Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 January 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	10 January 2018
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The objective of this study is to evaluate the long-term safety and efficacy of Ace-ER treatment in subjects with glucosamine (UDP-N-acetyl)-2-epimerase myopathy (GNEM).

Protection of trial subjects:

The trial was designed, conducted, recorded, and reported in accordance with the principles established by the 18th World Medical Association General Assembly (Helsinki, 1964) and subsequent amendments and clarifications adopted by the General Assemblies. The investigators made every effort to ensure that the study was conducted in full conformance with Helsinki principles, International Council for Harmonization (ICH) Good Clinical Practice (GCP) guidelines, current Food and Drug Administration (FDA) regulations, EU Clinical Trial Directive 2001/20/EC, and local ethical and regulatory requirements. Each investigator was thoroughly familiar with the appropriate administration and potential risks of administration of the study drug, as described in the protocol and Investigator's Brochure, prior to the initiation of the study. The method of obtaining and documenting informed consent and the contents of the informed consent form (ICF) complied with ICH GCP guidelines, the requirements of 21 CFR Part 50, "Protection of Human Subjects," the Health Insurance Portability and Accountability Act regulations, and all other applicable regulatory requirements. Investigators were responsible for preparing the ICF and submitting it to the Sponsor for approval prior to submission to the Institutional Review Board (IRB). All ICFs were written in regional language and contained the minimum elements for consent as mandated by the ICH guidelines. An IRB-approved ICF was provided by the Sponsor prior to initiation of the study. Investigators obtained signed written informed consent from each potential study subject prior to the conduct of any study procedures and after the methods, objectives, requirements, and potential risks of the study were fully explained to each potential subject. Consent for participation could be withdrawn at any time for any reason by the subject.

Actual start date of recruitment	02 May 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 55
Country: Number of subjects enrolled	United Kingdom: 18
Country: Number of subjects enrolled	Bulgaria: 10
Country: Number of subjects enrolled	France: 10
Country: Number of subjects enrolled	Italy: 11
Country: Number of subjects enrolled	Israel: 30
Country: Number of subjects enrolled	Canada: 9

Worldwide total number of subjects	143
EEA total number of subjects	49

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	141
From 65 to 84 years	2
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

143 subjects were screened and enrolled across 14 total sites in the United States, Israel, United Kingdom, Italy, France, Canada, and Bulgaria. 87 subjects rolled over from study UX001-CL301 (NCT02377921), 49 subjects rolled over from study UX001-CL202 (NCT01830972), and 7 subjects rolled over from UX001-CL203 (NCT02731690).

Pre-assignment

Screening details: -

Pre-assignment period milestones

Number of subjects started	143
Number of subjects completed	142

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Withdrew consent prior to receiving first dose: 1
----------------------------	---

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Ace-ER 6 g/Day
-----------	----------------

Arm description:

4 tablets (500 mg Ace-ER each for 2 g per dose) orally 3 times per day

Arm type	Experimental
Investigational medicinal product name	Aceneuramic Acid Extended-Release Tablets
Investigational medicinal product code	UX001
Other name	Sialic Acid Extended Release, Ace-ER
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Dose was taken with food (i.e. within 30 minutes after a meal or snack).

Number of subjects in period 1 ^[1]	Ace-ER 6 g/Day
Started	142
Completed	0
Not completed	142
Adverse Event	1
Not Specified	6
Discontinuation of Study by Sponsor	134
Withdrawal by Subject	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 1 subject withdrew consent prior to receiving the first dose and is accounted for in preassignment details.

Baseline characteristics

White	111	111	
Asian	19	19	
Other, Not Specified	12	12	
Hand Held Dynamometry (HHD) Upper Extremity Composite Score (UEC)			
Hand held dynamometry testing was used to measure strength. The maximum voluntary isometric contraction against a dynamometer was used to measure bilateral strength in the following muscle groups: shoulder abductors, wrist extensors and knee extensors. Specialized dynamometers for the measurement of grip and key pinch strength were also used. The total force (in kilogram-force [kgf]) for each was recorded.			
Units: kgf			
arithmetic mean			
standard deviation	±	-	
GNEM Functional Activities Scale (GNEM-FAS) Mobility Score			
GNEM-FAS Expanded Version Mobility subscale score has 13 items and ranges from 0 to 52 with higher scores representing greater mobility.			
Units: score on a scale			
arithmetic mean			
standard deviation	±	-	
GNEM-FAS Expanded Version Upper Extremity Score			
GNEM-FAS Expanded Version Upper Extremity subscale score has 9 items and ranges from 0 to 36 with higher scores representing more skilled, independent use of the arms during functional activity performance.			
Units: score on a scale			

