Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 December 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	12 October 2020
Global end of trial reached?	Yes
Global end of trial date	12 October 2020
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to evaluate the failure rate of the strategy 16 months after randomization. Failure of the strategy was defined as: Progression (defined in each arm)* using RECIST v1.1 criteria or Death (all causes) or Toxicity leading to permanent discontinuation of one of the chemotherapy drugs (oxaliplatin and irinotecan) or Patient refusal to continue the strategy or Investigator's decision to discontinue the strategy.

Protection of trial subjects:

This trial was conducted in accordance with the New European Directive 2001/20/EC. The investigator undertook to obtain the patient's consent for the clinical and biological studies in writing, after providing adequate information.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 September 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 21
Worldwide total number of subjects	21

Subject disposition

Recruitment

Recruitment details:

Between 15 Septembre 2016 and 10 April 2018, 21 patients were randomized by 9 french centers

Pre-assignment

Screening details:

After checking the inclusion and non-inclusion criteria, patients were randomized to the protocol. Main eligible criteria were histologically proven, non resectable mCRC, BRAF non mutated patients, WHO-OMS less of equal to 2, at least one measurable lesion according to RECIST 1.1 and able to receive the treatments

Period 1

Period 1 title	Baseline (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Arm A: escalation strategy

Arm description:

Patients started the strategy with a first chemotherapy regimen consisting of LV5FU2 (or capecitabine) + bevacizumab. After progression, they received a second chemotherapy regimen consisting of FOLFIRI + bevacizumab. After progression, they received a third chemotherapy regimen consisting of FOLFOX4 + bevacizumab.

When progression occurred during the third chemotherapy or if the third chemotherapy was not administered, patients were treated according to the investigator's choice.

The duration of a chemotherapy cycle was 14 days or 21 days if the patient received capecitabine instead of LV5FU.

Arm type	Active comparator
Investigational medicinal product name	LV5FU2
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

5FU bolus was administered at 400 mg/m² (at D1).

5FU continu was administered in IV at the dosage of 2400 mg/m² over 46 hour (D1 and D2).

Investigational medicinal product name	bevacizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Bevacizumab was administered intravenously before chemotherapy at a dose of 5 mg/kg over 90 minutes in cycle 1, then, if well tolerated, over 60 minutes in cycle 2 and over 30 minutes in subsequent cycles.

Investigational medicinal product name	Irinotecan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:	
Irinotecan was administered intravenously at a dose of 180 mg/m ² over 90 minutes.	
Investigational medicinal product name	Oxaliplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Oxaliplatin was administered intravenously at a dose of 85 mg/m² over 120 minutes.

Arm title	Arm B: de-escalation strategy
------------------	-------------------------------

Arm description:

Patients received 4 cycles of modified FOLFOXIRI + bevacizumab, followed by 4 cycles of FOLFIRI + bevacizumab, then maintenance treatment with capecitabine/LV5FU2 and bevacizumab until progression.

After progression during maintenance treatment, the patient was treated with 4 cycles of modified FOLFOXIRI + bevacizumab, followed by 4 cycles of FOLFIRI + bevacizumab, followed by maintenance treatment with capecitabine and bevacizumab until progression, etc. The duration of a chemotherapy cycle was 14 days for maintenance cycles with LV5FU2 and 21 days for maintenance cycles with capecitabine.

If progression occurred during treatment with modified FOLFOXIRI + bevacizumab or FOLFIRI + bevacizumab, patients were considered to have failed the strategy and was treated according to the investigator's choice.

Arm type	Experimental
Investigational medicinal product name	LV5FU2
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

5FU bolus was administered at 400 mg/m² (at D1).

5FU continu was administered in IV at the dosage of 2400 mg/m² over 46 hour (D1 and D2).

Investigational medicinal product name	bevacizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Bevacizumab was administered intravenously before chemotherapy at a dose of 5 mg/kg over 90 minutes in cycle 1, then, if well tolerated, over 60 minutes in cycle 2 and over 30 minutes in subsequent cycles.

Investigational medicinal product name	Irinotecan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Irinotecan was administered intravenously at a dose of 180 mg/m² over 90 minutes.

Investigational medicinal product name	Oxaliplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Oxaliplatin was administered intravenously at a dose of 85 mg/m² over 120 minutes.

Primary: Rate of patients with strategy failure at 16 months

End point title	Rate of patients with strategy failure at 16 months ^[1]
End point description: The failure rate of the strategy at 16 months after randomization was calculated based on the investigator's assessment at 16 months (+/- 30 days). Failure of the strategy was defined by: 1/Progression (defined in each arm) using RECIST v1.1 criteria or 2/Death (all causes) or 3/Toxicity leading to permanent discontinuation of one of the chemotherapy products (oxaliplatin and irinotecan) or 4/ Patient refusal to continue the strategy or 5/Investigator's decision to discontinue the strategy.	
End point type	Primary
End point timeframe: 16 months after the randomization	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: The study was a non-comparative study and was stopped prematurely at 21 patients. That's why no statistical analyses was done.
