

Clinical trial results:

A Phase II Trial of Capecitabine Rapidly Disintegrating Tablets and Concomitant Radiation Therapy in Children with Newly Diagnosed Brainstem Gliomas

Summary

EudraCT number	2016-001045-12
Trial protocol	Outside EU/EEA
Global end of trial date	23 April 2013

Results information

Result version number	v1 (current)
This version publication date	24 December 2016
First version publication date	24 December 2016

Trial information

Trial identification

Sponsor protocol code	NO21125
-----------------------	---------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01118377
WHO universal trial number (UTN)	-

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 April 2013
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	23 April 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To estimate the Progression-free Survival (PFS) distribution for newly diagnosed participants with intrinsic brainstem gliomas (IBSGs) treated with the combination of capecitabine pediatric film-coated tablets and radiation therapy (RT) and compare to Pediatric Brain Tumor Consortium (PBTC) historical controls

Protection of trial subjects:

This study was conducted in compliance with all applicable laws and regulations of the state and institution where the participant was treated, in accordance with the Declaration of Helsinki, and according to the guidelines in the protocol, including appendices.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	23 May 2007
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	3 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 45
Worldwide total number of subjects	45
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	37
Adolescents (12-17 years)	8
Adults (18-64 years)	0

From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

35 participants from study NO21125 and 10 participants from study NO18517 were enrolled, out of which 1 participant did not receive treatment.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Capecitabine + Radiation Therapy
-----------	----------------------------------

Arm description:

Participants received 9 weeks of capecitabine 650 milligram per square meter (mg/m²) orally (po) twice daily (bid) plus radiation therapy (180 centigray per day [cGy/day] 5 days a week, total target dose of 56 Gy) followed by a 2-week rest period. Participants then received 3 cycles of capecitabine 1250 mg/m² po bid for 14 days followed by a 7-day rest period without radiation therapy.

Arm type	Experimental
Investigational medicinal product name	Radiation Therapy
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Radionuclide generator
Routes of administration	Local use

Dosage and administration details:

Participants received 9 weeks of radiation therapy (180 cGy/day 5 days a week, total target dose of 56 Gy).

Investigational medicinal product name	Capecitabine
Investigational medicinal product code	RO0091978
Other name	Xeloda
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received 9 weeks of capecitabine 650 mg/m² po bid followed by a 2-week rest period. Participants then received 3 cycles of capecitabine 1250 mg/m² po bid for 14 days followed by a 7-day rest period.

Number of subjects in period 1	Capecitabine + Radiation Therapy
Started	45
Treated	44
Completed	3
Not completed	42
Did Not Receive Study Medication	1
Death	38

Failure to Return	3
-------------------	---

Baseline characteristics

Reporting groups

Reporting group title	Capecitabine + Radiation Therapy
-----------------------	----------------------------------

Reporting group description:

Participants received 9 weeks of capecitabine 650 milligram per square meter (mg/m²) orally (po) twice daily (bid) plus radiation therapy (180 centigray per day [cGy/day] 5 days a week, total target dose of 56 Gy) followed by a 2-week rest period. Participants then received 3 cycles of capecitabine 1250 mg/m² po bid for 14 days followed by a 7-day rest period without radiation therapy.

Reporting group values	Capecitabine + Radiation Therapy	Total	
Number of subjects	45	45	
Age categorical			
Units: Subjects			

Age continuous			
Baseline characteristics data were reported for 'treated' (44) participants.			
Units: years			
arithmetic mean	7.5		
standard deviation	± 3.69	-	
Gender categorical			
Units: Subjects			
Female	22	22	
Male	23	23	

End points

End points reporting groups

Reporting group title	Capecitabine + Radiation Therapy
Reporting group description: Participants received 9 weeks of capecitabine 650 milligram per square meter (mg/m ²) orally (po) twice daily (bid) plus radiation therapy (180 centigray per day [cGy/day] 5 days a week, total target dose of 56 Gy) followed by a 2-week rest period. Participants then received 3 cycles of capecitabine 1250 mg/m ² po bid for 14 days followed by a 7-day rest period without radiation therapy.	