arithmetic mean			
standard deviation	±	-	
HHD Lower Extremity Composite (LEC) Score			
Hand held dynamometry testing was used to measure strength. The maximum voluntary isometric contraction against a dynamometer was used to measure bilateral strength in the following muscle groups: shoulder abductors, wrist extensors and knee extensors. Specialized dynamometers for the measurement of grip and key pinch strength were also used. The total force (in kgf) for each was recorded.			
n=86 subjects in the Full Analysis Set with a baseline assessment for this measure			
Units: kgf			
arithmetic mean			
standard deviation	±	-	
Sit-to-Stand Test			
Lower extremity function was assessed using a sit-to-stand test. The number of times the subject can rise from a seated to a standing position in a 30-second period was recorded.			
Units: stands			
arithmetic mean			
standard deviation	±	-	
30-second Weighted Arm Lift Test			
Upper extremity function was assessed using a weighted arm lift test performed bilaterally. The number of times the subject can raise a 1 kg weight above the head in a 30-second period was recorded.			
n=72 subjects in the Full Analysis Set with a baseline assessment for this measure			
Units: lifts			
arithmetic mean			
standard deviation	±	-	
Six-Minute Walk Test (6MWT)			
The total distance walked (meters) in a 6-minute period was measured.			
n=83 subjects in the Full Analysis Set with a baseline assessment for this measure			
Units: meters			
arithmetic mean			
standard deviation	±	-	
Percent Predicted Meters Walked in 6MWT			
The total distance walked (meters) in a 6-minute period was measured, and the percent predicted distance based on normative data for age and gender was estimated. Predicted 6MWT distance (meters) = $868.8 - (2.99 \times \text{Age}) - (74.7 \times \text{Sex})$, where age is baseline age in years, and sex = 0 for males, and 1 for females.			
n=83 subjects in the Full Analysis Set with a baseline assessment for this measure			
Units: percentage of predicted meters			
arithmetic mean			
standard deviation	±	-	
Total Force in Knee Extensors			
Hand held dynamometry testing was used to measure strength. The maximum voluntary isometric contraction against a dynamometer was used to measure bilateral strength in the following muscle groups: shoulder abductors, wrist extensors and knee extensors. Specialized dynamometers for the measurement of grip and key pinch strength were also used. The total force (in kgf) for each was recorded.			
n=84 subjects in the Full Analysis Set with a baseline assessment for this measure			
Units: kgf			
arithmetic mean			
standard deviation	±	-	
Percent of Predicted Total Force in Knee Extensors			

The percent predicted total force value of lower extremity muscle strength in the knee extensors was determined based on reference equations adjusting for age, gender, height, and weight.

n=81 subjects in the Full Analysis Set with a baseline assessment for this measure

Units: percent of predicted total force			
arithmetic mean			
standard deviation	±	-

Primary: Number of Subjects With Treatment Emergent Adverse Events (TEAEs), Serious AEs (SAEs), and Discontinuations Due to AEs

End point title	Number of Subjects With Treatment Emergent Adverse Events (TEAEs), Serious AEs (SAEs), and Discontinuations Due to AEs ^[1]
End point description: An AE was defined as any untoward medical occurrence associated with the use of a drug, whether or not considered drug related. An SAE or serious suspected adverse reaction is an AE or suspected adverse reaction that at any dose, in the view of either the Investigator or Ultragenyx, results in any of the following outcomes: death; a life-threatening AE; inpatient hospitalization or prolongation of existing hospitalization; persistent or significant incapacity or disability (substantial disruption of the ability to conduct normal life functions); congenital anomaly/birth defect. TEAEs were defined as any AE that occurred after the first dose of study drug. The severity of all AEs were graded using the National Cancer Institute Common Terminology Criteria for Adverse Events (NCI CTCAE) version 4.03: grade 1=mild, grade 2=moderate, grade 3=severe, grade 4=life-threatening, grade 5=death.	
End point type	Primary
End point timeframe: From first dose of study drug through the end of treatment plus 30 days (+5 days). Mean (SD) duration of treatment was ---?	

Notes:

lower limit	-2.96
upper limit	4.4

Notes:

[37] - Baseline is fit into the model as a covariate.

Secondary: Change From Baseline in Percent Predicted Total Force in Knee Extensors Over Time

End point title	Change From Baseline in Percent Predicted Total Force in Knee Extensors Over Time
-----------------	---

End point description:

The percent predicted total force value of lower extremity muscle strength in the knee extensors was determined based on reference equations adjusting for age, gender, height, and weight. Analyzed using a repeated measure GEE model, which includes the baseline value as a covariate.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline, Weeks 8, 16, 24, and 48

End point values	Ace-ER 6 g/Day (Parent Study Treatment: Ace-ER 6 g/Day)	Ace-ER 6 g/Day (Parent Study Treatment: Placebo)		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	44	43		
Units: percent of predicted total force (kgf)				
least squares mean (confidence interval 95%)				
Week 8	-0.98 (-1.78 to -0.19)	-1.17 (-2.44 to 0.09)		
Week 16	-0.59 (-1.48 to 0.31)	-1.25 (-2.43 to -0.07)		
Week 24	-0.70 (-1.92 to 0.53)	-0.85 (-2.53 to 0.83)

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From first dose of study drug through the end of treatment plus 30 days (+5 days). Mean (SD) duration of treatment was ---?

