Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001231-PIP02-13
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 November 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	17 November 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the long term safety of treatment with tolvaptan in a pediatric and adolescent ADPKD population.

Protection of trial subjects:

All study subjects were required to read and sign an Assent Form and subject legal guardians read and signed Informed Consent Form. Written informed consent was freely obtained from all subject's guardian(s) or legally acceptable representative(s), as applicable for local laws.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	23 September 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 32
Country: Number of subjects enrolled	Belgium: 20
Country: Number of subjects enrolled	Germany: 10
Country: Number of subjects enrolled	Italy: 29
Worldwide total number of subjects	91
EEA total number of subjects	91

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	25

Adolescents (12-17 years)	66
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects took part in the study at 18 sites in Belgium, Germany, Italy, and the United Kingdom from 23 September 2016 to 17 November 2021.

Pre-assignment

Screening details:

A total of 91 subjects with autosomal dominant polycystic kidney disease (ADPKD) were randomised into 2 groups in a 1:1 ratio to receive tolvaptan or a matching placebo.

Period 1

Period 1 title	Phase A: Double-blind Period (12 Months)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Phase A: Tolvaptan

Arm description:

Subjects received tolvaptan tablets, orally as a split dose (with the first dose taken upon awakening and the second dose taken approximately 8 hours later), and starting doses based on their weight as per the following specifications: ≥ 20 to < 45 kg: 15/7.5 mg; ≥ 45 to ≤ 75 kg: 30/15 mg; > 75 kg: 45/15 mg, for 1 week. The starting dose was up-titrated (≥ 20 to < 45 kg: 30/15 mg; ≥ 45 to ≤ 75 kg: 45/15 mg; > 75 kg: 60/30 mg) after 1 week based upon tolerability and thereafter subjects continued the same dose for 12 months. Doses may be titrated down dependent upon subject tolerability.

Arm type	Experimental
Investigational medicinal product name	Tolvaptan
Investigational medicinal product code	OPC-41061
Other name	JINARC®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Tolvaptan spray-dried, immediate release tablets

Arm title	Phase A: Placebo
------------------	------------------

Arm description:

Subjects received matching-placebo tablets, orally as a split-dose (with the first dose taken upon awakening and second dose taken approximately 8 hours later), and starting dose based on their weight as per the following specifications: ≥ 20 to < 45 kg: 15/7.5 mg; ≥ 45 to ≤ 75 kg: 30/15 mg; > 75 kg: 45/15 mg, for 1 week. The starting dose was up-titrated (≥ 20 to < 45 kg: 30/15 mg; ≥ 45 to ≤ 75 kg: 45/15 mg; > 75 kg: 60/30 mg) after 1 week based upon tolerability and thereafter subjects continued the same dose for 12 months. Doses may be titrated down dependent upon subject tolerability.

Arm type	Placebo
Investigational medicinal product name	Tolvaptan Matching-placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Tolvaptan matching-placebo tablets

Number of subjects in period 1	Phase A: Tolvaptan	Phase A: Placebo
Started	48	43
Dense Pharmacokinetic/dynamic(PK/PD) Set	12 ^[1]	8 ^[2]
Completed	44	40
Not completed	4	3
Consent withdrawn by subject	3	1
Physician decision	-	2
Adverse event	1	-

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The Dense PK/PD Population included a subset of subjects half on tolvaptan and half on placebo, in the 12 to 17 year old age group who had dense PK sampling after at least 1 month on IMP.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: The Dense PK/PD Population included a subset of subjects half on tolvaptan and half on placebo, in the 12 to 17 year old age group who had dense PK sampling after at least 1 month on IMP.

Period 2

Period 2 title	Phase B: Open-label Period (24 Months)
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Phase B: Prior Tolvaptan

Arm description:

Qualified subjects (defined as those who were willing to continue in the trial and who did not have any adverse events [AEs] that would require investigational medicinal product [IMP] discontinuation) who received tolvaptan and completed Phase A were enrolled in Phase B and received tolvaptan tablets, orally as a split dose (with the first dose taken upon awakening and the second dose taken approximately 8 hours later), and starting dose based on their body weight as per following specifications: ≥ 20 to < 45 kg: 15/7.5 mg; ≥ 45 to ≤ 75 kg: 30/15 mg; > 75 kg: 45/15 mg, for 1 week. The starting dose was up-titrated (≥ 20 to < 45 kg: 30/15 mg; ≥ 45 to ≤ 75 kg: 45/15 mg; > 75 kg: 60/30 mg) after 1 week based upon tolerability and thereafter subjects continued the same dose for 24 months. Doses may be titrated down dependent upon subject tolerability.

Arm type	Experimental
Investigational medicinal product name	Tolvaptan
Investigational medicinal product code	OPC-41061
Other name	JINARC®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Tolvaptan spray-dried, immediate release tablets

Arm title	Phase B: Prior Placebo
------------------	------------------------

Arm description:

Qualified subjects (defined as those who were willing to continue in the trial and who did not have any

AEs that would require IMP discontinuation) who received matching-placebo and completed Phase A, were enrolled in Phase B and received tolvaptan tablets, orally as a split dose (with the first dose taken upon awakening and the second dose taken approximately 8 hours later), based on their current body weight as per following specifications: ≥ 20 to < 45 kg: 15/7.5 mg; ≥ 45 to ≤ 75 kg: 30/15 mg; > 75 kg: 45/15 mg, for 1 week. The starting dose was up-titrated (≥ 20 to < 45 kg: 30/15 mg; ≥ 45 to ≤ 75 kg: 45/15 mg; > 75 kg: 60/30 mg) after 1 week based upon tolerability and thereafter subjects continued the same dose for 24 months. Doses may be titrated down dependent upon subject tolerability.

Arm type	Experimental
Investigational medicinal product name	Tolvaptan
Investigational medicinal product code	OPC-41061
Other name	JINARC®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Tolvaptan spray-dried, immediate release tablets

Number of subjects in period 2^[3]	Phase B: Prior Tolvaptan	Phase B: Prior Placebo
Started	42	39
Completed	36	33
Not completed	6	6
Consent withdrawn by subject	4	3
Reason Not Specified	2	1
Adverse event	-	2

Notes:

[3] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: 2 Phase A: Tolvaptan completers did not enter Phase B. 1 Phase A: Placebo completer did not enter Phase B.

Baseline characteristics

Reporting groups

Reporting group title	Phase A: Tolvaptan
-----------------------	--------------------

Reporting group description:

Subjects received tolvaptan tablets, orally as a split dose (with the first dose taken upon awakening and the second dose taken approximately 8 hours later), and starting doses based on their weight as per the following specifications: ≥ 20 to < 45 kg: 15/7.5 mg; ≥ 45 to ≤ 75 kg: 30/15 mg; > 75 kg: 45/15 mg, for 1 week. The starting dose was up-titrated (≥ 20 to < 45 kg: 30/15 mg; ≥ 45 to ≤ 75 kg: 45/15 mg; > 75 kg: 60/30 mg) after 1 week based upon tolerability and thereafter subjects continued the same dose for 12 months. Doses may be titrated down dependent upon subject tolerability.

Reporting group title	Phase A: Placebo
-----------------------	------------------

Reporting group description:

Subjects received matching-placebo tablets, orally as a split-dose (with the first dose taken upon awakening and second dose taken approximately 8 hours later), and starting dose based on their weight as per the following specifications: ≥ 20 to < 45 kg: 15/7.5 mg; ≥ 45 to ≤ 75 kg: 30/15 mg; > 75 kg: 45/15 mg, for 1 week. The starting dose was up-titrated (≥ 20 to < 45 kg: 30/15 mg; ≥ 45 to ≤ 75 kg: 45/15 mg; > 75 kg: 60/30 mg) after 1 week based upon tolerability and thereafter subjects continued the same dose for 12 months. Doses may be titrated down dependent upon subject tolerability.

Doses may be titrated down dependent upon subject tolerability.	

Primary: Phase A: Change From Baseline in Spot Urine Osmolality (Pre-morning Dose)

End point title	Phase A: Change From Baseline in Spot Urine Osmolality (Pre-morning Dose) ^[1]
End point description: Urine osmolality is a measure of urine concentration, measured by osmometer, which evaluates the freezing point depression of a solution and supplies results as milliosmoles per kilogram of water. Spot urine osmolality was determined for urine samples collected immediately prior to morning dosing for Day 1 (Baseline), and Week 1 for all subjects. Sample was taken after the first morning's void and was provided as a mid-stream, clean catch sample. All subjects were fasting. The Full Analysis Set (FAS) included all subjects who were randomised to a treatment group, received at least 1 dose of the investigational medicinal product (IMP), and had both a Phase A baseline and at least 1 postbaseline efficacy evaluation. n = Number analysed is the number of subjects with data available for analysis at the given time point.	
End point type	Primary
End point timeframe: Baseline, and Week 1 of Phase A	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive statistics was planned to be reported for this endpoint.

Secondary: Phase A: 24-hour Creatinine Clearance

End point title	Phase A: 24-hour Creatinine Clearance
-----------------	---------------------------------------

End point description:

Creatinine is produced from the metabolism of protein, when muscles burn energy. Most creatinine is filtered out of the blood by the kidneys and excreted in urine. The creatinine clearance value is determined by measuring the concentration of endogenous creatinine (that which is produced by the body) in both plasma and urine. Data was categorised and reported based on the total daily dose for the given time point of 0-24 hours. The Dense PK/PD Population included a subset of subjects half on tolvaptan and half on placebo, in the 12 to 17 year old age group who had dense PK sampling after at least 1 month on IMP. Overall number analysed are the number of subjects with data available for analyses. n = Number analysed is the number of subjects with data available for analysis for the specified category. 9999 = The mean or standard deviation was not estimable due to lower number of subjects with event.

Secondary: Phase A and B: Percentage of Subjects With Potentially Clinically Significant Abnormalities in Vital Signs

End point title	Phase A and B: Percentage of Subjects With Potentially Clinically Significant Abnormalities in Vital Signs
-----------------	--

End point description:

Vital signs=measurements of respiratory rate, blood pressure, body temperature and pulse. Any value outside the normal range was flagged for the attention of the investigator who assessed whether or not a flagged value is of clinical significance. Only those categories with at least one subject with event are reported. The Phase A Safety Set included all subjects who were randomized and received at least 1 dose of IMP in Phase A. The Phase B Safety Set included all subjects who were enrolled in Phase B and received at least 1 dose of IMP in Phase B. n=Number analysed is the number of subjects with at least one post-baseline numeric result for the given vital sign parameter. Pulse rate(PR) is measured in beats per minute(BPM), Systolic and Diastolic Blood Pressure (BP) is measured in millimetre of mercury (mmHg). As prespecified in the protocol, data for safety is reported by the treatment group (Phase A: Tolvaptan, Phase A: Placebo, Phase B: Prior Tolvaptan).

Reporting groups

Reporting group title	Phase A: Tolvaptan
-----------------------	--------------------

Reporting group description:

Subjects received tolvaptan tablets, orally as a split dose (with the first dose taken upon awakening and the second dose taken approximately 8 hours later), and starting doses based on their weight as per the following specifications: ≥ 20 to < 45 kg: 15/7.5 mg; ≥ 45 to ≤ 75 kg: 30/15 mg; > 75 kg: 45/15 mg, for 1 week. The starting dose was up-titrated (≥ 20 to < 45 kg: 30/15 mg; ≥ 45 to ≤ 75 kg: 45/15 mg; > 75 kg: 60/30 mg) after 1 week based upon tolerability and thereafter subjects continued the same dose for 12 months. Doses may be titrated down dependent upon subject tolerability.

Reporting group title	Phase A: Placebo
-----------------------	------------------

Reporting group description:

Subjects received matching-placebo tablets, orally as a split-dose (with the first dose taken upon awakening and second dose taken approximately 8 hours later), and starting dose based on their weight as per the following specifications: ≥ 20 to < 45 kg: 15/7.5 mg; ≥ 45 to ≤ 75 kg: 30/15 mg; > 75 kg: 45/15 mg, for 1 week. The starting dose was up-titrated (≥ 20 to < 45 kg: 30/15 mg; ≥ 45 to ≤ 75 kg: 45/15 mg; > 75 kg: 60/30 mg) after 1 week based upon tolerability and thereafter subjects continued the same dose for 12 months. Doses may be titrated down dependent upon subject tolerability.

Reporting group title	Phase B: Prior Tolvaptan
-----------------------	--------------------------

Reporting group description:

Qualified subjects (defined as those who were willing to continue in the trial and who did not have any adverse events [AEs] that would require investigational medicinal product [IMP] discontinuation) who received tolvaptan and completed Phase A were enrolled in Phase B and received tolvaptan tablets, orally as a split dose (with the first dose taken upon awakening and the second dose taken approximately 8 hours later), and starting dose based on their body weight as per following specifications: ≥ 20 to < 45 kg: 15/7.5 mg; ≥ 45 to ≤ 75 kg: 30/15 mg; > 75 kg: 45/15 mg, for 1 week. The starting dose was up-titrated (≥ 20 to < 45 kg: 30/15 mg; ≥ 45 to ≤ 75 kg: 45/15 mg; > 75 kg: 60/30 mg) after 1 week based upon tolerability and thereafter subjects continued the same dose for 24 months. Doses may be titrated down dependent upon subject tolerability.

Reporting group title	Phase B: Prior Placebo
-----------------------	------------------------

Reporting group description:

Qualified subjects (defined as those who were willing to continue in the trial and who did not have any AEs that would require IMP discontinuation) who received matching-placebo and completed Phase A, were enrolled in Phase B and received tolvaptan tablets, orally as a split dose (with the first dose taken upon awakening and the second dose taken approximately 8 hours later), based on their current body weight as per following specifications: ≥ 20 to < 45 kg: 15/7.5 mg; ≥ 45 to ≤ 75 kg: 30/15 mg; > 75 kg: 45/15 mg, for 1 week. The starting dose was up-titrated (≥ 20 to < 45 kg: 30/15 mg; ≥ 45 to ≤ 75 kg: 45/15 mg; > 75 kg: 60/30 mg) after 1 week based upon tolerability and thereafter subjects continued the same dose for 24 months. Doses may be titrated down dependent upon subject tolerability.
