Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	24 June 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	19 September 2018
Global end of trial reached?	Yes
Global end of trial date	31 January 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of the trial was to assess the efficacy of concizumab administered subcutaneously (s.c.) once daily in preventing bleeding episodes in haemophilia A and B patients with inhibitors.

Protection of trial subjects:

The trial was conducted in accordance with the Declaration of Helsinki (64th World Medical Association (WMA) 2013), International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use (ICH) Good Clinical Practice, including archiving of essential documents (2016) and Code of Federal Regulations - Title 21 - Food and Drugs (FDA 21 CFR) 312.120.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	10 August 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects**Subjects enrolled per country**

Country: Number of subjects enrolled	Austria: 2
Country: Number of subjects enrolled	Croatia: 3
Country: Number of subjects enrolled	Denmark: 2
Country: Number of subjects enrolled	Italy: 2
Country: Number of subjects enrolled	Spain: 4
Country: Number of subjects enrolled	Sweden: 1
Country: Number of subjects enrolled	United Kingdom: 1
Country: Number of subjects enrolled	Israel: 1
Country: Number of subjects enrolled	Malaysia: 3
Country: Number of subjects enrolled	Ukraine: 3
Country: Number of subjects enrolled	Japan: 2
Country: Number of subjects enrolled	United States: 2
Worldwide total number of subjects	26
EEA total number of subjects	14

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	26
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The trial was conducted at 17 sites in 12 countries as follows: Austria (1), Croatia (1), Denmark (1), Italy (2), Spain (2), Sweden (1), the United Kingdom (1), Israel (1), Malaysia (2), Ukraine (1), Japan (2) and the United States (2).

Pre-assignment

Screening details:

The trial consisted of two treatment periods: main part which lasted 24 weeks for participants randomised to eptacog alfa and at least 24 weeks for patients randomised to concizumab and an extension part which lasted up to 94 weeks.

Period 1

Period 1 title	Main part
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Concizumab- Main part

Arm description:

Subjects were to receive a subcutaneous (s.c.) injection of concizumab once daily for 24 weeks. The initial dose was 0.15 milligrams per kilogram (mg/kg) and then the dose was escalated to 0.20 and 0.25 mg/kg based on the number of spontaneous bleeding episodes. A loading dose of 0.5 mg/kg was given as the first concizumab dose. A single injection of 90 micrograms per kilogram (μ g/kg) eptacog alfa (rFVIIa) was administered in a non-bleeding state one week after dosing with concizumab had initiated.

Arm type	Experimental
Investigational medicinal product name	Eptacog alfa (activated)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

A single injection of 90 μ g/kg eptacog alfa (rFVIIa) was administered in a non-bleeding state one week after dosing with concizumab had initiated.

Investigational medicinal product name	Concizumab B 100 mg/mL
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects were to receive a s.c. injection of concizumab once daily for 24 weeks. The initial dose was 0.15 mg/kg and then the dose was escalated to 0.20 and 0.25 mg/kg based on the number of spontaneous bleeding episodes. A loading dose of 0.5 mg/kg was given as the first concizumab dose.

Arm title	Eptacog alfa- Main part
------------------	-------------------------

Arm description:

Subjects were to receive eptacog alfa on-demand treatment for 24 weeks.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Eptacog alfa (activated)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder and solvent for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Subjects were to receive eptacog alfa on-demand treatment for 24 weeks.

Started	17	9
Completed	17	8
Not completed	0	1
Consent withdrawn by subject	-	1

Period 2

Period 2 title	Extension part
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Arm title	Concizumab- Extension part
------------------	----------------------------

Arm description:

Subjects who completed main part treatment were to receive a s.c. injection of concizumab once daily for 52-94 weeks. Subjects who received concizumab during the main part were to continue with their treatment at last dose by the end of main part and those received eptacog alfa during the main part were to start their treatment with 0.15 mg/kg of concizumab. The dose was then escalated to 0.20 and 0.25 mg/kg based on the number of spontaneous bleeding episodes. A loading dose of 0.5 mg/kg was given as the first concizumab dose.

Arm type	Experimental
Investigational medicinal product name	Concizumab B 100 mg/mL
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects who completed main part treatment were to receive a s.c. injection of concizumab once daily for 52-94 weeks. Subjects who received concizumab during the main part were to continue with their treatment at last dose by the end of main part and those received eptacog alfa during the main part were to start their treatment with 0.15 mg/kg of concizumab. The dose was then escalated to 0.20 and 0.25 mg/kg based on the number of spontaneous bleeding episodes. A loading dose of 0.5 mg/kg was given as the first concizumab dose.

Number of subjects in period 2	Concizumab- Extension part
Started	25
Completed	22
Not completed	3
Consent withdrawn by subject	1
Physician decision	1
Lack of efficacy	1

Primary: The number of bleeding episodes

End point title	The number of bleeding episodes ^[1]
-----------------	--

End point description:

The number of bleeding episodes that were treated during at least 24 weeks from treatment onset (week 0) are presented. Results are based on the FAS which included all randomised subjects.

End point type	Primary
----------------	---------

End point timeframe:

During at least 24 weeks from treatment onset

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Inferential statistics was not performed.

End point values	Concizumab- Main part	Eptacog alfa- Main part		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	17	9		
Units: Count of episodes	47	77		

Statistical analyses

No statistical analyses for this end point

Secondary: The number of spontaneous bleeding episodes

End point title	The number of spontaneous bleeding episodes
-----------------	---

End point description:

Bleeds that were not linked to a specific, known action or event are called spontaneous bleeding episodes. The number of spontaneous bleeding episodes that were treated during at least 24 weeks from treatment onset (week 0) are presented. The data is presented per the last dose level which the subjects have reached at the time of assessment. Results are based on the FAS which included all randomised subjects.

End point type	Secondary
----------------	-----------

End point timeframe:

During at least 24 weeks from treatment onset

Number of subjects analysed	15	2	9	
Units: Count of episodes	19	5	69	

Statistical analyses

No statistical analyses for this end point

Secondary: Number of treatment emergent adverse events (TEAEs)

End point title	Number of treatment emergent adverse events (TEAEs)
-----------------	---

End point description:

An adverse event (AE) was any untoward medical occurrence in a subject administered a medicinal product, and which does not necessarily had a causal relationship with this treatment. A TEAE was defined as an event that had onset from the first exposure to treatment until the last visit in the trial. Number of TEAEs that occurred during at least 24 weeks from treatment onset (week 0) are presented. The data is presented per the last dose level which the subjects have reached at the time of event. Results are based on the safety analysis set (SAS) included all randomised subjects.

End point type	Secondary
----------------	-----------

End point timeframe:

During at least 24 weeks from treatment onset

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From start of study drug administration (week 0) up to 126 weeks

Adverse event reporting additional description:

Results are based on the safety analysis set which included all randomized subjects.

All presented adverse events are treatment emergent adverse events (TEAEs). TEAE was defined as an event that had onset from the first exposure to treatment (randomisation date, in case of on-demand arm) until the last visit in the trial.

Reporting groups

Reporting group title	Eptacog alfa - Main part
-----------------------	--------------------------

Reporting group description:

Subjects were to receive eptacog alfa on-demand treatment for 24 weeks.

Reporting group title	Concizumab 0.15 mg/kg - Main part
-----------------------	-----------------------------------

Reporting group description:

Subjects received s.c. injection of 0.15 mg/kg concizumab once daily for 24 weeks. A loading dose of 0.5 mg/kg was given as the first concizumab dose.

Reporting group title	Concizumab 0.20 mg/kg - Main part
-----------------------	-----------------------------------

Reporting group description:

Subjects received s.c. injection of concizumab once daily for 24 weeks. The initial dose was 0.15 mg/kg which was then escalated to 0.20 mg/kg based on the number of spontaneous bleeding episodes. A loading dose of 0.5 mg/kg was given as the first concizumab dose.

Reporting group title	Concizumab 0.15 mg/kg - Extension part
-----------------------	--

Reporting group description:

Subjects who were on treatment with concizumab once daily at the end of main part of the study continued their treatment in the extension part. Subjects who received eptacog alfa in the main part switched to treatment with concizumab in the extension part (a loading dose of 0.5 mg/kg was given as the first concizumab dose). The dose of concizumab was 0.15 mg/kg.

Reporting group title	Concizumab 0.20 mg/kg - Extension part
-----------------------	--

Reporting group description:

Subjects who were on treatment with concizumab once daily at the end of main part of the study continued their treatment in the extension part. Subjects who received eptacog alfa in the main part switched to treatment with concizumab in the extension part (a loading dose of 0.5 mg/kg was given as the first concizumab dose). The initial dose of concizumab was 0.15 mg/kg which was then escalated to 0.20 mg/kg based on the number of spontaneous bleeding episodes.

Reporting group title	Concizumab 0.25 mg/kg - Extension part
-----------------------	--

Reporting group description:

Subjects who were on treatment with concizumab once daily at the end of main part of the study continued their treatment in the extension part. Subjects who received eptacog alfa in the main part switched to treatment with concizumab in the extension part (a loading dose of 0.5 mg/kg was given as the first concizumab dose). The initial dose of concizumab was 0.15 mg/kg which was then escalated to 0.25 mg/kg based on the number of spontaneous bleeding episodes.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 May 2017	This protocol amendment was prepared to address VHP1081 requirements to clarify individual discontinuation criteria, holding rules for the trial and protocol deviations in order to improve safety and rights of the patients.
22 November 2017	This protocol amendment was prepared to obtain pharmacokinetic (PK)-profile of daily dosing with concizumab after initiation of multiple dosing.
12 September 2018	This protocol amendment was finalised to prolong the extension part of trial ensuring additional safety data and providing the option for the patients to be enrolled into a subsequent trial if eligible. Furthermore, patients who permanently prematurely discontinue trial product due to a safety concern can now be followed after completion of visit 17 (end of trial) by unscheduled visits until last patient last visit (LPLV).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
