Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	14 January 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	14 January 2021
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of this study was to evaluate the efficacy and safety of upadacitinib 45 mg once daily (QD) compared to placebo in inducing clinical remission (per the Adapted Mayo score) in subjects with moderately to severely active ulcerative colitis (UC) who have demonstrated inadequate response, loss of response, or intolerance to oral aminosalicylates, immunosuppressants, corticosteroids, and/or biologic therapies.

Protection of trial subjects:

Subject and/or legal guardian read and understood the information provided about the study and gave written permission.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 December 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 7
Country: Number of subjects enrolled	Australia: 4
Country: Number of subjects enrolled	Austria: 3
Country: Number of subjects enrolled	Belgium: 2
Country: Number of subjects enrolled	Bosnia and Herzegovina: 2
Country: Number of subjects enrolled	Brazil: 3
Country: Number of subjects enrolled	Canada: 37
Country: Number of subjects enrolled	Chile: 2
Country: Number of subjects enrolled	China: 13
Country: Number of subjects enrolled	Colombia: 2
Country: Number of subjects enrolled	Croatia: 3
Country: Number of subjects enrolled	Czechia: 8
Country: Number of subjects enrolled	Estonia: 13
Country: Number of subjects enrolled	France: 1
Country: Number of subjects enrolled	Germany: 2
Country: Number of subjects enrolled	Greece: 2
Country: Number of subjects enrolled	Hungary: 4
Country: Number of subjects enrolled	Israel: 2
Country: Number of subjects enrolled	Italy: 34

Country: Number of subjects enrolled	Japan: 81
Country: Number of subjects enrolled	Korea, Republic of: 5
Country: Number of subjects enrolled	Latvia: 4
Country: Number of subjects enrolled	Lithuania: 10
Country: Number of subjects enrolled	Malaysia: 2
Country: Number of subjects enrolled	Mexico: 7
Country: Number of subjects enrolled	Norway: 22
Country: Number of subjects enrolled	Poland: 24
Country: Number of subjects enrolled	Portugal: 8
Country: Number of subjects enrolled	Puerto Rico: 2
Country: Number of subjects enrolled	Russian Federation: 30
Country: Number of subjects enrolled	Serbia: 9
Country: Number of subjects enrolled	Singapore: 1
Country: Number of subjects enrolled	Slovakia: 10
Country: Number of subjects enrolled	South Africa: 9
Country: Number of subjects enrolled	Spain: 1
Country: Number of subjects enrolled	Switzerland: 9
Country: Number of subjects enrolled	Taiwan: 15
Country: Number of subjects enrolled	Turkey: 2
Country: Number of subjects enrolled	Ukraine: 6
Country: Number of subjects enrolled	United Kingdom: 4
Country: Number of subjects enrolled	United States: 117
Worldwide total number of subjects	522
EEA total number of subjects	151

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	9
Adults (18-64 years)	466
From 65 to 84 years	47
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study included a Screening Period of up to 5 weeks, Part 1, and Part 2. Part 1 was a randomized, double-blind, placebo-controlled 8-week induction period. Part 2 was an open-label, 8 week extended treatment period for clinical non-responders from Part 1. A total of 522 subjects were randomized at 204 sites in 41 countries.

### Pre-assignment

Screening details:

Participants were randomized in a 2:1 ratio to upadacitinib or placebo. Randomization was stratified by bio-IR status, corticosteroid use, and Adapted Mayo score at Baseline. Within bio-IR, randomization was further stratified by number of prior biologic treatments. Within non-bio-IR, randomization was further stratified by previous biologic use.

### Period 1

Period 1 title	Part 1: Placebo-controlled Period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst, Carer, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Upadacitinib 45 mg

Arm description:

Participants received 45 mg upadacitinib once daily (QD) for 8 weeks.

Arm type	Experimental
Investigational medicinal product name	Upadacitinib
Investigational medicinal product code	ABT-494
Other name	RINVOQ
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Upadacitinib 45 mg administered orally once daily.

<b>Arm title</b>	Placebo
------------------	---------

Arm description:

Participants received placebo matching to upadacitinib once daily for 8 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Administered orally once daily.

Number of subjects in period 1	Upadacitinib 45 mg	Placebo
Started	345	177
Received Treatment	344	177
Completed	334	164
Not completed	11	13
Consent withdrawn by subject	6	4
Adverse event, non-fatal	5	6
Other	-	3

## Period 2

Period 2 title	Part 2: Open-label Extension
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

## Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Upadacitinib 45 mg / Upadacitinib 45 mg

### Arm description:

Participants initially assigned to upadacitinib who did not achieve clinical response per Adapted Mayo score at Week 8 in Part 1 received upadacitinib 45 mg once daily for 8 additional weeks in the open-label extension period.

Arm type	Experimental
Investigational medicinal product name	Upadacitinib
Investigational medicinal product code	ABT-494
Other name	RINVOQ
Pharmaceutical forms	Tablet
Routes of administration	Oral use

### Dosage and administration details:

Upadacitinib 45 mg administered orally once daily.

<b>Arm title</b>	Placebo / Upadacitinib 45 mg
------------------	------------------------------

### Arm description:

Participants initially assigned to placebo who did not achieve clinical response per Adapted Mayo score at Week 8 in Part 1 received upadacitinib 45 mg once daily for 8 weeks in the open-label extension period.

Arm type	Experimental
Investigational medicinal product name	Upadacitinib
Investigational medicinal product code	ABT-494
Other name	RINVOQ
Pharmaceutical forms	Tablet
Routes of administration	Oral use

### Dosage and administration details:

Upadacitinib 45 mg administered orally once daily.

Number of subjects in period 2 <sup>[1]</sup>	Upadacitinib 45 mg / Upadacitinib 45 mg	Placebo / Upadacitinib 45 mg
Started	68	116
Completed	65	111
Not completed	3	5
Consent withdrawn by subject	1	2
Adverse event, non-fatal	1	1
Other	1	2

---

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Part 2 was an open label, 8-week extended treatment period for subjects who did not achieve clinical response per Adapted Mayo score at Week 8 in Part 1.

## Baseline characteristics

### Primary: Percentage of Participants who Achieved Clinical Remission per Adapted Mayo Score at Week 8

End point title	Percentage of Participants who Achieved Clinical Remission per Adapted Mayo Score at Week 8
End point description: The Adapted Mayo Score is a composite score of UC disease activity based on the following 3 subscores: 1) Stool frequency subscore (SFS), scored from 0 (normal number of stools) to 3 (5 or more stools more than normal). 2) Rectal bleeding subscore (RBS), scored from 0 (no blood seen) to 3 (blood alone passed). 3) Endoscopic subscore, scored from 0 (normal or inactive disease) to 3 (severe disease, spontaneous bleeding, ulceration). The overall Adapted Mayo score ranges from 0 to 9 where higher scores represent more severe disease. Clinical Remission is defined as an Adapted Mayo score $\leq 2$ , with SFS $\leq 1$ and not higher than Baseline, RBS of 0, and endoscopic subscore $\leq 1$ . The Part 1 intent-to-treat population (ITT1) includes randomized subjects who received at least 1 dose of study drug in Part 1. The ITT1 population excludes 6 subjects from 1 site with non-compliance. Non-responder imputation incorporating multiple imputation to handle missing data due to COVID-19 was used.

## Secondary: Percentage of Participants Achieving Clinical Response per Adapted Mayo Score at Week 8

End point title	Percentage of Participants Achieving Clinical Response per Adapted Mayo Score at Week 8
-----------------	---

End point description:

The Adapted Mayo Score is a composite score of UC disease activity based on the following 3 subscores:  
1) Stool frequency subscore (SFS), scored from 0 (normal number of stools) to 3 (5 or more stools more than normal).

2) Rectal bleeding subscore (RBS), scored from 0 (no blood seen) to 3 (blood alone passed).

3) Endoscopic subscore, scored from 0 (normal or inactive disease) to 3 (severe disease with spontaneous bleeding, ulceration).

The overall Adapted Mayo score ranges from 0 to 9 with higher scores representing more severe disease.

Clinical response per the Adapted Mayo Score is defined as a decrease in Adapted Mayo score  $\geq 2$  points and  $\geq 30\%$  from Baseline, plus a decrease in RBS  $\geq 1$  or an absolute RBS  $\leq 1$ .

The analysis was conducted in the ITT1 population; non-responder imputation incorporating multiple imputation to handle missing data due to COVID-19 was used.

