General information about the trial

Main objective of the trial:

This study evaluated the efficacy of atezolizumab given as monotherapy or in combination with platinum-based chemotherapy versus placebo in combination with platinum-based chemotherapy in participants with locally advanced or metastatic urothelial carcinoma who have not received prior systemic therapy.

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 June 2016
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	39 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Subject disposition

Recruitment

Recruitment details:

Participants were enrolled in 221 sites in 35 countries.

Pre-assignment

Screening details:

Stage 1 included atezolizumab+gemcitabine+carboplatin arm or placebo+gemcitabine+carboplatin arm. Participants ineligible for cisplatin-based chemo were enrolled in this stage. Stage 2 included addition of atezolizumab monotherapy arm and allowed participants who were eligible for cisplatin-based chemotherapy.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject

Blinding implementation details:

In the Atezolizumab+Gemcitabine+Carboplatin/Cisplatin arm, participants received blinded atezolizumab plus open-label platinum-based chemotherapy. In the placebo arm, participants received blinded placebo matched to atezolizumab plus open-label platinum-based chemotherapy. In the Atezolizumab Monotherapy arm, eligible participants received open-label atezolizumab as monotherapy.

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo+Gemcitabine+Carboplatin/Cisplatin

Arm description:

Participants received blinded placebo matched to atezolizumab in combination with open-label platinum-based chemotherapy (gemcitabine with either cisplatin or carboplatin).

Arm type	Placebo
Investigational medicinal product name	Carboplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Carboplatin was administered at doses to achieve area under the concentration-time curve (AUC) of 4.5 milligram per milliliter into minute (mg/mL*min) by IV infusion on Day 1 of each 21-day cycle until investigator-assessed disease progression per RECIST v1.1 or unacceptable toxicity.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Placebo matched to atezolizumab was administered by IV infusion on Day 1 of each 21-day cycle until investigator-assessed disease progression per RECIST v1.1. In specific circumstances treatment may continue beyond disease progression.

Investigational medicinal product name	Cisplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:	
Cisplatin was administered at a dose of 70 mg/m ² by IV infusion on Day 1 of each 21-day cycle until investigator-assessed disease progression per RECIST v1.1 or unacceptable toxicity.	
Investigational medicinal product name	Gemcitabine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use
Dosage and administration details:	
Gemcitabine was administered at a dose of 1000 milligrams per square meter (mg/m ²) by IV infusion on Day 1 and Day 8 of each 21-day cycle, until investigator-assessed disease progression per RECIST v1.1 or unacceptable toxicity.	
Arm title	Atezolizumab+Gemcitabine+Carboplatin/Cisplatin

Participants received blinded atezolizumab in combination with open-label platinum-based chemotherapy (gemcitabine with either cisplatin or carboplatin).	
Arm type	Experimental
Investigational medicinal product name	Atezolizumab
Investigational medicinal product code	
Other name	Tecentriq
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use
Dosage and administration details:	
Atezolizumab was administered at a fixed dose of 1200 milligrams (mg) by intravenous (IV) infusion on Day 1 of each 21-day cycle until investigator-assessed disease progression per RECIST v1.1. In specific circumstances treatment may continue beyond disease progression.

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 September 2016	Protocol has been amended to include the addition of a third treatment arm to the study of atezolizumab as monotherapy. The study design was modified to include participants who were eligible for a cisplatin-containing regimen. Participants who were ineligible for cisplatin were continued to be enrolled. A primary efficacy objective was added: To evaluate the efficacy of atezolizumab monotherapy compared with placebo plus platinum-based chemotherapy on the basis of OS. A secondary efficacy objective was added: Investigator-assessed PFS in participants treated with atezolizumab monotherapy compared with participants treated with placebo plus platinum-based chemotherapy.
30 April 2018	Protocol has been amended to reflect that randomization of new participants to all three arms will continue in a 1:1:1 manner regardless of PD-L1 expression status; however, for participants randomized to Atezolizumab monotherapy arm, PD-L1 expression status will be unblinded to the investigator and participants at the time of randomization. The protocol has been updated to reflect the following treatment options for new participants randomized to Atezolizumab Monotherapy arm: PD-L1 status will be unblinded to the investigator and participant at the time of randomization. Participants with a PD-L1 expression status of IC2/3 will receive atezolizumab monotherapy. Participants with a PD-L1 expression status of IC0 or IC1 will receive open-label atezolizumab plus platinum (carboplatin or cisplatin) and gemcitabine chemotherapy instead of atezolizumab monotherapy. Participants with PD-L1 expression status of IC0 or IC1 are recommended to continue with atezolizumab monotherapy and participants with PD-L1 expression status of IC2/3 will continue receiving atezolizumab monotherapy. Secondary Efficacy Objective has been updated to reflect the addition of an Independent Review Facility-progression-free survival (PFS) endpoint, defined as the time from randomization to the first documented disease progression as determined by blinded independent central review with use of RECIST v1.1, or death due to any cause, whichever occurs first.
