

Clinical trial results:

A Prospective, Randomized, Open Label, Multi-center Study of the Safety and Pharmacokinetics of Apixaban versus Vitamin K Antagonist or LMWH in Pediatric Subjects with Congenital or Acquired Heart Disease Requiring Chronic Anticoagulation for Thromboembolism Prevention

Summary

EudraCT number	2016-001247-39
Trial protocol	DE GB IT FI AT ES
Global end of trial date	18 October 2021

Results information

Result version number	v1 (current)
This version publication date	25 April 2022
First version publication date	25 April 2022

Trial information

Trial identification

Sponsor protocol code	CV185-362

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000183-PIP01-08
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 November 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	18 October 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the safety of apixaban, compared to VKA or subcutaneous LMWH and to evaluate apixaban PK in pediatric subjects with congenital or acquired heart disease requiring chronic anticoagulation for thromboprophylaxis.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization Good Clinical Practice Guidelines. All the local regulatory requirements pertinent to safety of trial participants were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	19 January 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 21
Country: Number of subjects enrolled	Austria: 7
Country: Number of subjects enrolled	Brazil: 5
Country: Number of subjects enrolled	Canada: 11
Country: Number of subjects enrolled	Finland: 6
Country: Number of subjects enrolled	Germany: 18
Country: Number of subjects enrolled	Israel: 1
Country: Number of subjects enrolled	Italy: 22
Country: Number of subjects enrolled	Mexico: 16
Country: Number of subjects enrolled	Russian Federation: 2
Country: Number of subjects enrolled	United Kingdom: 13
Country: Number of subjects enrolled	United States: 70
Worldwide total number of subjects	192
EEA total number of subjects	53

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	11
Children (2-11 years)	134
Adolescents (12-17 years)	47
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

192 participants were randomized and 188 were treated for up to 12 months or until anticoagulation is no longer needed, whichever is shorter

Period 1

Period 1 title	Pre-treatment Period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Apixaban

Arm description:

Participants receive thromboprophylaxis with open-label apixaban for up to 12 months or until the need for anticoagulant is resolved, whichever occurs first. Participants weighing between ≥ 3 and < 35 kg will be administered apixaban twice daily (BID) in doses between 0.2mg and 4 mg depending on body weight. Children randomized to the apixaban arm of the study weighing ≥ 35 kg will be administered apixaban 5 mg twice daily (BID).

Arm type	Experimental
Investigational medicinal product name	Apixaban
Investigational medicinal product code	
Other name	BMS-562247-01
Pharmaceutical forms	Capsule, Film-coated tablet, Oral solution
Routes of administration	Oral use, Nasogastric use , Gastric use

Dosage and administration details:

Children between 3 and < 35 kg will be administered apixaban twice daily (BID) in doses between 0.2 mg and 4 mg depending on body weight with the 0.1 capsules, 0.5 mg mini-tablets, or oral solution. Children randomized to the apixaban arm of the study weighing ≥ 35 kg will be administered apixaban 5 mg twice daily (BID) as a tablet or solution.

Arm title	LMWH/VKA
------------------	----------

Arm description:

Participants receive thromboprophylaxis with Vitamin K Antagonists (VKA) or Low Molecular Weight Heparin (LMWH) for up to 12 months or until the need for anticoagulant is resolved, whichever occurs first. Participants who receive LMWH are allowed to switch to VKA at any time during the study; conversely, participants having difficulty with VKA may switch to LMWH.

Arm type	Experimental
Investigational medicinal product name	Warfarin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Use of VKA or LMWH will follow the local standard of care that is aligned with the ACCP guidelines. The dose of VKA is recommended to be titrated to achieve a target international normalized ratio (INR) of 2.0 to 3.0, and the dose of LMWH is recommended to target an anti-Xa level between 0.5 and 1.0 units/mL.

Investigational medicinal product name	Enoxaparin sodium (Clexane)
Investigational medicinal product code	
Other name	

Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use
Dosage and administration details:	
Use of VKA or LMWH will follow the local standard of care that is aligned with the ACCP guidelines. The dose of VKA is recommended to be titrated to achieve a target international normalized ratio (INR) of 2.0 to 3.0, and the dose of LMWH is recommended to target an anti-Xa level between 0.5 and 1.0 units/mL.	
Investigational medicinal product name	Enoxaparin sodium
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Use of VKA or LMWH will follow the local standard of care that is aligned with the ACCP guidelines. The dose of VKA is recommended to be titrated to achieve a target international normalized ratio (INR) of 2.0 to 3.0, and the dose of LMWH is recommended to target an anti-Xa level between 0.5 and 1.0 units/mL.

Primary: Composite of Adjudicated Major or Clinically Relevant Non-Major (CRNM) Bleeding Events

End point title	Composite of Adjudicated Major or Clinically Relevant Non-Major (CRNM) Bleeding Events ^[1]
End point description:	
The number of participants with adjudicated major or CRNM bleeding events per the Perinatal and Paediatric Haemostasis Subcommittee of International Society on Thrombosis and Haemostasis (ISTH) criteria. Events are adjudicated by a blinded, independent events adjudication committee (EAC).	
Major bleeding satisfies one or more of the following criteria: fatal bleeding, clinically overt bleeding associated with a decrease in hemoglobin of at least 20 g/L (i.e., 2 g/dL) in a 24-hour period, bleeding that is retroperitoneal, pulmonary, intracranial, or otherwise involves the CNS, or bleeding that requires surgical intervention in an operating suite, including interventional radiology.	
CRNM bleeding satisfies one or both of the following criteria: overt bleeding for which blood product is administered and not directly attributable to the subject's underlying medical condition or bleeding that requires medical or surgical intervention to restore hemostasis, other than in an operating room.	
End point type	Primary
End point timeframe:	
From first dose to 2 days after last dose (Up to approximately 12 months)	
Notes:	
[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Secondary: The Child and Parent Reports of Pediatric Quality of Life Inventory (PedsQL)

End point title	The Child and Parent Reports of Pediatric Quality of Life Inventory (PedsQL)
-----------------	--

End point description:

Subjects' quality of life was measured using the PedsQL instrument administered only to English-speaking children/parents. Only subjects who completed the questionnaires at both baseline and post-baseline visits were included in the analyses.

PedsQL consists of 23 items scored on a 5-point Likert scale from 0 (never) to 4 (almost always) or for the child report for younger children ages 5-7, a 3-point Likert scale: 0 (Not at all), 2 (Sometimes), and 4 (A lot).

Scores are reverse scored and transformed to a 0-100 scale as follows: 0=100, 1=75, 3=25, 4=0. Higher scores indicate a better HRQOL and/or lower problems.

Secondary: Kids Informed Decrease Complications Learning on Thrombosis (KIDCLOT) IMPACT Score

End point title	Kids Informed Decrease Complications Learning on Thrombosis (KIDCLOT) IMPACT Score
-----------------	--

End point description:

Subjects' quality of life was measured using the KIDCLOT instrument administered only to English-speaking children/parents. Only subjects who completed the questionnaires at both baseline and post-baseline visits were included in the analyses.

KIDCLOT Parent inventory uses a 5 point Likert scale from 1 (N/A), 2 (Never), 3 (Rarely), 4 (Now and then), 5 (Often). Child inventory uses a 4 point Likert scale 1 (N/A), 2 (Never), 3 (Now and then), 5 (Always). Values are scores as follows 1=0, 2=1, 3=2, 4=3, 5=4. Score interpretation is 0 to 100 percent IMPACT of anticoagulation on a child's life therefore, higher scores indicates a more negative effect.

Dictionary version	24.1
--------------------	------

Reporting groups

Reporting group title	VKA/LMWH
-----------------------	----------

Reporting group description:

Participants receive thromboprophylaxis with Vitamin K Antagonists (VKA) or Low Molecular Weight Heparin (LMWH) for up to 12 months or until the need for anticoagulant is resolved, whichever occurs first. Participants who receive LMWH are allowed to switch to VKA at any time during the study; conversely, participants having difficulty with VKA may switch to LMWH.

Reporting group title	APIXABAN
-----------------------	----------

Reporting group description:

Participants receive thromboprophylaxis with open-label apixaban for up to 12 months or until the need for anticoagulant is resolved, whichever occurs first. Participants weighing between ≥ 3 and < 35 kg will be administered apixaban twice daily (BID) in doses between 0.2mg and 4 mg depending on body weight. Children randomized to the apixaban arm of the study weighing ≥ 35 kg will be administered apixaban 5 mg twice daily (BID).