Primary: Progression-free Survival (PFS)

End point title	Progression-free Survival (PFS) ^[1]
End point description: PFS was defined as time from initiation of treatment to the earliest date of failure (disease progression, death from any cause, or a second malignancy) or to the last assessment date for participants who did not fail. Disease progression was defined as progressive neurologic abnormalities or worsening neurologic status not explained by causes unrelated to tumor progression (e.g., anticonvulsant or corticosteroid toxicity, electrolyte disturbances, sepsis, hyperglycemia, weaning of steroids, radiation necrosis etc.); or greater than 25% increase in bi-dimensional measurement of tumor, as compared with previous scan; or appearance of new lesion; or increase in doses of dexamethasone required to maintain stable neurologic status or imaging. Kaplan-Meier estimates were used. All participants enrolled in Study NO21125 who were considered eligible by Pediatric Brain Tumor Consortium (PBTC) and received at least 1 dose of capecitabine were included in intent-to-treat (ITT) population.	
End point type	Primary
End point timeframe: Baseline to the end of the study (up to approximately 2 years)	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis was planned for this study.

End point values	Capecitabine + Radiation Therapy			
Subject group type	Reporting group			
Number of subjects analysed	44			
Units: months				
median (confidence interval 95%)	4.9 (4.5 to 6)			

Statistical analyses

No statistical analyses for this end point

Secondary: Overall Survival (OS)

End point title	Overall Survival (OS)
End point description: Overall survival was defined as the time from the initiation of therapy to the date of death from any cause or to the date the participant was last known to be alive for surviving participants. Kaplan-Meier estimates were used for evaluation. ITT population.	
End point type	Secondary

End point timeframe:

Baseline to the end of the study (up to approximately 2 years)

End point values	Capecitabine + Radiation Therapy			
Subject group type	Reporting group			
Number of subjects analysed	44			
Units: months				
median (confidence interval 95%)	10.3 (7.7 to 12.9)			

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Participants With a Best Tumor Response of Complete Response (CR) or Partial Response (PR)

End point title	Percentage of Participants With a Best Tumor Response of Complete Response (CR) or Partial Response (PR)
-----------------	--

End point description:

Tumor response was defined as either a CR or a PR prior to failure (disease progression, death from any cause, or a second malignancy). CR was defined as the complete disappearance on magnetic response imaging of all enhancing tumor and mass effect on a stable or decreasing dose of dexamethasone (or only receiving adrenal replacement doses) accompanied by a stable or improving neurologic examination that was maintained for at least 12 weeks. PR was defined as a greater than or equal to 50% reduction in tumor size by bi-dimensional measurement on a stable or decreasing dose of dexamethasone accompanied by a stable or improving neurologic examination that was maintained for at least 12 weeks. ITT population.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline to the end of the study (up to approximately 2 years)

End point values	Capecitabine + Radiation Therapy			
Subject group type	Reporting group			
Number of subjects analysed	44			
Units: percentage of participants				
number (confidence interval 95%)	2.3 (0.1 to 12)			

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline up to 30 days after the last treatment (up to approximately 2 years)

Adverse event reporting additional description:

Safety population: All enrolled participants who received at least 1 dose of capecitabine. One of the 45 participants did not receive treatment and was not included in the safety population.

Assessment type	Non-systematic

Hypocalcaemia subjects affected / exposed occurrences (all)	17 / 44 (38.64%) 33		
Hypermagnesaemia subjects affected / exposed occurrences (all)	16 / 44 (36.36%) 30		
Hyperglycaemia subjects affected / exposed occurrences (all)	15 / 44 (34.09%) 23		
Hyponatraemia subjects affected / exposed occurrences (all)	16 / 44 (36.36%) 25		
Hypophosphataemia subjects affected / exposed occurrences (all)	14 / 44 (31.82%) 23		
Decreased appetite subjects affected / exposed occurrences (all)	11 / 44 (25.00%) 12		
Hypercalcaemia subjects affected / exposed occurrences (all)	8 / 44 (18.18%) 17		
Hypernatraemia			

subjects affected / exposed	5 / 44 (11.36%)		
occurrences (all)	6		
Hypoglycaemia			
subjects affected / exposed	4 / 44 (9.09%)		
occurrences (all)	5		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 April 2010	In addition to administrative changes, correction of errata and clarifications, the pharmacokinetic (PK) sampling schedule was changed (and it was stipulated that the exact time of PK sampling be recorded for PK modeling) and the age range for participation in the PK sub-study was removed.
16 April 2010	Administrative changes
06 June 2011	Administrative changes, clarifications and edits were introduced.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
