

Clinical trial results:

Nintedanib as maintenance treatment of malignant pleural mesothelioma (NEMO): a double-blind randomized phase II study of the EORTC Lung Cancer Group

Summary

EudraCT number	2016-000521-38
Trial protocol	BE GB IT
Global end of trial date	12 October 2023

Results information

Result version number	v1 (current)
This version publication date	14 September 2024
First version publication date	14 September 2024

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 April 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	30 April 2023
Global end of trial reached?	Yes
Global end of trial date	12 October 2023
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

the primary objective is to evaluate activity in terms of progression-free survival of nintedanib versus placebo as switch maintenance after first line chemotherapy treatment for patients with unresectable Malignant Pleural Mesothelioma

Protection of trial subjects:

Safety data were reviewed within EORTC Headquarters on a regular basis as part of the Medical Review process. Safety information was included in trial status reports which served as a basis of discussion during EORTC Group meetings.

Background therapy:

Before randomization, patients completed first-line platinum-based chemotherapy (4-6 weeks) for malignant pleural mesothelioma.

Evidence for comparator:

Placebo was used as a comparator. The role of maintenance pemetrexed after completion of 4-6 cycles of the platinum-based doublet chemotherapy was uncertain at the time of the study.

Actual start date of recruitment	15 May 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 26
Country: Number of subjects enrolled	Belgium: 5
Country: Number of subjects enrolled	France: 1
Country: Number of subjects enrolled	Italy: 5
Worldwide total number of subjects	37
EEA total number of subjects	11

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	7
From 65 to 84 years	30
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study intended to randomize 114 patients. It was expected that 114 patients would be required to reach the required number of events within 28 months (2.3 years) under a full accrual rate of 5 patients per month.

In total, 37 patients had been randomized by February 2021. Due to the poor accrual, the recruitment was terminated at that time.

Pre-assignment

Screening details:

Main eligibility criteria:

Age ≥ 18 years

ECOG performance status 0-2

histological diagnosis of unresectable Malignant Pleural Mesothelioma

Response or Stable disease according to modified RECIST criteria after first line platinum-pemetrexed chemotherapy for 4-6 cycles

adequate bone marrow, liver and renal function

Period 1

Period 1 title	Switch maintenance treatment and placebo (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Monitor, Data analyst, Carer, Subject, Assessor

Blinding implementation details:

This is a triple blind study. The patient, the investigator and study team at site and the EORTC Headquarters study team will remain blinded to treatment allocation up to the database lock for the final analysis of the primary endpoint.

However, at any time during the trial, in case of a safety concern affecting an individual patient, the site investigator can request the unblinding of that patient.

Arms

Are arms mutually exclusive?	Yes
Arm title	Nintedanib

Arm description:

Nintedanib 200 mg twice daily until objective evidence of progression, uncontrollable toxicity, patient or physician decision (in case of symptomatic progression) or death.

Arm type	Experimental
Investigational medicinal product name	Nintedanib
Investigational medicinal product code	BIBF 1120
Other name	
Pharmaceutical forms	Capsule, soft
Routes of administration	Oral use

Dosage and administration details:

400 mg (200 mg twice daily), continuous daily dosing until progression of disease or until criteria for interruption of treatment are met .

Dose reductions as needed were used in order to manage undue toxicities. Dose reduction steps: 200 mg twice daily - 150 mg twice daily - 100 mg twice daily - Stop protocol treatment.

If the dose of nintedanib had to be reduced due to adverse events it will stay on the lower dose level for the entire time of administration, reescalation is not allowed

Arm title	Placebo
-----------	---------

Arm description:

Matching placebo twice daily until objective evidence of progression, uncontrollable toxicity, patient or physician decision (in case of symptomatic progression) or death.

Primary: Progression-free survival (PFS)

End point title	Progression-free survival (PFS)
-----------------	---------------------------------

End point description:

Progression Free Survival (PFS) is defined as the time interval between the date of randomization and the date of disease progression, recurrence or death, whichever comes first. If neither event has been observed, then the patient is censored at the date of the last follow up examination

End point type	Primary
----------------	---------

End point timeframe:

Originally planned after reaching 95 PFS events. The accrual was stopped prematurely due to the low accrual rate February 5th 2021 . The analysis was performed on the 37 eligible at the clinical cut-off date of the 30th of April 2023.

End point values	Nintedanib	Placebo		
Subject group type	Reporting group	Reporting group

Units: Months				
median (confidence interval 70%)	3.43 (3.32 to 5.55)	4.58 (3.65 to 9.00)		

Statistical analyses

Statistical analysis title	Primary: Progression-free survival
----------------------------	------------------------------------

Statistical analysis description:

Due to poor accrual, and recruiting only 37 patients (36 in the per-protocol analysis set) rather than the planned 114 patients, the statistical analysis of this (primary) endpoint is only descriptive.

The analysis is performed on the per-protocol population. HR values smaller than 1 indicate longer PFS in the experimental arm.

HR values larger than 1 indicate shorter PFS in the experimental arm.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

The number of patients who had specific adverse events in the period between the randomization and the time of treatment (including placebo treatment) discontinuation was reported. The maximum was ...

Adverse event reporting additional description:

Adverse events are evaluated using CTC grading. Serious adverse events were defined following the Good Clinical Practice Guideline.

Adverse events are reported as belonging to the treatment period if the adverse event start date falls on the first day of treatment and up till the date of last treatment administration + 30 days.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The study was closed prematurely due to poor accrual. The planned sample size was not reached for any of the endpoints. The performed analysis has a descriptive character.

Notes:
