

**Clinical trial results:**

MAXIMISE (Managing AXIal Manifestations in Psoriatic Arthritis with SEcukinumab), a randomized, double-blind, placebo-controlled, multicenter, 52 week study to assess the efficacy and safety of secukinumab 150 mg or 300 mg s.c. in patients with active psoriatic arthritis and axial skeleton involvement who have inadequate response to non steroidal anti-inflammatory drugs (NSAIDs)

General information about the trial

Main objective of the trial:

To demonstrate that secukinumab 300 mg s.c. is superior to placebo in the achievement of ASAS 20 response at Week 12.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Subject disposition

Recruitment

Recruitment details:

503 participants completed the screening period; as 5 participants were mis-randomized, the randomized set consists of 498 patients

Pre-assignment

Screening details:

95.9% of the randomized participants completed period 1 and continued to period 2; and 85.3% completed treatment period 2

Period 1

Period 1 title	Treatment Period 1 (overall period)
Is this the baseline period?	Yes

Secondary: Change from baseline in Health assessment questionnaire – disability index (HAQ-DI) score at week 12

End point title	Change from baseline in Health assessment questionnaire – disability index (HAQ-DI) score at week 12
-----------------	--

End point description:

The Health assessment questionnaire disability index (HAQ-DI) is a questionnaire for the assessment of Rheumatoid Arthritis. The questionnaire is a patient reported outcome (PRO) which is usually self-administered by the patient.

The following categories are assessed by the HAQ-DI:

dressing and grooming
 arising
 eating
 walking
 hygiene
 reach
 grip
 common daily activities

Patients report the amount of difficulty they have in performing some of these activities. Each question asks on a scale ranging from 0 to 3 if the categories can be performed without any difficulty (scale 0) up to cannot be done at all (scale 3)
