Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 February 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	17 January 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this trial was to establish equivalence in efficacy between BI 695501 and US-licensed Humira® at Week 16 in patients with active moderate to severe chronic plaque psoriasis.

Protection of trial subjects:

Only patients that met all the study inclusion and none of the exclusion criteria were to be randomized in the study. All patients were free to withdraw from the clinical trial at any time for any reason given. Close monitoring of all patients was adhered to throughout the trial conduct.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	21 September 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 109
Country: Number of subjects enrolled	Czech Republic: 32
Country: Number of subjects enrolled	Estonia: 3
Country: Number of subjects enrolled	Germany: 32
Country: Number of subjects enrolled	Poland: 81
Country: Number of subjects enrolled	Russian Federation: 66
Country: Number of subjects enrolled	Slovakia: 11
Country: Number of subjects enrolled	Ukraine: 90
Worldwide total number of subjects	424
EEA total number of subjects	159

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	395
From 65 to 84 years	29
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Phase III, multinational, randomized, double-blind, parallel-arm, multiple-dose, active-comparator trial of BI 695501 and US-licensed Humira with a 24-week treatment period and 10 weeks of safety follow up, in patients with moderate to severe chronic plaque psoriasis.

Pre-assignment

Screening details:

All patients were screened for eligibility to participate in the trial. Patients attended a specialist sites which ensured that they (the patients) met all strictly implemented inclusion/exclusion criteria. Patients were not to be entered to trial treatment if any one of the specific entry criteria was violated.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Monitor, Subject, Carer, Data analyst, Assessor

Blinding implementation details:

This was a double-blind trial.

Arms

Are arms mutually exclusive?	Yes
Arm title	BI 695501

Arm description:

Patients were administered with BI 695501 via subcutaneous (SC) injection 80 milligram (mg) on Day 1 and 40 milligram (mg) on every other week from Week 1 to Week 23.

Arm type	Experimental
Investigational medicinal product name	BI 695501
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Patients were administered with BI 695501 via subcutaneous (SC) injection 80 milligram (mg) on Day 1 and 40 milligram (mg) on every other week from Week 1 to Week 23.

Arm title	US-licensed Humira
------------------	--------------------

Arm description:

Patients were administered US-licensed Humira via subcutaneous (SC) injection 80 mg on Day 1 and 40 milligram on every other week from Week 1 to Week 23.

Arm type	Active comparator
Investigational medicinal product name	US-licensed Humira
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Patients were administered US-licensed Humira via subcutaneous (SC) injection 80 mg on Day 1 and 40 milligram on every other week from Week 1 to Week 23.

Number of subjects in period 1^[1]	BI 695501	US-licensed Humira
Started	159	158
Completed	141	134
Not completed	18	24
Consent withdrawn by subject	3	4
Physician decision	-	1
Adverse event, non-fatal	3	2
Lost to follow-up	5	3
Other than listed	3	4
Lack of efficacy	4	8
Protocol deviation	-	2

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Baseline characteristics are based on patients who were randomised after successfully completing the screening period and received at least one dose of the trial medication.

Statistical analyses

Statistical analysis title	Statistical Analysis 1
Statistical analysis description:	
Week16 confidence interval for estimated difference in percentage are produced using cumulative distribution function method of Reeve. Statistical model: Logit (response to treatment at Week16)=Treatment+Baseline PASI+Prior exposure to a biologic agent+random error. Model included fixed, categorical effects of treatment (BI 695501 vs US-licensed Humira) and prior exposure to a biologic	

agent (yes/no), continuous effect of baseline PASI. The random error was assumed to be binomially distributed.

Comparison groups	BI 695501 v US-licensed Humira
Number of subjects included in analysis	315
Analysis specification	Pre-specified
Analysis type	equivalence ^[3]
Method	Regression, Logistic
Parameter estimate	Difference in PASI 75 Response Rate
Point estimate	-2.2
Confidence interval	
level	95 %
sides	2-sided
lower limit	-14.4
upper limit	8.7

Notes:

[3] - Protocol defined margins are: [-18.0%, +18.0%] for Week 16, 95% confidence interval. Between-imputation variance is zero. Confidence interval is based on one imputed set. Difference in PASI 75 Response Rate = (BI 695501 – US-licensed Humira, %)

Secondary: The percentage of patients with a PASI 75 response at Week 24

End point title	The percentage of patients with a PASI 75 response at Week 24
-----------------	---

End point description:

The PASI tool provides numeric scoring for a patient's overall psoriasis disease state, ranging from 0 to 72. Head (h), trunk (t), upper extremities (u) and lower extremities (l) areas were assessed; correspond to 10, 30, 20, and 40% of the total body area, respectively. The signs of severity, erythema (E), induration (I) and desquamation (D) of lesions were assessed using a numeric scale of 0 to 4 where 0 was a complete lack of cutaneous involvement and 4 was the severest possible involvement. The area of psoriatic involvement of these areas (Ah, At, Au, and Al) was given a numerical value: 0 = no involvement, 1 = <10%, 2 = 10 to <30%, 3 = 30 to <50%, 4 = 50 to <70%, 5 = 70 to <90%, and 6 = 90 to 100% involvement. $PASI = 0.1(Eh+Ih+Dh)Ah + 0.3(Et+It+Dt)At + 0.2(Eu+Iu+Du)Au + 0.4(El+Il+Dl)Al$. ----------------------------	------------------------

Statistical analysis description:

Analysis of covariance (ANCOVA) was performed based on the following model: PASI percentage

improvement from baseline at Week 16= Treatment + Baseline PASI +Prior exposure to a biologic agent + random error.

Comparison groups	BI 695501 v US-licensed Humira
Number of subjects included in analysis	298
Analysis specification	Pre-specified
Analysis type	other ^[9]
Method	ANCOVA
Parameter estimate	Difference of Least Squares Means (LSM)
Point estimate	1.7
Confidence interval	
level	95 %
sides	2-sided
lower limit	-2.7
upper limit	6

Notes:

[9] - Difference of LSM = LSM of (BI 695501 – Humira)

Secondary: The percentage of patients with a Static Physician's Global Assessment (sPGA) ≤1 (clear or almost clear) at Week 16

End point title	The percentage of patients with a Static Physician's Global Assessment (sPGA) ≤1 (clear or almost clear) at Week 16
-----------------	---

End point description:

The Static Physician's Global Assessment (sPGA) is a 5-point score ranging from 0 to 4, based on the physician's assessment of the average thickness, erythema, and scaling of all psoriatic lesions. The assessment was considered "static", which referred to the patient's disease state at the time of the assessment, without comparison to any of the patient's previous disease states (dynamic), whether at Baseline or at a previous visit. A lower score indicated less body coverage, with 0 being clear, 1 being almost clear, and 4 being. Percentage = least squares means per treatment groups back transformed using inverse logit function.

Point estimate	7.5
Confidence interval	
level	95 %
sides	2-sided
lower limit	-4.8
upper limit	19.1

Notes:

[12] - Missing sPGA at Week 16 data were imputed using a combination of non-responder imputation (NRI) and last observed carried forward (LOCF). Difference in sPGA ≤ 1 Response Rate = (BI 695501 – US-licensed Humira, %).

Secondary: The percentage of patients achieving a Dermatology Life Quality Index (DLQI) of 0 or 1 at Week 16

End point title	The percentage of patients achieving a Dermatology Life Quality Index (DLQI) of 0 or 1 at Week 16
-----------------	---

End point description:

The DLQI is a subject-administered, 10-question, that covers 6 domains including symptoms and feelings, daily activities, leisure, work and school, personal relationships, and treatment. It has a 1-week recall period. Every item score ranges from 0 (not relevant/not at all) to 3 (very much). Question 7 is a “yes/no” question where “yes” is scored as 3. The DLQI total score was calculated by summing the scores of each question resulting in a range of 0 to 30 where 0-1 = no effect on subject’s life, 2-5 = small effect, 6-10 = moderate effect, 11-20 = very large effect, and 21-30 = extremely large effect on the subject’s life. The higher the score, the more the quality of life is impaired. If the answer to 1 question in a domain was missing, that domain was treated as missing. If 2 or more questions were left unanswered (missing), DLQI total score was treated as missing. Percentage = least squares means per treatment groups back transformed using inverse logit function.