## Secondary: Percentage of Participants Who Achieved Histologic-Endoscopic Mucosal Improvement at Week 8

End point title	Percentage of Participants Who Achieved Histologic-Endoscopic Mucosal Improvement at Week 8
-----------------	---

End point description:

Histologic endoscopic mucosal improvement is defined as an endoscopic subscore of 0 or 1 and a Geboes score  $\leq 3.1$ .

The endoscopic subscore ranges from 0 (normal or inactive disease) to 3 (severe disease with spontaneous bleeding, ulceration).

The Geboes histologic index includes seven histological features (architectural change, chronic inflammatory infiltrate, lamina propria neutrophils and eosinophils, neutrophils in epithelium, crypt destruction and erosion or ulcers). The Geboes score has 6 grades, each with 3-5 subgrades: Grade 0, structural change only; Grade 1, chronic inflammation; Grade 2, lamina propria neutrophils and eosinophils; Grade 3, neutrophils in epithelium; Grade 4, crypt destruction; and Grade 5, erosions or ulceration.

The analysis was conducted in the ITT1 population; non-responder imputation incorporating multiple imputation to handle missing data due to COVID-19 was used.

Notes:

[35] - The primary and ranked secondary efficacy endpoints were tested with multiplicity adjustment using a fixed-sequence multiple testing procedure to ensure a strong control of family-wise type I error rate at significance level  $\alpha = 0.05$  (2-sided).

[36] - Cochran-Mantel-Haenszel (CMH) test adjusted for strata (Baseline corticosteroid use (yes or no), Baseline Adapted Mayo score ( $\leq 7$  or  $> 7$ ), bio-IR status (bio-IR or non-bio-IR)) for the comparison of two treatment groups.

## Secondary: Change from Baseline in Inflammatory Bowel Disease Questionnaire (IBDQ) Total Score at Week 8

End point title	Change from Baseline in Inflammatory Bowel Disease Questionnaire (IBDQ) Total Score at Week 8
-----------------	---

End point description:

The Inflammatory Bowel Disease Questionnaire (IBDQ) is used to assess health-related quality of life (HRQoL) in patients with ulcerative colitis. It consists of 32 questions evaluating bowel and systemic symptoms, as well as emotional and social functions. Each question is answered on a scale from 1 (worst) to 7 (best). The total score ranges from 32 to 224 with higher scores indicating better health-related quality of life. A positive change from Baseline indicates improvement.

The analysis was conducted in the ITT1 population with available data; a mixed effect model repeat measurement (MMRM) analysis with data from observed cases up to Week 8 was used except for measurements at or after the occurrence of UC-related corticosteroids intercurrent event were excluded.

End point type	Secondary

Notes:

[43] - The primary and ranked secondary efficacy endpoints were tested with multiplicity adjustment using a fixed-sequence multiple testing procedure to ensure a strong control of family-wise type I error rate at significance level  $\alpha = 0.05$  (2-sided).

[44] - Cochran-Mantel-Haenszel (CMH) test adjusted for strata (Baseline corticosteroid use (yes or no), Baseline Adapted Mayo score ( $\leq 7$  or  $> 7$ ), bio-IR status (bio-IR or non-bio-IR)) for the comparison of two treatment groups.

## Secondary: Change from Baseline in Functional Assessment of Chronic Illness Therapy-Fatigue (FACIT-F) Score at Week 8

End point title	Change from Baseline in Functional Assessment of Chronic Illness Therapy-Fatigue (FACIT-F) Score at Week 8
-----------------	--

End point description:

The FACIT fatigue questionnaire was developed to assess fatigue associated with anemia. It consists of 13 fatigue-related questions. Each question is answered on a 5-point Likert scale: 0 (not at all); 1 (a little bit); 2 (somewhat); 3 (quite a bit); and 4 (very much). The total score ranges from 0 to 52, where higher scores represent less fatigue, and a positive change from Baseline indicates improvement. The analysis was conducted in the ITT1 population with available data; a mixed effect model repeat measurement (MMRM) analysis with data from observed cases up to Week 8 was used except for measurements at or after the occurrence of UC-related corticosteroids intercurrent event were excluded.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Part 1: From first dose of study drug up to 30 days after the last dose or until first dose of study drug in Part 2 or first dose of study drug in M14-234 (maintenance study) or M14-533 (long term extension).

