

Clinical trial results:

A Phase II Open-Label Extension Study of Patients Previously Enrolled in Study GA29350 to Evaluate the Long-Term Safety and Efficacy of GDC-0853 in Patients With Moderate to Severe Rheumatoid Arthritis Summary

EudraCT number	2016-000498-19
Trial protocol	BG
Global end of trial date	17 July 2019

Results information

Result version number	v1 (current)
This version publication date	25 July 2020
First version publication date	25 July 2020

Trial information

Trial identification

Sponsor protocol code	GA30067
-----------------------	---------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02983227
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 July 2019
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	17 July 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the long term safety and efficacy of GDC-0853.

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 November 2016
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	2 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 60
Country: Number of subjects enrolled	Bulgaria: 33
Country: Number of subjects enrolled	Brazil: 51
Country: Number of subjects enrolled	Colombia: 22
Country: Number of subjects enrolled	Mexico: 36
Country: Number of subjects enrolled	Poland: 29
Country: Number of subjects enrolled	Russian Federation: 74
Country: Number of subjects enrolled	Serbia: 36
Country: Number of subjects enrolled	Ukraine: 135
Country: Number of subjects enrolled	United States: 20
Worldwide total number of subjects	496
EEA total number of subjects	62

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	442
From 65 to 84 years	54
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 138 centers in 19 countries.

Pre-assignment

Screening details:

496 subjects were enrolled into this OLE study and were included in the ITT and Safety populations.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	GDC-0853 (200mg BID) Cohort 1
------------------	-------------------------------

Arm description:

Subjects received GDC-0853 orally twice daily (BID) for 52 weeks, after completing 12 weeks in Cohort 1 of Study GA29350. Cohort 1 subjects in GA29350 were enrolled with moderate to severe active Rheumatoid Arthritis (RA) and an inadequate response to previous methotrexate (MTX) therapy and then randomized to 12 weeks of GDC-0853 (50 mg daily, 150 mg daily, or 200 mg BID), adalimumab, or placebo.

Arm type	Experimental
Investigational medicinal product name	GDC-0853
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

GDC-0853 was administered twice daily (BID) at a dose of 200mg.

Arm title	GDC-0853 (200mg BID) Cohort 2
------------------	-------------------------------

Arm description:

Subjects received GDC-0853 orally twice daily (BID) for 52 weeks, after completing 12 weeks in Cohort 2 of Study GA29350. Cohort 2 subjects in GA29350 were enrolled with moderate to severe active Rheumatoid Arthritis (RA) and an inadequate response to one or two tumor necrosis factor (TNF) inhibitors and methotrexate (MTX) therapy, and then randomized to 12 weeks of GDC-0853 (200 mg BID) or placebo.

Arm type	Experimental
Investigational medicinal product name	GDC-0853
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

GDC-0853 was administered twice daily (BID) at a dose of 200mg.

Number of subjects in period 1	GDC-0853 (200mg BID) Cohort 1	GDC-0853 (200mg BID) Cohort 2
Started	410	86
Completed	351	72
Not completed	59	14
Adverse event, serious fatal	3	-
Physician decision	3	1
Consent withdrawn by subject	19	8
Adverse event, non-fatal	21	3
Multiple Reasons	2	1
Lost to follow-up	3	-
Lack of efficacy	8	1

End points

End points reporting groups

Reporting group title	GDC-0853 (200mg BID) Cohort 1
-----------------------	-------------------------------

Reporting group description:

Subjects received GDC-0853 orally twice daily (BID) for 52 weeks, after completing 12 weeks in Cohort 1 of Study GA29350. Cohort 1 subjects in GA29350 were enrolled with moderate to severe active Rheumatoid Arthritis (RA) and an inadequate response to previous methotrexate (MTX) therapy and then randomized to 12 weeks of GDC-0853 (50 mg daily, 150 mg daily, or 200 mg BID), adalimumab, or placebo.

Reporting group title	GDC-0853 (200mg BID) Cohort 2
-----------------------	-------------------------------

Reporting group description:

Subjects received GDC-0853 orally twice daily (BID) for 52 weeks, after completing 12 weeks in Cohort 2 of Study GA29350. Cohort 2 subjects in GA29350 were enrolled with moderate to severe active Rheumatoid Arthritis (RA) and an inadequate response to one or two tumor necrosis factor (TNF) inhibitors and methotrexate (MTX) therapy, and then randomized to 12 weeks of GDC-0853 (200 mg BID) or placebo.

Subject analysis set title	GDC-0853 (200mg BID) Cohort 1 (PK-Evaluable Population)
----------------------------	---

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

Subjects received GDC-0853 orally twice daily (BID) for 52 weeks, after completing 12 weeks in Cohort 1 of Study GA29350. Cohort 1 subjects in GA29350 were enrolled with moderate to severe active Rheumatoid Arthritis (RA) and an inadequate response to previous methotrexate (MTX) therapy and then randomized to 12 weeks of GDC-0853 (50 mg daily, 150 mg daily, or 200 mg BID), adalimumab, or placebo. The PK-Evaluable population was defined as all subjects that received any fenebrutinib/GDC-0853 and had sufficient data to enable estimation of key PK parameters. Subjects who received incorrect therapy different from the intended therapy were summarized in the group according to the therapy actually received.

Subject analysis set title	GDC-0853 (200mg BID) Cohort 2 (PK-Evaluable Population)
----------------------------	---

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

Primary: Percentage of Subjects With Adverse Events (AEs)

End point title	Percentage of Subjects With Adverse Events (AEs) ^[1]
-----------------	---

End point description:

An Adverse Event (AE) was considered any unfavorable and unintended sign, symptom, or disease associated with the use of the study drug, whether or not considered related to the study drug. Preexisting conditions that worsened during the study were reported as adverse events.

End point type	Primary
----------------	---------

End point timeframe:

Day 1 up until 8 weeks after the last dose of study drug (up to 1 year, 2 months)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analyses were performed, as this study has only 1 arm.

End point values	GDC-0853 (200mg BID) Cohort 1	GDC-0853 (200mg BID) Cohort 2

End point description:

The DAS28 score is a measure of the patient's disease activity calculated using the tender joint count (TJC) [28 joints], swollen joint count (SJC) [28 joints], patient's global assessment of disease activity [visual analog scale: 0=no disease activity to 100=maximum disease activity] and the erythrocyte sedimentation rate (ESR) for a total possible score of 0 to approximately 10. Scores below 2.6 indicate best disease control and scores above 5.1 indicate worse disease control. DAS28 Remission is defined as a DAS28 score < 2.6. Number of subjects for whom data were actually collected is indicated for each time point. (C1, n=X; C2, n=X) refers to number of subjects analysed in Cohorts 1 and 2 (C1/C2) at each timepoint.

Secondary: Change from Baseline in Simplified Disease Activity Index (SDAI)

End point title	Change from Baseline in Simplified Disease Activity Index (SDAI)
-----------------	--

End point description:

Simplified Disease Activity Index (SDAI) is the numerical sum of five outcome parameters: TJC and SJC (based on a 28-joint assessment), PtGA and PhGA (based on 0-10 cm VAS, where 0 = no disease activity and 10 = worst disease activity), and CRP. SDAI total score ranges from 0 (no disease activity) to 86 (maximal disease activity), where higher scores represents higher disease activity. The SDAI = < 3.3 indicates disease remission, > 3.4 to 11 indicates low disease activity, > 11 to 26 indicates

moderate disease activity, and > 26 indicates high disease activity. Number of subjects for whom data were actually collected is indicated for each time point. (C1, n=X; C2, n=X) refers to number of subjects analysed in Cohorts 1 and 2 (C1/C2) at each timepoint.

Secondary: Change from Baseline in Clinical Disease Activity Index (CDAI)

End point title	Change from Baseline in Clinical Disease Activity Index (CDAI)
-----------------	--

End point description:

CDAI was derived as the sum of the following: tender joint count (TJC), swollen joint count (SJC), participant global assessment (PGA) of disease activity, and physician assessment of disease activity. TJC and SJC were taken as the number of tender and swollen joints, respectively, out of 28 assessed joints. PGA and physician assessment of disease activity were scored 0-100 millimeters (mm) and rounded to the nearest centimeter (cm) on a visual analog scale (VAS), where higher scores indicate greater perceived disease activity. The total CDAI score range was 0-76, where higher scores indicate increased disease activity. Change from baseline at a particular time point was calculated among patients with data available at both baseline and the time point of interest. Negative values indicate improvement/reduction in RA disease activity. (C1, n=X; C2, n=X) refers to number of subjects analysed in Cohorts 1 and 2 (C1/C2) at each timepoint.

Secondary: Change from Baseline in Health Assessment Questionnaire-Disability

Index (HAQ-DI) Score

End point title	Change from Baseline in Health Assessment Questionnaire-Disability Index (HAQ-DI) Score
-----------------	---

End point description:

The Stanford Health Assessment Questionnaire disability index is a patient-reported outcome used to assess difficulty in performing activities of daily living. It consists of 20 questions referring to eight domains: dressing/grooming, arising, eating, walking, hygiene, reach, grip and common daily activities. To respond to each question, a four-level response with higher scores showing larger functional limitations, was chosen. Scoring is as follows with respect to performance of participant's everyday activities: 0 (equals)=without difficulties; 1= with some difficulties; 2=with great difficulties; and 3=unable to perform these actions at all. The composite HAQ-DI score is the mean of the eight domain scores and the score ranges from 0 (no functional impairment) to 3 (maximum functional impairment). A negative change from baseline indicates improvement. (C1, n=X; C2, n=X) refers to number of subjects analysed in Cohorts 1 and 2 (C1/C2) at each timepoint.

End point title	Change from Baseline in 36-Item Short-Form Health Survey (SF-36) Version 2.0 (V2) Scores for Physical and Mental Components
-----------------	---

End point description:

The 36-Item Short Form Health Survey (SF-36v2) is a questionnaire used to assess functional health and well-being and consists of eight domains: Physical Functioning, Role-Physical, Bodily Pain, General Health, Vitality, Social Functioning, Role-Emotional and Mental Health. The SF-36v2 is summarized into Physical Component Summary (PCS) (Phys Comp Sc chnge) and Mental Component Summary (MCS) (Ment Comp Sc chnge) scores. The PCS and MCS scores range from 0 to 100, with 0=worst score (or quality of life) and 100=best score. A positive change from baseline indicates improvement. (C1, n=X; C2, n=X) refers to number of subjects analysed in Cohorts 1 and 2 (C1/C2) at each timepoint.

Secondary: Change from Baseline in Functional Assessment of Chronic Illness Therapy-Fatigue (FACIT-F) Score

End point title	Change from Baseline in Functional Assessment of Chronic Illness Therapy-Fatigue (FACIT-F) Score
-----------------	--

End point description:

The FACIT-Fatigue Scale consists of 13 items designed to measure the degree of fatigue experienced by the patient in the previous 7 days. For each question, there are five possible responses: 0 (not at all), 1 (a little bit), 2 (somewhat), 3 (quite a bit), 4 (very much). A total fatigue score is calculated by summing all items, and possible total scores range from 0 (maximum fatigue) to 52 (no fatigue). A positive change from baseline indicates an improvement in the patient's fatigue (less fatigue). (C1, n=X; C2, n=X) refers to number of subjects analysed in Cohorts 1 and 2 (C1/C2) at each timepoint.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Day 1 up until 8 weeks after the last dose of study drug (up to 1 year, 2 months).

Adverse event reporting additional description:

The Safety-evaluable population was defined as all subjects who received any study drug and had at least one assessment of safety. AEs that were entered into the database at the time of the database lock were included in the AE analysis.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 August 2016	Following updates were made: [1] Updating of background and nonclinical experience with GDC-0853; [2] Clarification of secondary efficacy objective to assess Boolean- and SDAI-based remission; [3] Removal of Week 2 assessments; [4] Updating of rationale for GDC-0853 dose and schedule; [5] Clarification of inclusion criterion for completion of Parent Study GA29350; [6] Updating of storage temperature for GDC-0853; [7] Clarification of Dosing for Day 1; [8] Updating of Labeling of dates on the blister wallets and bottles; [9] Removal of male-specific Informed Consent; [10] Clarification of method of patient-reported (via electronic device) and clinician-reported outcomes (paper based); [11] Addition of Updated nonclinical information and [12] Updating of Management guidelines.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
