Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 May 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	15 May 2020
Global end of trial reached?	Yes
Global end of trial date	15 May 2020
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study is to evaluate the safety and tolerability of long-term therapy with TEV-50717.

Protection of trial subjects:

This study was conducted in full accordance with the International Council for Harmonisation (ICH) Good Clinical Practice (GCP) Tripartite Guideline (E6) and any applicable national and local laws and regulations (for example, Code of Federal Regulations Title 21, Parts 11, 50, 54, 56, 312, and 314 and European Union Directive 2001/20/EC on the approximation of the laws, regulations, and administrative provisions of the Member States relating to the implementation of GCP in the conduct of clinical studies on medicinal products for human use).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 May 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 1
Country: Number of subjects enrolled	Argentina: 5
Country: Number of subjects enrolled	Canada: 18
Country: Number of subjects enrolled	Colombia: 7
Country: Number of subjects enrolled	Denmark: 6
Country: Number of subjects enrolled	Spain: 6
Country: Number of subjects enrolled	Hungary: 12
Country: Number of subjects enrolled	Italy: 4
Country: Number of subjects enrolled	Korea, Republic of: 4
Country: Number of subjects enrolled	Mexico: 8
Country: Number of subjects enrolled	Poland: 33
Country: Number of subjects enrolled	Russian Federation: 6
Country: Number of subjects enrolled	Serbia: 9
Country: Number of subjects enrolled	Ukraine: 30
Country: Number of subjects enrolled	United States: 79
Worldwide total number of subjects	228
EEA total number of subjects	61

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	95
Adolescents (12-17 years)	133
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

228 participants with Tourette Syndrome were enrolled after completing one of two eligible parent studies.

Pre-assignment

Screening details:

Period I included an open-label period with titration and maintenance. Period II included randomized drug withdrawal in which participants were administered their current TEV50717 dose or placebo. Participants were re-titrated to TEV-50717. In Period III, participants continued their open-label maintenance dose of TEV50717.

Period 1

Period 1 title	Period I - Part A
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

Open-label

Arms

Arm title	TEV-50717
-----------	-----------

Arm description:

All participants underwent TEV-50717 dose titration in this study. They received 6 mg of TEV-50717 with food on the evening of day 1. The titration scheme and maximum dose were determined by body weight and cytochrome P450 2D6 (CYP2D6) impairment status from the parent study.

Arm type	Experimental
Investigational medicinal product name	TEV-50717 (Deuterabenazine)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

All participants underwent TEV-50717 dose titration in this study. Participants received 6 mg of TEV-50717 with food on the evening of day 1. The titration scheme and maximum dose were determined by body weight and cytochrome P450 2D6 (CYP2D6) impairment status from the parent study.

Number of subjects in period 1	TEV-50717
Started	228
Completed	137
Not completed	91
Consent withdrawn by subject	23
Adverse event, non-fatal	14
Terminated by sponsor	44
Lost to follow-up	2
Missing or unknown	7

Protocol deviation	1
--------------------	---

Period 2

Period 2 title	Period II - Part B
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

Double-blind

Arms

Are arms mutually exclusive?	Yes
Arm title	Randomized TEV-50717

Arm description:

Participants were randomized to their current dose of TEV-50717, which was administered during the Part B Randomized Drug Withdrawal (RW) 2-week period.

Arm type	Experimental
Investigational medicinal product name	TEV-50717 (Deuterabenazine)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received their current dose of TEV-50717.

Arm title	Randomized Placebo
------------------	--------------------

Arm description:

Participants were randomized to placebo, which was administered during the Part B Randomized Drug Withdrawal (RW) 2-week period only.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo was administered during Part B Randomized Drug Withdrawal (RW) 2-week period only.

Number of subjects in period 2	Randomized TEV-50717	Randomized Placebo
Started	91	46
Completed	88	45
Not completed	3	1
Adverse event, non-fatal	1	-
Missing or unknown	2	1

Period 3

Period 3 title	Period III - Part A Resumed
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded
Blinding implementation details:	
Open-label	

Arms

Arm title	TEV-50717 Re-titration and Maintenance
Arm description:	
Participants who were randomized to placebo during the withdrawal period were re-titrated to their TEV-50717 maintenance dose. Participants who were randomized to TEV-50717 continued their maintenance dose.	
Arm type	Experimental
Investigational medicinal product name	TEV-50717 (Deuterabenazine)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received their current dose of TEV-50717 or were re-titrated to TEV-50717 if randomized to the placebo in the previous period.

Number of subjects in period 3	TEV-50717 Re-titration and Maintenance
Started	133
Completed	48
Not completed	85
Consent withdrawn by subject	4
Adverse event, non-fatal	4
Terminated by sponsor	68
Lost to follow-up	1
Missing or unknown	8

End points

End points reporting groups

Reporting group title	TEV-50717
Reporting group description: All participants underwent TEV-50717 dose titration in this study. They received 6 mg of TEV-50717 with food on the evening of day 1. The titration scheme and maximum dose were determined by body weight and cytochrome P450 2D6 (CYP2D6) impairment status from the parent study.	
Reporting group title	Randomized TEV-50717
Reporting group description: Participants were randomized to their current dose of TEV-50717, which was administered during the Part B Randomized Drug Withdrawal (RW) 2-week period.	
Reporting group title	Randomized Placebo
Reporting group description: Participants were randomized to placebo, which was administered during the Part B Randomized Drug Withdrawal (RW) 2-week period only.	
Reporting group title	TEV-50717 Re-titration and Maintenance
Reporting group description: Participants who were randomized to placebo during the withdrawal period were re-titrated to their TEV-50717 maintenance dose. Participants who were randomized to TEV-50717 continued their maintenance dose.	

Primary: Number of participants reporting treatment emergent adverse events (AEs) for Parts A & B

End point title	Number of participants reporting treatment emergent adverse events (AEs) for Parts A & B ^[1]
End point description: An AE was defined as any untoward medical occurrence that develops or worsens in severity during the conduct of a clinical study and does not necessarily have a causal relationship to the study drug. Includes clinically significant changes such as changes in vital signs or lab values. Relationship of AE to treatment was determined by the Investigator. Serious AEs include death, a life-threatening adverse event, inpatient hospitalization or prolongation of existing hospitalization, persistent or significant disability or incapacity, a congenital anomaly or birth defect, or an important medical event that jeopardized the participant and required medical intervention to prevent the previously listed serious outcomes. A summary of other non-serious AEs and all serious AEs, regardless of causality is located in Reported AE section.	
End point type	Primary
End point timeframe: Day 1 to Week 55	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The assessment for this endpoint was descriptive and no statistical analyses were performed for this endpoint.

End point values	TEV-50717

Secondary: Change from baseline in the Yale Global Tic Severity Scale (YGTSS) Total Tic Score (TTS)

End point title	Change from baseline in the Yale Global Tic Severity Scale (YGTSS) Total Tic Score (TTS)
-----------------	--

End point description:

YGTSS rating scale is a semi-structured clinician rating instrument that provides an evaluation of the number, frequency, intensity, complexity, and interference of motor and phonic tics. YGTSS is composed of 11 items: 5 items for motor tic severity, 5 items for vocal tic severity, and 1 item for impairment. Each item for motor tic severity and vocal is rated on a 6-point scale (0 for none to 5 to severe). MTSS is the sum of the 5 items for motor tic severity and VTSS is the sum of the 5 items for vocal tic severity. TTS is the sum of MTSS and VTSS, ranges from 0 (none/absent) to 50 (severe). Higher scores indicate greater severity/worse outcome. Baseline is defined as the last measurement on or prior to the first dose of the open-label study medication.

Secondary: Change from baseline in the Tourette Syndrome-Clinical Global Impression (TS-CGI) score

End point title	Change from baseline in the Tourette Syndrome-Clinical Global Impression (TS-CGI) score
-----------------	---

End point description:

The TS-CGI scale is a 7-point Likert scale that allows the clinician to use all available information to assess the impact of tics on the participant's quality of life. The TS-CGI is rated as follows: 1 (normal or no tics at all), 2 (borderline), 3 (mild), 4 (moderate), 5 (marked), 6 (severe), and 7 (extreme, incapacitating tics). Lower scores indicate better quality of life. Baseline is defined as the last measurement on or prior to the first dose of the open-label study medication.

Secondary: Change from baseline in the Child and Adolescent Gilles de la Tourette Syndrome – Quality of Life (C&A-GTS-QOL) activities of daily living (ADL) subscale score

End point title	Change from baseline in the Child and Adolescent Gilles de la Tourette Syndrome – Quality of Life (C&A-GTS-QOL) activities of daily living (ADL) subscale score
-----------------	---

End point description:

C&A-GTS-QOL is a 27-item questionnaire that asks participant to assess the extent to which their quality of life is impacted by their symptoms. C&A-GTS-QOL contains 6 subscales (cognitive, coprophenomena, psychological, physical, obsessive-compulsive, and ADL) and uses a 5-point Likert scale ranging from no problem to extreme problem. Following 3 questions from 27-item questionnaire were assessed in ADL C&A-GTS-QOL subscale: Question 2 (Had difficulty with school or sport activities?), 24 (Felt you needed more help or support from other people?), and 26 (Had difficulty going out with other people?). Total score of ADL subscale ranged from 0 (no problem) to 12 (extreme problem). Lower score indicated better quality of life. Baseline is defined as the last measurement on or prior to the first dose of the open-label study medication.

Secondary: Change from randomized withdrawal baseline (Week 28) in the Yale Global Tic Severity Scale (YGTSS) Total Tic Score (TTS) to Week 30

End point title	Change from randomized withdrawal baseline (Week 28) in the
-----------------	---

End point description:

YGTSS rating scale is a semi-structured clinician rating instrument that provides an evaluation of the number, frequency, intensity, complexity, and interference of motor and phonic tics. YGTSS is composed of 11 items: 5 items for motor tic severity, 5 items for vocal tic severity, and 1 item for impairment. Each item for motor tic severity and vocal is rated on a 6-point scale (0 for none to 5 to severe). MTSS is the sum of the 5 items for motor tic severity and VTSS is the sum of the 5 items for vocal tic severity. TTS is the sum of MTSS and VTSS, ranges from 0 (none/absent) to 50 (severe). Higher scores indicate greater severity/worse outcome. The model is an ANCOVA model that includes fixed effects for treatment group. The randomized withdrawal baseline TTS and age group at baseline (2 levels: 6-11 years, 12-18 years) are included as covariates.

Reporting groups

Reporting group title	Total
-----------------------	-------

Reporting group description:

All participants underwent TEV-50717 dose titration in this study. They received 6 mg of TEV-50717 with food on the evening of day 1. The titration scheme and maximum dose were determined by body weight and cytochrome P450 2D6 (CYP2D6) impairment status from the parent study.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
22 June 2017	To change study conduct including number of participants randomized and clinical study personnel.
15 November 2017	To incorporate randomized drug withdrawal period and update prohibited medications.
01 February 2018	To correct the re-titration regiment in Part II.
22 May 2019	To address regulatory requirements such as updated number of participants, an interim analysis, and clarify screening procedures.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

None

Notes:
