

Clinical trial results:

ENGOT-EN1/FANDANGO: A randomized phase II trial of first-line combination chemotherapy with nintedanib / placebo for patients with advanced or recurrent endometrial cancer.

Summary

EudraCT number	2016-000193-38
Trial protocol	SE DK DE FI BE FR
Global end of trial date	01 March 2022

Results information

Result version number	v1 (current)
This version publication date	20 October 2023
First version publication date	20 October 2023

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 May 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	20 October 2021
Global end of trial reached?	Yes
Global end of trial date	01 March 2022
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

Primary objective:

To compare Progression free survival (PFS) between arms. Progression Free Survival (PFS) is defined as the time from randomization until disease progression or death by any cause. The progression events are defined by RECIST 1.1 criteria

Protection of trial subjects:

All study subjects were required to read and sign the informed consent form.

The IDMC was established to provide independent review and assessment of the efficacy and safety data in a systematic manner and to safeguard the interest and safety of the participating patients in the study.

The IDMC consisted of 3 independent individuals, and made recommendations to the sponsor, based on their review, to continue or stop the trial based on their assessment of safety information.

The study was conducted in accordance with the ethical principles of the Declaration of Helsinki and the ICH-GCP guidelines. The local principal investigators were responsible for ensuring that the study was conducted in accordance with the protocol, the ethical principles of the Declaration of Helsinki, current ICH guidelines on Good Clinical practice (GCP) and applicable local regulatory requirements.

Background therapy:

Carboplatin AUC 5 Q3W and paclitaxel 175 mg/m² Q3W for up to 6 cycles.

Evidence for comparator: -

Actual start date of recruitment	09 December 2016
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy
Long term follow-up duration	30 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Norway: 8
Country: Number of subjects enrolled	Sweden: 13
Country: Number of subjects enrolled	Belgium: 18
Country: Number of subjects enrolled	Denmark: 15
Country: Number of subjects enrolled	Finland: 9
Country: Number of subjects enrolled	France: 52
Country: Number of subjects enrolled	Germany: 31

Worldwide total number of subjects	146
EEA total number of subjects	146

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	63
From 65 to 84 years	83
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Potential candidates for the trial was identified by a member of the treatment team, by referrals from other departments/hospitals/GP. Investigator screened patients' medical records for suitability to enroll in the trial. Enrollment occurred only after the patient gave written informed consent. Recruitment from Q4 2016 to Q1 2019

Pre-assignment

Screening details:

All patients had to commence treatment within 28 days of start of screening. Patients who failed screening, could be rescreened at a later date, at the Investigators discretion, upon discussion with and approval by sponsor.

Period 1

Period 1 title	Overall period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor

Blinding implementation details:

Nintedanib and placebo treatment was blinded. The study medication was labeled using a unique Kit ID number, which was linked to the randomization scheme. The active and placebo tablets were identical and presented in the same packaging to ensure blinding of the study medication. The treatment assignment was kept separate from the trial team up to database lock.

Arms

Are arms mutually exclusive?	Yes
Arm title	Arm A

Arm description:

Treatment with 1L chemotherapy for endometrial cancer with Paclitaxel/Carboplatin, incl. IMP Nintedanib

Arm type	Experimental
Investigational medicinal product name	Nintedanib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, soft
Routes of administration	Oral use

Dosage and administration details:

200 mg orally twice daily, on day 2-21 of each 21 day cycle

Arm title	Arm B
------------------	-------

Arm description:

Treatment with 1L chemotherapy for endometrial cancer with Paclitaxel/Carboplatin, incl. Placebo

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, soft
Routes of administration	Oral use

Dosage and administration details:

200 mg orally twice daily, on day 2-21 of each 21 day cycle

Number of subjects in period 1	Arm A	Arm B
Started	72	74
End of treatment with nintedanib/placebo	72	74
Completed	0	0
Not completed	72	74
Adverse event, serious fatal	-	1
Consent withdrawn by subject	1	4
Physician decision	10	16
Adverse event, non-fatal	15	7
Intercurrent disease	-	1
Pt. requested to stop	6	2
Lack of efficacy	40	43

End points

End points reporting groups

Reporting group title	Arm A
Reporting group description: Treatment with 1L chemotherapy for endometrial cancer with Paclitaxel/Carboplatin, incl. IMP Nintedanib	
Reporting group title	Arm B
Reporting group description: Treatment with 1L chemotherapy for endometrial cancer with Paclitaxel/Carboplatin, incl. Placebo	
Subject analysis set title	Full analysis set
Subject analysis set type	Full analysis
Subject analysis set description: The full analysis set (FAS) or modified intention-to-treat population comprises all patients receiving at least one dose of study medication irrespective of their further compliance to the planned course of treatment. The FAS is the primary analysis population and will be used for evaluation of all endpoints.	

Primary: Progression Free Survival (PFS)

End point title	Progression Free Survival (PFS)
End point description: Progression Free Survival (PFS) of patients treated with chemotherapy plus Nintedanib against chemotherapy plus placebo. The progression events are defined by RECIST 1.1 criteria. PFS was censored if the patient was lost to follow-up or refused to continue in the study (i.e. withdraws consent). For patients alive and without progression at the time of analysis, PFS was censored. In any case of censoring, the date of censoring will be the last time point documenting survival status.	
End point type	Primary
End point timeframe: Progression Free Survival (PFS) is defined as the time from randomization until disease progression or death by any cause.	

End point values	Arm A	Arm B	Full analysis set	
Subject group type	Reporting group	Reporting group	Subject analysis set	
Number of subjects analysed	72	74	146	
Units: month				
number (confidence interval 95%)	8.23 (5.77 to 10.27)	7.07 (5.40 to 9.10)	7.93 (6.0 to 8.6)	

Statistical analyses

Statistical analysis title	Survival endpoints analyses (PFS)
Statistical analysis description: Survival end-points incl. PFS was tested using a Cox proportional hazard model adjusted for the stratification factors. Visual inspection of the Kaplan-Meier plots were used to ensure that no major deviation from the proportional hazard's assumption was present. If, however, such a deviation was observed the analysis was adapted accordingly.	
Comparison groups	Arm A v Arm B

Number of subjects included in analysis	146
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.05
Method	cox-proportional hazard
Parameter estimate	Cox proportional hazard
Point estimate	0.9981
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.6952
upper limit	1.433
Variability estimate	Standard deviation

Secondary: Overall Survival (OS)

End point title	Overall Survival (OS)
End point description:	
Overall Survival (OS) is defined as the time from start of treatment until date of death by any cause or until the trial was stopped prematurely. Overall survival was censored if the patient was lost to follow-up or refused to continue in the study (i.e. withdraws consent). For patients alive at the time of analysis, overall survival was censored. In any case of censoring, the date of censoring was the last time point documenting survival status.	
End point type	Secondary
End point timeframe:	
Overall Survival (OS) is defined as the time from start of treatment until date of death by any cause or until the trial was stopped prematurely.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

SAEs were collected from inf. consent until 30 days after last dose/study discontinuation. AEs were recorded from 1. dose until treatment discontinuation. AEs were followed for 30 days after last dose of investigational drug.

Adverse event reporting additional description:

AEs could be informed upon spontaneously by the patient or discovered by study staff during physical investigation or when wording open & non-leading questions. Nature of AE, date of onset/resolution, actions taken, severity and causality to study drugs/procedures as assessed by investigator.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 April 2019	Substantial changes to the protocol incl. changes in inclusion and exclusion criteriae, clarification that treatment with radiotherapy will result in EOS, clarification on testing in relation to the trial incl. blood/urin tests, CT-scans. Added GDPR section and specification on when to start the TR-section, will be made, when the primary endpoint is mature. The tissue samples for translational research shall be kept at sites until it is decided to conduct a TR project. Specifikation of TFST, SUSARs.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
