Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	02 April 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	02 April 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The aim of this study was to find out about the safety and effectiveness of M2951 in subjects with relapsing multiple sclerosis. Subjects were placed into 1 of 3 groups to receive M2951, placebo or tefidera for 24 weeks. After 24 weeks, the subjects on placebo were given M2951.

Protection of trial subjects:

Subject protection was ensured by following high medical and ethical standards in accordance with the principles laid down in the Declaration of Helsinki, and that are consistent with Good Clinical Practice and applicable regulations.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	07 March 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Bulgaria: 47
Country: Number of subjects enrolled	Czechia: 26
Country: Number of subjects enrolled	Poland: 83
Country: Number of subjects enrolled	Russian Federation: 19
Country: Number of subjects enrolled	Serbia: 17
Country: Number of subjects enrolled	Slovakia: 10
Country: Number of subjects enrolled	Ukraine: 62
Country: Number of subjects enrolled	Spain: 3
Worldwide total number of subjects	267
EEA total number of subjects	169

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	267
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

The study consisted of a 24-week active treatment period, 24-week blinded extension (BE) period and a 336-week open-label extension period. A total of 333 subjects with Relapsing Multiple Sclerosis (RMS) were screened, and 267 subjects were randomized and received treatment in the study.

Period 1

Period 1 title	Active Treatment Period (24 Weeks)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo (period 1)

Arm description:

Subjects received placebo matched to Evobrutinib tablet orally for 24 weeks in active treatment period 1.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received placebo matched to Evobrutinib tablet orally for 24 weeks in active treatment period 1.

Arm title	Evobrutinib 25 mg QD (Period 1 and 2)
------------------	---------------------------------------

Arm description:

Subjects received Evobrutinib 25 mg orally, QD up to Week 48 in active treatment period 1 and BE period.

Arm type	Experimental
Investigational medicinal product name	Evobrutinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received Evobrutinib 25 mg orally, QD up to Week 48 in active treatment period 1 and BE period.

Arm title	Evobrutinib 75 mg QD (Period 1 and 2)
------------------	---------------------------------------

Arm description:

Subjects received Evobrutinib 75 mg orally, QD up to Week 48 in active treatment period 1 and BE period.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Evobrutinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received Evobrutinib 75 mg orally, QD up to Week 48 in active treatment period 1 and BE period.

Arm title	Evobrutinib 75 mg BID (Period 1 and 2)
------------------	--

Arm description:

Subjects received Evobrutinib 75 mg orally, twice daily (BID) up to Week 48 in active treatment period 1 and BE period.

Arm type	Experimental
Investigational medicinal product name	Evobrutinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received Evobrutinib 75 mg orally, twice daily (BID) up to Week 48 in active treatment period 1 and BE period.

Arm title	Tecfidera (Period 1 and 2)
------------------	----------------------------

Arm description:

Subjects received Tecfidera 120 mg twice daily (BID) for first 7 days followed by 240 mg orally, BID up to Week 48 in active treatment period 1 and BE period.

Arm type	Experimental
Investigational medicinal product name	Tecfidera
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Subjects received Tecfidera 120 mg twice daily (BID) for first 7 days followed by 240 mg orally, BID up to Week 48 in active treatment period 1 and BE period.

Number of subjects in period 1	Placebo (period 1)	Evobrutinib 25 mg QD (Period 1 and 2)	Evobrutinib 75 mg QD (Period 1 and 2)
Started	54	52	53
Completed	49	47	48
Not completed	5	5	5
Consent withdrawn by subject	-	3	3
Adverse event, non-fatal	4	2	2

Period 2

Period 2 title	Blinded Extension Period (24 Weeks)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo Then Evobrutinib 25 mg QD (Period 2)

Arm description:

Subjects who received placebo matched to Evobrutinib tablet orally for 24 weeks in active treatment period 1 received Evobrutinib 25 milligram (mg) orally, once daily (QD) in blinded extension (BE) period from week 25 to week 48.

Arm type	Experimental
Investigational medicinal product name	Placebo +Evobrutinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects who received placebo matched to Evobrutinib tablet orally for 24 weeks in active treatment period 1 received Evobrutinib 25 milligram (mg) orally, once daily (QD) in blinded extension (BE) period from week 25 to week 48.

Arm title	Evobrutinib 25 mg QD (Period 1 and 2)
------------------	---------------------------------------

Arm description:

Subjects received Evobrutinib 25 mg orally, QD up to Week 48 in active treatment period 1 and BE period.

Arm type	Experimental
Investigational medicinal product name	Evobrutinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received Evobrutinib 25 mg orally, QD up to Week 48 in active treatment period 1 and BE period.

Arm title	Evobrutinib 75 mg QD (Period 1 and 2)
------------------	---------------------------------------

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Only 213 subjects started the OLE period.

Secondary: Annualized relapse rate (ARR) at Week 24

End point title	Annualized relapse rate (ARR) at Week 24
End point description:	
A qualifying relapse is defined as new, worsening or recurrent neurological symptoms attributed to Multiple Sclerosis (MS) that last for at least 24 hours without fever or infection, or adverse reaction to prescribed medication, preceded by a stable or improving neurological status of at least 30 days. As per planned analysis, Tecfidera treatment group was not included in inferential analysis. The modified ITT (mITT) analysis set consists of all subjects who belong to both the ITT and safety analysis sets, and who have at least one baseline and one post-baseline magnetic resonance imaging (MRI) assessment.

Secondary: Qualified Relapse-Free Status at Week 24

End point title	Qualified Relapse-Free Status at Week 24
End point description:	<p>A qualifying relapse is defined as new, worsening or recurrent neurological symptoms attributed to Multiple Sclerosis (MS) that last for at least 24 hours without fever or infection, or adverse reaction to prescribed medication, preceded by a stable or improving neurological status of at least 30 days. Percentage of subjects with qualified relapse-free status at week 24 were reported. As per planned analysis, Tecfidera treatment group was not included in inferential analysis. The modified ITT (mITT) analysis set consists of all subjects who belong to both the ITT and safety analysis sets, and who have at least one baseline and one post-baseline magnetic resonance imaging (MRI) assessment.</p>

Secondary: Change From Baseline in Expanded Disability Status Scale (EDSS) at Week 24

End point title	Change From Baseline in Expanded Disability Status Scale (EDSS) at Week 24
-----------------	--

End point description:

The EDSS is an ordinal clinical rating scale in half-point increments. It assesses the following eight functional systems, areas of the central nervous system that control bodily functions: Pyramidal (ability to walk), Cerebellar (coordination), Brain stem (speech and swallowing), Sensory (touch and pain), Bowel and bladder functions, Visual, Mental, Other (includes any other neurological findings due to Multiple Sclerosis [MS]). EDSS overall score ranging from 0 (normal) to 10 (death due to MS). As per planned analysis, Tecfidera treatment group was not included in inferential analysis. mITT analysis set was used.

Secondary: Number of Subjects With Treatment-emergent Adverse Events (TEAEs), Serious TEAEs and TEAEs Leading to Death

End point title	Number of Subjects With Treatment-emergent Adverse Events (TEAEs), Serious TEAEs and TEAEs Leading to Death
-----------------	---

End point description:

AE: any untoward medical occurrence in a subject which does not necessarily have a causal relationship with study drug. An AE was defined as any unfavorable and unintended sign (including an abnormal laboratory finding), symptom, or disease temporally associated with the use of study drug, whether or not considered related to the study drug or worsening of pre-existing medical condition, whether or not related to study drug. SAE: AE that resulted in any of following outcomes: death; life threatening; persistent/significant disability/incapacity; initial or prolonged inpatient hospitalization; congenital anomaly/birth defect or was otherwise considered medically important. TEAEs: any adverse event with a start date on or after the date of first dose and within 28 days after the date of last dose in the study. TEAEs included both Serious TEAEs and non-serious TEAEs. Safety analysis set included of all subjects who received at least 1 dose of evobrutinib or placebo or Tecfidera.

