

## Clinical trial results:

### A Phase II, Randomized, Double-blind, Placebo-controlled Study of the Safety and Efficacy of GDC-0853 in Patients with Moderate to Severe Active Systemic Lupus

#### Summary

EudraCT number	2016-001039-11
Trial protocol	GB PT ES BG DE
Global end of trial date	16 July 2019

#### Results information

Result version number	v2 (current)
This version publication date	23 July 2020
First version publication date	11 June 2020
Version creation reason	

#### Trial information

##### Trial identification

Sponsor protocol code	GA30044
-----------------------	---------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02908100
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	F. Hoffmann-La Roche AG
Sponsor organisation address	Grenzacherstrasse 124, Basel, Switzerland, CH4070
Public contact	F. Hoffmann-La Roche AG, F. Hoffmann-La Roche AG, +41 616878333, global.trial_information@roche.com
Scientific contact	F. Hoffmann-La Roche AG, F. Hoffmann-La Roche AG, +41 616878333, global.trial_information@roche.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

---

**Results analysis stage**

Analysis stage	Final
Date of interim/final analysis	16 July 2019
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	16 July 2019
Was the trial ended prematurely?	No

Notes:

---

**General information about the trial**

Main objective of the trial:

To evaluate the safety and efficacy of GDC-0853.

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form.

Background therapy:

All Subjects were on immunosuppressants, antimalarials and/or corticosteroids.

Evidence for comparator: -

Actual start date of recruitment	19 January 2017
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	2 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

---

**Population of trial subjects****Subjects enrolled per country**

Country: Number of subjects enrolled	Argentina: 23
Country: Number of subjects enrolled	Brazil: 63
Country: Number of subjects enrolled	Bulgaria: 14
Country: Number of subjects enrolled	Chile: 37
Country: Number of subjects enrolled	Colombia: 43
Country: Number of subjects enrolled	Spain: 8
Country: Number of subjects enrolled	United Kingdom: 2
Country: Number of subjects enrolled	Germany: 6
Country: Number of subjects enrolled	Korea, Republic of: 2
Country: Number of subjects enrolled	Mexico: 14
Country: Number of subjects enrolled	China: 6
Country: Number of subjects enrolled	United States: 42
Worldwide total number of subjects	260
EEA total number of subjects	30

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	251
From 65 to 84 years	9
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study was conducted at 69 centers in 12 countries.

### Pre-assignment

Screening details:

An overall total of 616 subjects were screened into the study, of which 356 subjects were screen failures. 260 subjects (Intent-To-Treat/ITT population) were randomized into the study, of which 1 subject did not receive any study treatment meaning that the Safety population consisted of 259 subjects.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

Subjects received matching placebo to GDC-0853 orally starting on Day 1 and ending at Week 48, in combination with background standard of care therapy.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo matching GDC-0853 was administered.

<b>Arm title</b>	GDC-0853 (150mg) QD
------------------	---------------------

Arm description:

Subjects received GDC-0853 (150mg) orally once daily (QD) starting on Day 1 and ending at Week 48, in combination with background standard of care therapy.

Arm type	Experimental
Investigational medicinal product name	GDC-0853
Investigational medicinal product code	
Other name	Fenebrutinib
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

GDC-0853 was administered orally once daily (QD) at a dose of 150mg.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo matching GDC-0853 was administered.

<b>Arm title</b>	GDC-0853 (200mg) BID
Arm description:	
Subjects received GDC-0853 (200mg) orally twice daily (BID) starting on Day 1 and ending at Week 48, in combination with background standard of care therapy.	
Arm type	Experimental
Investigational medicinal product name	GDC-0853
Investigational medicinal product code	
Other name	Fenebrutinib
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

GDC-0853 was administered orally twice daily (BID) at a dose of 200mg.

<b>Number of subjects in period 1</b>	Placebo	GDC-0853 (150mg) QD	GDC-0853 (200mg) BID
Started	86	87	87
Completed	63	66	66
Not completed	23	21	21
Adverse event, serious fatal	2	-	-
Non-Compliance With Contraceptive Method	1	-	-
Consent withdrawn by subject	8	7	5
Physician decision	-	1	-
Adverse event, non-fatal	7	6	9
Pregnancy	1	2	-
Non-Compliance With Study Drug	1	1	2
Randomised in Error	1	-	-
Lost to follow-up	-	1	2
Lack of efficacy	2	3	3

## Baseline characteristics

### Reporting groups

Reporting group title	Placebo
Reporting group description:	
Subjects received matching placebo to GDC-0853 orally starting on Day 1 and ending at Week 48, in combination with background standard of care therapy.	
Reporting group title	GDC-0853 (150mg) QD
Reporting group description:	
Subjects received GDC-0853 (150mg) orally once daily (QD) starting on Day 1 and ending at Week 48, in combination with background standard of care therapy.	
Reporting group title	GDC-0853 (200mg) BID
Reporting group description:	
Subjects received GDC-0853 (200mg) orally twice daily (BID) starting on Day 1 and ending at Week 48, in combination with background standard of care therapy.	

Reporting group values	Placebo	GDC-0853 (150mg) QD	GDC-0853 (200mg) BID

## End points

### End points reporting groups

Reporting group title	Placebo
Reporting group description: Subjects received matching placebo to GDC-0853 orally starting on Day 1 and ending at Week 48, in combination with background standard of care therapy.	
Reporting group title	GDC-0853 (150mg) QD
Reporting group description: Subjects received GDC-0853 (150mg) orally once daily (QD) starting on Day 1 and ending at Week 48, in combination with background standard of care therapy.	
Reporting group title	GDC-0853 (200mg) BID
Reporting group description: Subjects received GDC-0853 (200mg) orally twice daily (BID) starting on Day 1 and ending at Week 48, in combination with background standard of care therapy.	
Subject analysis set title	Placebo (Safety-Evaluable Population)
Subject analysis set type	Safety analysis
Subject analysis set description: Subjects received matching placebo to GDC-0853 orally starting on Day 1 and ending at Week 48, in combination with background standard of care therapy. The Safety-evaluable population was defined as all subjects who received at least one dose of study medication. One subject in the Placebo arm was inadvertently dosed with GDC-0853 for a period of 27 days and was classified as part of the GDC-0853 (200mg) BID arm.	
Subject analysis set title	GDC-0853 (150mg) QD (Safety-Evaluable Population)
Subject analysis set type	Safety analysis
Subject analysis set description: Subjects received GDC-0853 (150mg) orally once daily (QD) starting on Day 1 and ending at Week 48, in combination with background standard of care therapy. The Safety-evaluable population was defined as all subjects who received at least one dose of study medication. One subject in the Placebo arm was inadvertently dosed with GDC-0853 for a period of 27 days and was classified as part of the GDC-0853 (200mg) BID arm.

Subject analysis set type	Safety analysis
Subject analysis set description: Subjects received GDC-0853 (200mg) orally twice daily (BID) starting on Day 1 and ending at Week 48, in combination with background standard of care therapy. The Safety-evaluable population was defined as all subjects who received at least one dose of study medication. One subject in the Placebo arm was inadvertently dosed with GDC-0853 for a period of 27 days and was classified as part of the GDC-0853 (200mg) BID arm.	
Subject analysis set title	Placebo (BICLA-Evaluable Population)
Subject analysis set type	Sub-group analysis
Subject analysis set description: Subjects received matching placebo to GDC-0853 orally starting on Day 1 and ending at Week 48, in combination with background standard of care therapy. The BICLA-evaluable population was defined as all ITT subjects who had at least one body system with moderate or severe disease activity at baseline as determined by BILAG-2004, i.e., at least one BILAG domain was scored as A or B at baseline.	
Subject analysis set title	GDC-0853 (150mg) QD (BICLA-Evaluable Population)
Subject analysis set type	Sub-group analysis
Subject analysis set description: Subjects received GDC-0853 (150mg) orally once daily (QD) starting on Day 1 and ending at Week 48, in combination with background standard of care therapy. The BICLA-evaluable population was defined as all ITT subjects who had at least one body system with moderate or severe disease activity at baseline as determined by BILAG-2004, i.e., at least one BILAG domain was scored as A or B at baseline.	
Subject analysis set title	GDC-0853 (200mg) BID (BICLA-Evaluable Population)
Subject analysis set type	Sub-group analysis

Subject analysis set description:

Subjects received GDC-0853 (200mg) orally twice daily (BID) starting on Day 1 and ending at Week 48, in combination with background standard of care therapy. The BICLA-evaluable population was defined as all ITT subjects who had at least one body system with moderate or severe disease activity at baseline as determined by BILAG-2004, i.e., at least one BILAG domain was scored as A or B at baseline.

### **Primary: Systemic Lupus Erythematosus Responder Index (SRI)-4 Response at Week 48**

End point title	Systemic Lupus Erythematosus Responder Index (SRI)-4 Response at Week 48
-----------------	--

End point description:

The Systemic Lupus Erythematosus Responder Index (SRI)-4 measures reduction in SLE disease activity and is a composite measure that includes the SLE Disease Activity Index (SLEDAI-2K), British Isles Lupus Activity Group (BILAG) 2004 and Physician Global Assessment. It is defined as: 1) Reduction of  $\geq 4$  points from baseline in Systemic Lupus Erythematosus Disease Activity Index 2000 (SLEDAI-2K) score; 2) no new British Isles Lupus Assessment Group (BILAG) A or no more than 1 new BILAG B disease activity scores and 3) no worsening (defined as an increase of  $\geq 0.3$  points [10 mm] from baseline) in the Physician's Global Assessment of Disease Activity. The score range is from 0 to 100, with higher scores indicating greater disease activity.

End point type	Primary

**Secondary: SRI-4 response with a sustained reduction of OCS dose to  $\leq 10$  mg/day and  $\leq$  Day 1 dose during Week 36 through 48 in patients with high vs. low plasmablast signature levels**

End point title	SRI-4 response with a sustained reduction of OCS dose to $\leq 10$ mg/day and $\leq$ Day 1 dose during Week 36 through 48 in patients with high vs. low plasmablast signature levels
-----------------	--

End point description:

The SRI-4 measures reduction in SLE disease activity and is defined as: 1) Reduction of  $\geq 4$  points from baseline in Systemic Lupus Erythematosus Disease Activity Index 2000 (SLEDAI-2K) score; 2) no new British Isles Lupus Assessment Group (BILAG) A or no more than 1 new BILAG B disease activity scores and 3) no worsening (defined as an increase of  $\geq 0.3$  points [10 mm] from baseline) in the Physician's Global Assessment of Disease Activity. The score range is from 0 to 100, with higher scores indicating greater disease activity. OCS tapering requires a sustained reduction of OCS from Week 36 through Week 48 [less than 10 milligram per day (mg/day) and less or equal to the dose received on Day 1]. Plasmablast Signature is a BTK-dependent blood RNA signature comprised of three genes (IgJ, MZB1 and TXNDC5). PBS LvL = Plasmablast Signature Level. Plac (n=X); 150 (n=X) and 200 (n=X) = Number of Subjects analysed in each arm at each Plasmablast Signature Level. Q=Quartile.

**Secondary: Percentage of Subjects With Adverse Events (AEs)**

End point title	Percentage of Subjects With Adverse Events (AEs)
-----------------	--

**End point description:**

An Adverse Event is any untoward medical occurrence in a subject administered a pharmaceutical product and which does not necessarily have to have a causal relationship with the treatment. An adverse event can therefore be any unfavorable and unintended sign (including an abnormal laboratory finding, for example), symptom, or disease temporally associated with the use of a pharmaceutical product, whether or not considered related to the pharmaceutical product. Preexisting conditions which worsen during a study are also considered as adverse events.

End point type	Secondary
----------------	-----------

**End point timeframe:**

Baseline up to 8 weeks after the last dose of study drug (up to Week 56).

**Secondary: Plasma Concentrations of Fenebrutinib at specified timepoints**

End point title	Plasma Concentrations of Fenebrutinib at specified timepoints <sup>[7]</sup>
-----------------	--

**End point description:**

The PK analyses includes tabulation of plasma concentration data and summarisation of plasma concentrations by visits with subjects grouped according to treatment received. Descriptive summary statistics for the Arithmetic Mean and Standard Deviation are presented below. The PK-evaluable population was defined as all subjects who received at least one dose of fenebrutinib (GDC-0853) and had at least 1 evaluable post-dose PK sample. 999 = Not Estimable. 150 (n=X); 200 (n=X) = Number of Subjects analysed in each arm at each timepoint.

End point type	Secondary
----------------	-----------

**End point timeframe:**

Baseline (Pre-dose), Week 24 (Pre-dose and Post-dose) and Week 48 (Pre-dose)

**Notes:**

[7] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: PK Analysis was only carried out on the treatment groups and not on the Placebo group.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Baseline up to 8 weeks after the last dose of study drug (up to Week 56).

Adverse event reporting additional description:

The Safety Population was defined as all subjects who received at least one dose of study medication. AEs that were entered into the database at the time of the database lock were included in the AE analysis.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 May 2017	Following updates were made: [1] Better characterisation of Primary SRI-4 endpoint, addition of an endpoint to better capture changes in skin and joint domains and endpoint has been added to assess improvement in Patient's Global Assessment at Weeks 24 and 48; [2] Extension of Screening period from 28 to 35 days; [3] Clarification of language on angiotensin converting enzyme inhibitors and angiotensin receptor blockers, steroid burst treatment and the SELENA-SLEDAI disease activity index being updated to SLEDAI-2K; [4] Update to timing of Interim analysis; [5] Updates to Eligibility criteria; [6] Clarification of language relating to dosing schedules, site responsibilities, injections of corticosteroids and dosage of antimalarials; [7] Update to Prohibited Therapies section; [8] Clarification of language around fasting requirements, requirements for chest radiography, SLE disease activity instruments, endpoints, training requirements and clinical manifestations, laboratory tests and reporting of terms and events; [9] Updates made to the Statistical Considerations and Analysis Plan and Schedule of Assessments and [10] Further updates made to the Appendices and Indexes.
09 February 2018	Following updates were made: [1] Modification to the Study Design Figure; [2] Updates and re-categorisation to SRI secondary efficacy endpoints; [3] Updates to PK objectives and endpoints; [4] Clarification to language for nonclinical efficacy data for the BTK inhibitor GDC-0834; [5] Update to minimum SLEDAI-2K score requirement for subjects to enrol in the study; [6] Updates to Inclusion/Exclusion criteria; [7] Updates to language regarding study drug administration, dosage and steroid burst treatment and tapering; [8] Updates to the Prohibited Therapies section and [9] Other updates including to the Hepatotoxicity language, analysis for Primary endpoint and PK, measurements to be carried out at Week 48 and PD Biomarkers.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