Adverse event reporting additional description:

Time Frame for Part 2: From the first dose of study drug in Part 2 up to 30 days after last dose or until first dose of study drug in M14-234 (maintenance study) or the first dose date of study drug in M14-533 (long-term extension study).

Assessment type	Systematic

### Reporting groups

Reporting group title	Part 1: Upadacitinib 45 mg
-----------------------	----------------------------

Reporting group description:

Participants received 45 mg upadacitinib once daily (QD) for 8 weeks.

Reporting group title	Part 1: Placebo
-----------------------	-----------------

Reporting group description:

Participants received placebo matching to upadacitinib once daily for 8 weeks.

Reporting group title	Part 2: Upadacitinib 45 mg / Upadacitinib 45 mg
-----------------------	---

Reporting group description:

Participants initially assigned to upadacitinib who did not achieve clinical response per Adapted Mayo score at Week 8 in Part 1 received upadacitinib 45 mg once daily for 8 additional weeks in the open-label extension period.

Reporting group title	Part 2: Placebo / Upadacitinib 45 mg
-----------------------	--------------------------------------

Reporting group description:

Participants initially assigned to placebo who did not achieve clinical response per Adapted Mayo score at Week 8 in Part 1 received upadacitinib 45 mg once daily for 8 weeks in the open-label extension period.

occurrences (all)	3		
Skin and subcutaneous tissue disorders			
ACNE			
subjects affected / exposed	6 / 116 (5.17%)		
occurrences (all)	6		

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 September 2018	Global amendment 1: <ul style="list-style-type: none"><li>• Clarified the study objective to outline both the primary and secondary endpoints.</li><li>• Enhanced various sections of the protocol to clarify expectations and create better understanding of the content.</li><li>• Enhanced the description of the DMC review, the contacts list and signatories were updated to reflect changes in study team administration.</li></ul>
24 April 2019	Global amendment 2: <ul style="list-style-type: none"><li>• Updating the study objective to include the secondary objectives.</li><li>• Updating the benefit risk language, modifying exclusion criterion #14 to allow for undetectable biologic levels to be measured via a commercially available assay as an alternative to the washout period, based on regulatory feedback.</li><li>• Adding the country-specific requirements in the inclusion/exclusion criteria (included 16 and 17-year-old subjects, where locally permitted).</li><li>• Adding, amending, and clarifying the study procedures.</li><li>• Adding justification for the use of placebo and further elaborating on the details of the DMC.</li></ul>
29 April 2020	Global amendment 3: <ul style="list-style-type: none"><li>• Updated wording about re-testing of exclusionary laboratory values during the screening period.</li><li>• Clarified intervals for testing biologic drug levels.</li><li>• Updated the criteria of clinical response for entering extended treatment period for subjects with missing Week 8 endoscopy when endoscopies cannot be performed due to the COVID-19 pandemic.</li><li>• Moved non-ranked secondary efficacy variables to additional efficacy variables.</li><li>• Added criteria for failure of ustekinumab treatment, added wording to define borderline serum pregnancy test results, clarified that live vaccines should not be administered for at least 30 days prior to or after study drug administration.</li><li>• Excluded subjects with a history of gastrointestinal perforation (perforation due to mechanical injury should not exclude a subject from participation).</li><li>• Prohibited cytapheresis treatment for 60 days prior to screening.</li><li>• Excluded subjects with prior history of thrombotic events including deep vein thrombosis and pulmonary embolism or known inherited conditions that predispose to hypercoagulability.</li><li>• Added wording about gastric banding/segmentation to make clear that it is not an exclusion.</li><li>• Added wording to the washout requirements for all biologic therapies.</li><li>• Removed wording about women classified as non-childbearing potential.</li><li>• Updated ECG review requirements.</li><li>• Updated the type of QuantiFERON TB test used.</li><li>• Updated toxicity management for aspartate aminotransferase (AST) and alanine aminotransferase (ALT), thrombosis events, and herpes zoster</li></ul>
31 July 2020	Global amendment 4: Updated information on the re-evaluation of the benefit and risk to subjects participating in the study, updated wording to allow for changes in visits and procedures affected by the COVID-19 pandemic and associated changes in global/local regulations.

Notes:
