic reactions, tuberculosis evaluations reported during the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	07 June 2016
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	52 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 4
Country: Number of subjects enrolled	Canada: 2
Country: Number of subjects enrolled	Germany: 7
Country: Number of subjects enrolled	Hungary: 10
Country: Number of subjects enrolled	Netherlands: 1
Country: Number of subjects enrolled	Poland: 12
Country: Number of subjects enrolled	United States: 8
Worldwide total number of subjects	44
EEA total number of subjects	34

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age $<$ 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	44
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 52 subjects were screened, of which 44 subjects were enrolled in the study and 39 subjects completed the main study period. 28 subjects entered the long-term extension period.

Period 1

Period 1 title	Ustekinumab Standard Dosage (Main Study)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Ustekinumab Standard Dosage (Main Study)
-----------	--

Arm description:

Subjects received ustekinumab standard weight-based dose at Weeks 0 and 4 followed by every 12 weeks (q12w) dosing up to Week 40. Ustekinumab was administered as subcutaneous (SC) injections of 0.75 milligrams per kilogram (mg/kg) for subjects with weight less than (<) 60 kilograms (kg), 45 mg for subjects with weight greater than or equal to (\geq) 60 kg to less than or equal to (\leq) 100 kg, and 90 mg for subjects with weight >100 kg. Subjects had a safety follow-up till Week 56.

Arm type	Experimental
Investigational medicinal product name	Ustekinumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Cutaneous liquid
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received weight-based dose of ustekinumab as SC injections at Week 0 and 4 followed by q12w dosing up to Week 40.

Number of subjects in period 1	Ustekinumab Standard Dosage (Main Study)
Started	44
Completed	41
Not completed	3
Lack of efficacy	1
Protocol deviation	2

Period 2

Period 2 title	Ustekinumab Standard Dosage (LTE)
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Ustekinumab Standard Dosage (Long-term extension [LTE])
------------------	---

Arm description:

Subjects who had a beneficial response from Ustekinumab treatment continued receiving ustekinumab weight based dose in a every 12 weeks (q12w) regimen from Week 56 onwards until commercially available or up to Week 264. Ustekinumab was administered as SC injections of 0.75 mg/kg for subjects with weight <60 kg, 45 mg for subjects with weight >=60 kg to <=100 kg, and 90 mg for subjects with weight >100 kg.

Arm type	Experimental
Investigational medicinal product name	Ustekinumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Cutaneous liquid
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received weight-based dose of ustekinumab as SC injections at Week 56 followed by q12w dosing until commercially available or up to Week 264.

Number of subjects in period 2^[1]	Ustekinumab Standard Dosage (Long-term extension [LTE])
Started	28
Completed	0
Not completed	28
Trial site terminated by sponsor	1
Other	1
LTE protocol-specified criteria 9.1.5	22
Lost to follow-up	1
Withdrawal by subject	3

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: The number of subjects starting the long-term extension (LTE) period is different from the main study period as per study design because only few subjects entered the LTE period.

Baseline characteristics

Reporting groups

Reporting group title	Ustekinumab Standard Dosage (Main Study)
-----------------------	--

Reporting group description:

Primary: Percentage of Subjects With Physician's Global Assessment (PGA) Score of Cleared (0) or Minimal (1) at Week 12

End point title	Percentage of Subjects With Physician's Global Assessment (PGA) Score of Cleared (0) or Minimal (1) at Week 12 ^[1]
-----------------	---

End point description:

The PGA is used to determine the subject's psoriasis at a given time point. Overall lesions are graded for induration, erythema, and scaling. The subject's psoriasis was assessed as cleared (0), minimal (1), mild (2), moderate (3), marked (4), or severe (5). Higher scores indicated worse disease. Analysis set: Full analysis set (FAS), consisted of all enrolled and treated participants who received at least 1 injection of ustekinumab (partial or complete). Treatment Failure (TF) criteria: discontinued study agent due to lack of efficacy or adverse event (AE) of worsening of psoriasis or who started protocol-prohibited medication/therapy. Participants who met TF criteria prior to Week 12 or with missing data at Week 12 were considered non-responders at Week 12.

End point type	Primary
----------------	---------

End point timeframe:

Week 12

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive statistics was done, no inferential statistical analysis was performed.

End point values	Ustekinumab Standard Dosage (Main Study)			
Subject group type	Reporting group

Secondary: Percentage of Subjects who Achieved Psoriasis Area and Severity Index (PASI) 75 Response at Week 12

End point title	Percentage of Subjects who Achieved Psoriasis Area and Severity Index (PASI) 75 Response at Week 12
-----------------	---

End point description:

PASI system is used for assessing and grading the severity of psoriatic lesions and their response to therapy. The body is divided into 4 regions: head, trunk, upper and lower extremities. Each of these areas is assessed separately for the percentage of area involved and gives a numeric score ranging from 0 (no involvement) to 6 (90%-100% involvement). For erythema, induration, and scaling, which are each rated on a scale of 0 (None) to 4 (very severe). PASI produces a numeric score ranging from 0 (no psoriasis) to 72 (disease severity). Higher score indicates more severe disease. Subjects with ≥ 75 % improvement in PASI from Baseline were considered PASI 75 responders. Analysis set: FAS. TF criteria- discontinued study agent due to lack of efficacy or AE of worsening of psoriasis or who started protocol-prohibited medication/therapy. Subjects who met TF criteria prior to Week 12 or with missing data at Week 12 were considered non-responders at Week 12.

Secondary: Change from Baseline in Children Dermatology Life Quality Index (CDLQI) Score at Week 12

End point title	Change from Baseline in Children Dermatology Life Quality Index (CDLQI) Score at Week 12
-----------------	--

End point description:

CDLQI was used to assess the impact of psoriasis on subject health-related quality of life. The CDLQI has 10 items assessing health-related quality of life (HRQOL) in subjects with skin disease each measured on a scale from 0 (Not at all) to 3 (Very much). The total score ranges from 0 to 30, with lower scores indicating better quality of life. The higher the score, the greater the impairment in quality of life (QoL). Analysis set: FAS. TF criteria- discontinued study agent due to lack of efficacy or AE of worsening of psoriasis or who started protocol-prohibited medication/therapy. For subjects meeting one or more TF criteria, were considered to have 0 improvement from baseline. Here "N" (number of subjects analyzed) signifies subjects who were evaluable for this outcome measure at both baseline and Week 12.

The total score ranges from 0 to 30. The higher the score, the greater the impairment in quality of life (QoL). Analysis set: FAS. TF criteria-discontinued study agent due to lack of efficacy or AE of worsening of psoriasis or who started protocol-prohibited medication/therapy. Subjects who met TF criteria prior to Week 12 were assigned 0 change. 'n' (number analyzed): subjects evaluated at given timepoints.

End point title	Percentage of Subjects Achieving a PGA Score of Cleared (0), Cleared (0) or Minimal (1), Mild or Better (≤ 2) at Weeks 80, 104, 128, 152 and 176
-----------------	---

End point description:

The PGA is used to determine the subject's psoriasis at a given time point. Overall lesions are graded for induration, erythema, and scaling. The subject's psoriasis was assessed as cleared (0), minimal (1), mild (2), moderate (3), marked (4), or severe (5). Higher scores indicated worse disease. Analysis set: FAS; all subjects enrolled in the LTE who received at least an injection of ustekinumab at Week 56 (partial or complete). Here "N" (number of subjects analyzed) signifies subjects who were evaluable for this endpoint and 'n' (number analyzed): subjects evaluated at given timepoints.

Reporting groups

Reporting group title	Ustekinumab Standard Dosage (Main Study)
-----------------------	--

Reporting group description:

Subjects received ustekinumab standard weight-based dose at Weeks 0 and 4 followed by every 12 weeks (q12w) dosing up to Week 40. Ustekinumab was administered as subcutaneous (SC) injections of 0.75 milligrams per kilogram (mg/kg) for subjects with weight less than (<) 60 kilograms (kg), 45 mg for subjects with weight greater than or equal to (>=) 60 kg to less than or equal to (<=) 100 kg, and 90 mg for subjects with weight >100 kg. Subjects had a safety follow-up till Week 56.

Reporting group title	Ustekinumab Standard Dosage (LTE)
-----------------------	-----------------------------------

Reporting group description:

Subjects who had a beneficial response from Ustekinumab treatment continued receiving ustekinumab weight based dose in a every 12 weeks (q12w) regimen from Week 56 onwards until commercially available or up to Week 264. Ustekinumab was administered as SC injections of 0.75 mg/kg for subjects with weight <60 kg, 45 mg for subjects with weight >=60 kg to <=100 kg, and 90 mg for subjects with weight >100 kg.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 May 2017	The overall reason for this amendment was to allow pediatric subjects who demonstrated clinical benefit through Week 52 of the main study to continue receiving ustekinumab. Additionally, longer-term safety and efficacy data in this patient population was collected.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to the study design, the population was limited in the long-term extension period and decreased over time as subjects met discontinuation criteria and exited the study.