End point description:

A qualifying relapse is defined as new, worsening or recurrent neurological symptoms attributed to Multiple Sclerosis (MS) that last for at least 24 hours without fever or infection, or adverse reaction to prescribed medication, preceded by a stable or improving neurological status of at least 30 days. The modified ITT (mITT) analysis set consists of all subjects who belong to both the ITT and safety analysis sets, and who have at least one baseline and one post-baseline magnetic resonance imaging (MRI) assessment.

Secondary: OLE Period: Absolute Concentrations of Immunoglobulin (Ig) Levels

End point title	OLE Period: Absolute Concentrations of Immunoglobulin (Ig) Levels
-----------------	---

End point description:

Absolute Concentrations serum levels of IgG, IgA, IgM were assessed. The Safety OLE Analysis Set included all subjects who receive at least 1 dose of Evobrutinib during the OLE. Here, "Overall Number of Subjects Analyzed" = subjects evaluable for this endpoint and "n" = subjects who were evaluable for the specified category. Results reported are for OLE period only and no subjects took placebo during this period.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 November 2017	<ul style="list-style-type: none">• Addition of 2-week safety visits for chemistry monitoring (including ALT, AST, alkaline phosphatase, GGT, and bilirubin) until the IDMC determines the optimum monitoring interval for participant randomized to the M2951/placebo arm;• Addition of a comprehensive hepatic panel for participants randomized to the M2951/placebo arm for whom withdrawal criteria are met or who permanently discontinue dosing because of elevated transaminases;• Addition of blood tests (ESR, hsCRP, and fibrinogen) for all participants at any 1 point during the trial;• Addition of Open-label extension period, with modifications to planned trial period, addition of objective and endpoints, addition of statistical analyses and analysis set, addition of informed consent prior to participation, and clarification that there will be a second clinical trial report;• Addition of pharmacokinetic endpoints and statistical analyses• Clarification of pharmacodynamics endpoints• Clarification that separate informed consent will be collected for the MRI dummy run;• Clarification that soluble factors may be measured from pharmacokinetic blood samples if there is sufficient volume;• Clarification that blood pressure will be collected in a semisupine position;
29 May 2018	<ul style="list-style-type: none">• Update exploratory endpoints;• Remove Futility analyses (also referred to as interim analyses)• Remove 2-week additional safety visits after Week 16 and update to a monthly (4-week) schedule;• Clarify that phone calls for confirmation of home pregnancy testing is required only if urine pregnancy tests are completed at home;• Include monthly urine pregnancy tests for all sites in all countries during the main study and OLE period;• Clarify the schedule of collection of additional PK samples;
08 August 2018	To include recommendations from the Czech Republic Regulatory Authority on reinitiating IMP following increase in AST, ALT, or bilirubin to Grade 2.
21 November 2018	<ul style="list-style-type: none">• Based on the efficacy and safety data from the primary analysis at 24 weeks and the blinded extension analysis at 48 weeks, the optimal tested dose is 75 mg twice daily.• Increased liver monitoring was added following an urgent safety measure.• Provide direction to sites to consult with Medical Monitor regarding potential withdrawal, continued participation in study, additional monitoring, and retesting.• Updated liver enzyme stopping criteria to ensure the safety of the patients within the study.
08 November 2019	To extend the optional open-label extension period of the study by 5 years (60 months), to allow patients continued access to study treatment and long-term characterization of the study drug in patients with relapsing multiple sclerosis. The Sponsor evaluated the duration of the extension on an annual basis.
02 December 2022	To include an opportunity for participants who completed their treatment under the current protocol to transition into the long-term follow-up study under a new protocol allowing continued access to study treatment. Additionally, the prohibited medicines section was revised to include an additional concomitant therapeutic option, as well as other prohibited medications.

06 July 2023	<ul style="list-style-type: none"> • To reflect the recent update to the risk profile of evobrutinib (i.e., important identified risk of drug-induced liver injury) by adapting monitoring and discontinuation criteria, as well as language on tolerability and safety of evobrutinib across the protocol. • To extend the OLE period by up to one additional year to allow an opportunity for participants to transition into the long-term follow-up study under a new protocol.
--------------	---

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Reported p values are not adjusted for multiple testing.
