### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

---

**Results analysis stage**

Analysis stage	Final
Date of interim/final analysis	28 June 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	30 May 2018
Was the trial ended prematurely?	Yes

Notes:

---

**General information about the trial**

Main objective of the trial:

To assess the efficacy of bimekizumab in adults with active ulcerative colitis who have not responded to standard therapy.

Protection of trial subjects:

During the conduct of the study all subjects were closely monitored

Background therapy:

Background therapy as permitted in the protocol

Evidence for comparator:

Not applicable

Actual start date of recruitment	01 November 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

## Subject disposition

### Recruitment

Recruitment details:

The study started to enroll patients in November 2016 and concluded in May 2018.

### Pre-assignment

Screening details:

The Participant Flow refers to the Randomized Set.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject, Assessor, Carer

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

Subjects were administered one dose of intravenous (iv) placebo infusion at Visit 2 (Day 1) and 2 doses of subcutaneous placebo (sc) injections at Visit 3 (Day 22  $\pm$  2 days) and Visit 4 (Day 43  $\pm$  2 days).

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	PBO
Other name	PBO
Pharmaceutical forms	Infusion, Injection
Routes of administration	Intravenous use, Subcutaneous use

Dosage and administration details:

Placebo given as an iv infusion at Visit 2 (Day 1) and placebo given as a sc injection at Visit 3 (Day 22  $\pm$  2 days) and Visit 4 (Day 43  $\pm$  2 days).

<b>Arm title</b>	BKZ 560/420 mg
------------------	----------------

Arm description:

Subjects were administered 560 mg of bimekizumab (BKZ) iv infusion at Visit 2 (Day 1) and 2 doses of 420 mg sc BKZ injections at Visit 3 (Day 22  $\pm$  2 days) and Visit 4 (Day 43  $\pm$  2 days).

Arm type	Experimental
Investigational medicinal product name	Bimekizumab
Investigational medicinal product code	UCB4940
Other name	BKZ
Pharmaceutical forms	Infusion, Injection
Routes of administration	Intravenous use, Subcutaneous use

Dosage and administration details:

560 mg of bimekizumab (BKZ) given as a loading dose iv infusion at Visit 2 (Day 1) followed by 420 mg BKZ given by sc injection at Visit 3 (Day 22  $\pm$  2 days) and Visit 4 (Day 43  $\pm$  2 days).

<b>Number of subjects in period 1</b>	Placebo	BKZ 560/420 mg

### Primary: Percentage of Participants with Clinical Response (Per Mayo Score) at Week 8

End point title	Percentage of Participants with Clinical Response (Per Mayo Score) at Week 8 <sup>[1]</sup>
End point description: Clinical Response achieved at Week 8 is defined as a decrease from Baseline in Total Mayo Score of at least 3 points and at least 30 percent (%), with an accompanying decrease in the subscore for Rectal Bleeding of at least 1 point or absolute subscore for Rectal Bleeding of 0 (no blood seen) or 1 (streaks of blood with stool less than half the time). The rectal bleeding score ranges from 0 (no blood seen) to 3 (blood alone passes).	
End point type	Primary
End point timeframe: At Week 8	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Given the lack of Week 8 data, expected at the end of the study (and lack of subjects completing the required dosing regimen), a decision has been made that none of the planned Bayesian analyses would be performed, as they would lack validity, given the data that would be available at the end of the study.

End point description:

An AE is any untoward medical occurrence in a patient or clinical investigation subject administered a pharmaceutical product that does not necessarily have a causal relationship with this treatment. An AE can therefore be any unfavorable and unintended sign (including an abnormal laboratory finding), symptom, or disease temporally associated with the use of a medicinal (investigational) product, whether or not related to the medicinal (investigational) product.

### Secondary: Plasma concentration of Bimekizumab (BKZ) over time - at Day 43, Pre-dose

End point title	Plasma concentration of Bimekizumab (BKZ) over time - at Day 43, Pre-dose
-----------------	---

End point description:

BKZ plasma concentration was expressed as geometric mean concentration and measure in nanograms per millilitre (ng/mL).

Note 1: Values Bellow Limit of Quantification (BLQ) are replaced by value of Lower Limit Of Quantification (LLOQ)/2 (=75ng/mL) in calculations of descriptive statistics.

Note 2: Descriptive statistics were only calculated if at least 2/3 of the concentrations were quantified at the respective timepoint.

End point type	Secondary

End point timeframe:

Day 1 sampling for PK evaluation was done: predose (1h prior dosing), 1h (post infusion), and 5h ( $\pm$ 1h). At Day 22, 43 blood sampling was done prior dosing, at 1.5 and 5 hours after dosing. From Day 57 to Day 183, a single sample was collected.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
03 July 2017	Adjusted the timing for the Screening Visits, revised the washout duration for concomitant medications, and introduced wording for a potential interim analysis and a new stopping rule should the interim analysis be carried out.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Early study termination, due to an imbalance of adverse events with no clear evidence of benefits, resulted in a number of subjects that was too small to enable any definitive conclusions.