Assessment type	Systematic
-----------------	------------

Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	17.1

Reporting groups

Reporting group title	Ace-ER 6 g/day
-----------------------	----------------

Reporting group description:

4 tablets (500 mg Ace-ER each for 2 g per dose) orally 3 times per day

Serious adverse events	Ace-ER 6 g/day		
Total subjects affected by serious adverse events			
subjects affected / exposed	7 / 142 (4.93%)		
number of deaths (all causes)	0		
number of deaths resulting from adverse events	0		
Investigations			
Biopsy kidney			
subjects affected / exposed	1 / 142 (0.70%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Malignant melanoma in situ			
subjects affected / exposed	1 / 142 (0.70%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Invasive ductal breast carcinoma			
subjects affected / exposed	1 / 142 (0.70%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Gastrointestinal disorders			
Abdominal pain			

subjects affected / exposed	1 / 142 (0.70%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Hepatobiliary disorders			
Cholecystitis acute			
subjects affected / exposed	1 / 142 (0.70%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Renal and urinary disorders			
Renal pain			
subjects affected / exposed	1 / 142 (0.70%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Infections and infestations			
Atypical pneumonia			
subjects affected / exposed	1 / 142 (0.70%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		

Frequency threshold for reporting non-serious adverse events: 5 %

Non-serious adverse events	Ace-ER 6 g/day		
Total subjects affected by non-serious adverse events			
subjects affected / exposed	83 / 142 (58.45%)		
Investigations			
Haemoglobin decreased			
subjects affected / exposed	1 / 142 (0.70%)		
occurrences (all)	1		
Injury, poisoning and procedural complications			
Fall			
subjects affected / exposed	30 / 142 (21.13%)		
occurrences (all)	67		
Laceration			
subjects affected / exposed	5 / 142 (3.52%)		
occurrences (all)	8		
Procedural pain			

subjects affected / exposed	4 / 142 (2.82%)		
occurrences (all)	7		
Skin abrasion			
subjects affected / exposed	7 / 142 (4.93%)		
occurrences (all)	8		
Nervous system disorders			
Dizziness			
subjects affected / exposed	5 / 142 (3.52%)		
occurrences (all)	6		
Extensor plantar response			
subjects affected / exposed	1 / 142 (0.70%)		
occurrences (all)	1		
Headache			
subjects affected / exposed	8 / 142 (5.63%)

Infections and infestations			
Nasopharyngitis			
subjects affected / exposed	8 / 142 (5.63%)		
occurrences (all)	12		
Upper respiratory tract infection			
subjects affected / exposed	3 / 142 (2.11%)		
occurrences (all)	5		
Urinary tract infection			
subjects affected / exposed	5 / 142 (3.52%)		
occurrences (all)	7		
Viral upper respiratory tract infection			
subjects affected / exposed	6 / 142 (4.23%)		
occurrences (all)	7		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 June 2016	<p>1. The protocol was amended to allow for the inclusion of subjects who complete the UX001-CL202 study. This change affected multiple sections of the protocol, including the synopsis, Table 2.1, and Inclusion Criterion 1 (Section 7.3.1). Subjects enrolling from the UX001-CL202 study will follow the same schedule of events as subjects who roll over from the UX001-CL301 study.</p> <p>2. With regard to Change #1 above, the amendment clarifies that subjects who rollover from UX001-CL202 will receive 6 g/day of Ace-ER. No subjects will receive 12 g/day in this study.</p> <p>3. Treatment duration language changed to remove "until commercial availability of study drug in subject's region." This change affected multiple sections of the protocol, including Synopsis, Figure 2.1 and Section 7. The treatment duration on the study will be 24 Months.</p> <p>4. Table 7.5.5.5.1 was updated to include blood/RBC and leukocyte esterase to the urinalysis panel and to add a footnote indicating that microscopic evaluation will be conducted for abnormal urine test results.</p> <p>5. Language was added to the synopsis and multiple sections of the protocol instructing that for UX001-CL202 subjects, assessments that cannot be safely performed due to disease progression should not be administered.</p> <p>6. The number of samples drawn from each subject (Table 7.5.5.5.1.1) was increased for the serum sialic acid assessments from 2 samples to 5 samples. The total volume of blood sample to be obtained increased from 87 mL to 108 mL for subjects rolling over from UX001-CL203 and from 108 to 129.5 for subjects rolling over from UX001-CL301.</p> <p>7. Record Retention: Section 8.4.3 has been updated to state that all study records must be retained for at least 25 years after the end of the clinical trial or in accordance with national law.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

No efficacy result summaries or analyses were performed for subjects rolling over from UX001-CL202 or UX001-CL203 because of the limited data from those subjects due to the early study closure.

Notes:
