Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 July 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	14 June 2019
Global end of trial reached?	Yes
Global end of trial date	14 June 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The key objectives of this trial were the proof of mechanism, support of dose finding, and safety evaluation of different doses of BI 1467335 compared to placebo in patients with clinical evidence of non-alcoholic steato-hepatitis (NASH).

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were to be entered in the study. All subjects were free to withdraw from the clinical trial at any time for any reason given. Close monitoring of all subjects was adhered to throughout the trial conduct. Rescue medication was allowed for all subjects as required.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 June 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Subject disposition

Recruitment

Recruitment details:

This study is a multi-centre, double-blind, parallel-group, randomised, placebo-controlled phase IIa study to investigate safety, tolerability, pharmacodynamics, and pharmacokinetics of different doses of orally administered BI 1467335 (for 12-weeks) compared to placebo in patients with clinical evidence of Non-alcoholic steato-hepatitis (NASH).

Pre-assignment

Screening details:

All subjects were screened for eligibility prior to participation in the trial. Subjects attended a specialist site which ensured that they (the subjects) strictly met all inclusion and none of the exclusion criteria. Subjects were not to be allocated to a treatment group if any of the entry criteria were violated.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Matching placebo taken daily for 12 weeks. Tablets taken orally with water in the morning, fasted, 1 hour before breakfast. Film-coated placebo tablets were supplied. For blinding reasons, all patients took 5 tablets placebo daily.

Arm type	Placebo
Investigational medicinal product name	Matching placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Matching placebo taken daily for 12 weeks. Tablets taken orally with water in the morning before breakfast. Film-coated placebo tablets were supplied. For blinding reasons, all patients took 5 tablets placebo daily.

Arm title	BI 1467335 1 milligram (mg)
------------------	-----------------------------

Arm description:

1 milligram (mg) BI 1467335 taken daily for 12 weeks. Tablets taken orally with water in the morning, fasted, 1 hour before breakfast. Film-coated tablets were supplied as 1 mg and 5 mg dose strengths. For blinding reasons, all patients took 5 tablets verum or placebo daily.

Arm type	Experimental
Investigational medicinal product name	BI 1467335
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

1 milligram (mg) BI 1467335 taken daily for 12 weeks. Tablets taken orally with water in the morning before breakfast. Film-coated tablets were supplied as 1 mg and 5 mg dose strengths. For blinding reasons, all patients took 5 tablets verum or placebo daily.

Arm title	BI 1467335 3 milligram (mg)
------------------	-----------------------------

Arm description:

3 milligram (mg) BI 1467335 taken daily for 12 weeks. Tablets taken orally with water in the morning, fasted, 1 hour before breakfast. Film-coated tablets were supplied as 1 mg and 5 mg dose strengths. For blinding reasons, all patients took 5 tablets verum or placebo daily.

Arm type	Experimental
Investigational medicinal product name	BI 1467335
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

3 milligram (mg) BI 1467335 taken daily for 12 weeks. Tablets taken orally with water in the morning before breakfast. Film-coated tablets were supplied as 1 mg and 5 mg dose strengths. For blinding reasons, all patients took 5 tablets verum or placebo daily.

Arm title	BI 1467335 6 milligram (mg)
------------------	-----------------------------

Arm description:

6 milligram (mg) BI 1467335 taken daily for 12 weeks. Tablets taken orally with water in the morning, fasted, 1 hour before breakfast. Film-coated tablets were supplied as 1 mg and 5 mg dose strengths. For blinding reasons, all patients took 5 tablets verum or placebo daily.

Arm type	Experimental
Investigational medicinal product name	BI 1467335
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

6 milligram (mg) BI 1467335 taken daily for 12 weeks. Tablets taken orally with water in the morning before breakfast. Film-coated tablets were supplied as 1 mg and 5 mg dose strengths. For blinding reasons, all patients took 5 tablets verum or placebo daily.

Arm title	BI 1467335 10 milligram (mg)
------------------	------------------------------

Arm description:

10 milligram (mg) BI 1467335 taken daily for 12 weeks. Tablets taken orally with water in the morning, fasted, 1 hour before breakfast. Film-coated tablets were supplied as 1 mg and 5 mg dose strengths. For blinding reasons, all patients took 5 tablets verum or placebo daily.

Arm type	Experimental
Investigational medicinal product name	BI 1467335
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

10 milligram (mg) BI 1467335 taken daily for 12 weeks. Tablets taken orally with water in the morning before breakfast. Film-coated tablets were supplied as 1 mg and 5 mg dose strengths. For blinding reasons, all patients took 5 tablets verum or placebo daily.

Primary: Plasma amine oxidase copper-containing 3 (AOC3) activity after 12 weeks of treatment, relative to baseline in percent

End point title	Plasma amine oxidase copper-containing 3 (AOC3) activity after 12 weeks of treatment, relative to baseline in percent
End point description: The patient-specific plasma AOC3 activity at time t (24 hours after the last dose in week 12) relative to baseline in percentage was calculated as follows: $\%AOC3at = [(AOC3at - AOC3at,back) / (AOC3abase - AOC3abase,back)] * 100$ with AOC3at the AOC3 activity measured at time t, AOC3at,back the background noise at time t, AOC3abase the AOC3 activity measured at baseline and AOC3abase,back the background noise at baseline. A dose-response relationship was analysed using a non-linear regression model to estimate the daily dosage needed to reach 10% of AOC3 activity (i.e. 90% inhibition) 12 weeks after treatment. Per Protocol Set (PPS): patients who signed informed consent, were treated with at least one dose of the trial medication, without any important protocol deviations leading to exclusion and who had non-missing baseline and at least one non-missing post-baseline and on-treatment measurement on any primary, secondary or further biomarker endpoint.

Comparison groups	Placebo v BI 1467335 1 milligram (mg) v BI 1467335 3 milligram (mg) v BI 1467335 6 milligram (mg) v BI 1467335 10 milligram (mg)
Number of subjects included in analysis	89
Analysis specification	Pre-specified
Analysis type	
P-value	= 0.127 ^[23]
Method	MCPMod Sigmoidal Emax model fit.

Notes:

[23] - p<0.05 is a significant test result (rejecting the null hypothesis of a flat dose-response curve) with alpha 0.05, one-sided.

Secondary: Alkaline phosphatase (AP) after 12 weeks of treatment, relative to baseline in percent

End point title	Alkaline phosphatase (AP) after 12 weeks of treatment, relative to baseline in percent
-----------------	--

End point description:

Alkaline phosphatase (AP) after 12 weeks of treatment, relative to baseline in percent. Number analyzed lower than N in PPS if there is missing data for specific timepoints.

The unit of measure is: percentage relative to baseline = [post baseline (time t)/baseline]*100%

Statistical analyses description: A Mixed effects Model for Repeated Measurements (MMRM) over time including fixed effects for 'base', 'treatment', 'time', 'base*time' interaction, and 'treatment*time' interaction was performed. The MMRM estimates for the treatment effects at Week 12 and the corresponding covariance matrix were used to analyse the dose-response relationship using the Multiple contrast test (MCPMod). A test for non-flat dose-response relationship was first performed. If this relationship could be shown, the best fitting model out of a set of candidate models (Sigmoidal Emax, Logistic, Quadratic, Linear, Exponential, Linear logistic, Emax and Betamod) was to be selected and fitted.

End point type	Secondary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

start of treatment till end of treatment + 28 days, up to 113 days.

Adverse event reporting additional description:

Adverse events are reported based on the Treated Set (all patients who signed the informed consent and were treated with at least one dose of the trial medication).

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 September 2018	Global Amendment 5 (dated 12 Sep 2018): Sample size reduction from 147 to 108 randomised patients due to a lower expected variability for ALT based on new external and blinded internal data

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
