

Clinical trial results:

A Randomized, Double-Blind, Multicenter, Placebo- and active Comparator-Controlled Study to evaluate Efficacy and Safety of MR308 in the Treatment of Acute Pain After Abdominal Hysterectomy Surgery under General Anaesthesia (STARDOM2).

Summary

EudraCT number	2016-000593-38
Trial protocol	ES SK LV PL BG
Global end of trial date	29 June 2018

Results information

Result version number	v1 (current)
This version publication date	04 April 2019
First version publication date	04 April 2019

Trial information

Trial identification

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	29 June 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	29 June 2018
Global end of trial reached?	Yes
Global end of trial date	29 June 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate the efficacy of MR308 doses in the treatment of acute moderate to severe pain. Efficacy was assessed by showing superiority of MR308 doses over placebo and non-inferiority compared with tramadol, followed by superiority over tramadol and superiority over celecoxib based on the Sum of Pain Intensity Differences over 0-4 hours (SPID4).

Protection of trial subjects:

Protection of trial subjects:

1) Inclusion criteria:

- If a female was of child-bearing potential, she had to use highly effective methods of contraception throughout the study, be not breastfeeding, and have negative pregnancy tests prior to receiving IMP.
- The subject had to be alert and calm, spontaneously payed attention to caregiver, e.g. Richmond Agitation-Sedation Scale (RASS) = 0 (Sessler et al., 2002 & Ely et al., 2003).

2) Exclusion criteria:

- Several exclusion criteria excluded subjects who were at risk from the use of IMP (e.g. those with hypersensitivity) or the study methods (please refer to protocol)

3) Discontinuation:

The Investigator(s) or subjects themselves were able to stop study treatment at any time for safety or personal reasons.

The participation of an individual subject could be terminated prematurely if subjects were taking the maximum rescue medication dose of 4000 mg Paracetamol per day and still reported uncontrolled pain or if any condition occurred which, in the opinion of the Investigator, no longer permitted a safe participation in the study.

4) Safety was assessed throughout the study by evaluation of the incidence of adverse events and clinically significant changes on laboratory safety results, vital signs, physical examination, and electrocardiograms (ECGs).

Background therapy:

Background therapy:

Paracetamol (Acetaminophen), taken orally, was the rescue pain medication during the Double-blind Period of the study.

The rescue medication was supplied to the subject with the IMP at randomisation and could be taken up to four times a day and the maximum daily dose of 4 g in divided doses up to Visit 8.

A single dose of rescue medication was defined as 1000 mg (two tablets). At the discretion of the Investigator, the paracetamol dose may have been lowered to 500 mg (1 tablet), if the Investigator or subject felt that the dose was higher than what may be required to provide adequate analgesic effect.

Evidence for comparator:

The new co-crystal MR308 combines two well-known active principles, tramadol and celecoxib. The analgesic effect is expected to occur at lower doses than those of the approved constituents drugs of MR308 (tramadol hydrochloride and celecoxib) for the treatment of acute pain. Therefore it was compared to both constituents, tramadol and celecoxib.

Actual start date of recruitment	01 December 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 272
Country: Number of subjects enrolled	Spain: 28
Country: Number of subjects enrolled	Bulgaria: 254
Country: Number of subjects enrolled	Hungary: 195
Country: Number of subjects enrolled	Latvia: 123
Country: Number of subjects enrolled	Belarus: 153
Country: Number of subjects enrolled	Russian Federation: 113
Worldwide total number of subjects	1138
EEA total number of subjects	872

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1093
From 65 to 84 years	45
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study was conducted at 65 sites in 7 countries: 5 sites in Belarus, 12 sites in Bulgaria, 13 sites in Hungary, 3 sites in Latvia, 11 sites in Poland, 11 sites in Russia and 10 sites in Spain. The first patient was recruited on 05-Apr-2017, the last visit of the last patient was on 29-Jun-2018.

Pre-assignment

Screening details:

The Screening Period may have taken up to 28 days. Subjects, who did not comply with all screening inclusion and exclusion criteria, withdrew their consent prior to the planned abdominal surgery (Visit 2) and all other subjects who discontinued the study before being randomised were considered Screening Failures.

Period 1

Period 1 title	Treatment Period/Double-Blind Phase (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

The test IMP MR308 tablets and tramadol capsules were over-encapsulated to have the same appearance. In order to maintain the blind, subjects randomised to MR308 and celecoxib treatment arms were given twice daily additional placebo capsules to match the posology of the active comparator, tramadol, which was given four times daily. Subjects randomised to any treatment arm (including placebo) took their study treatment four times daily.

Arms

Are arms mutually exclusive?	Yes
Arm title	MR308 100 mg

Arm description:

Subjects received MR308 100 mg (44 mg of tramadol hydrochloride and 56 mg of celecoxib) bid.

Arm type	Experimental
Investigational medicinal product name	Tramadol/Celecoxib 100 mg
Investigational medicinal product code	MR308 100 mg
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

MR308 100 mg (44 mg of tramadol hydrochloride and 56 mg of celecoxib).

Subjects received two over-encapsulated tablets with active treatment and two placebo capsules daily. Total daily dose: 200 mg MR308 (88 mg of tramadol hydrochloride and 112 mg of celecoxib).

Arm title	MR308 150 mg
------------------	--------------

Arm description:

Subjects received MR308 150 mg (66 mg of tramadol hydrochloride and 84 mg of celecoxib) bid.

Arm type	Experimental
Investigational medicinal product name	Tramadol/Celecoxib 150 mg
Investigational medicinal product code	MR308 150 mg
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

MR308 150 mg (66 mg of tramadol hydrochloride and 84 mg of celecoxib).

Subjects received two over-encapsulated tablets with active treatment and two placebo capsules daily.

Arm title	MR308 200 mg
Arm description: Subjects received MR308 200 mg (88 mg of tramadol hydrochloride and 112 mg of celecoxib) bid.	
Arm type	Experimental
Investigational medicinal product name	Tramadol/Celecoxib 200 mg
Investigational medicinal product code	MR308 200 mg
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details: MR308 200 mg (88 mg of tramadol hydrochloride and 112 mg of celecoxib). Subjects received two over-encapsulated tablets with active treatment and two placebo capsules daily. Total daily dose: 400 mg MR308 (176 mg of tramadol hydrochloride and 224 mg of celecoxib).	
Arm title	Tramadol
Arm description: Subjects received Tramadol 100 mg IR qid.	
Arm type	Active comparator
Investigational medicinal product name	Tramadol 100 mg IR
Investigational medicinal product code	Tramadol 100 mg
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details: Tramadol hydrochloride immediate release 100 mg. Subjects received 4 over-encapsulated capsules with active treatment daily. Total daily dose: 400 mg tramadol.	
Arm title	Celecoxib
Arm description: Subjects received Celecoxib 100 mg bid	
Arm type	Active comparator
Investigational medicinal product name	Celecoxib 100 mg
Investigational medicinal product code	Celecoxib 100 mg
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details: Celecoxib 100 mg. Subjects received one capsule of 100 mg celecoxib per intake for two times a day plus 2 intakes of placebo capsules to maintain the blind. Total daily dose: 200 mg celecoxib.	
Arm title	Placebo
Arm description: Subjects received placebo.	
Arm type	Placebo

Investigational medicinal product name	Placebo
Investigational medicinal product code	Placebo
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received 4 doses of placebo per day.

Primary: SPID4

End point title	SPID4
End point description:	
The primary efficacy endpoint was the SPID4. SPID4 is derived as the weighted Sum of Pain Intensity Differences (baseline pain – current pain), measured at different time points via the Pain Intensity - Visual Analogue Scale (PI-VAS, range of scores: 0-100 mm). Time between two consecutive measurements was used for weighting. Larger values indicate larger pain relief. LOCF imputation was employed.	
End point type	Primary
End point timeframe:	
Sum of pain intensity difference between baseline (pre-dose) and 4 hour post-dose.

Statistical analyses

Statistical analysis title	Superiority of MR308 100 mg over placebo
-----------------------------------	--

Statistical analysis description:

The comparison of all MR308 doses with placebo, tramadol and celecoxib based on SPID4 was performed using an analysis of covariance (ANCOVA) model with treatment and QPI (moderate, severe) as fixed effects, centre as a random effect and pre-dose (0h) PI-VAS as covariate. Covariance parameters were estimated via the restricted maximum likelihood method. An unstructured covariance matrix was assumed (common across all treatment arms) and the Kenward and Roger's method for fixed effects degrees

Adverse events

Adverse events information

Timeframe for reporting adverse events:

AEs were collected from the time the informed consent was signed until the follow-up visit, which took place at least 7 days after the subject's last dose of IMP.

Adverse event reporting additional description:

AEs were recorded by non-elicited reporting at each study visit.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 September 2017	The Protocol Amendment introduced changes following clarification from the European Medicines Agency (EMA) that the study is required to have confirmatory testing against the celecoxib arm, unlike the exploratory analysis that was planned in the original protocol.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
