Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001855-PIP01-15
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 August 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	14 July 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of fitusiran compared to on-demand treatment with factor concentrates, as determined by the frequency of bleeding episodes.

Protection of trial subjects:

The study was conducted by investigators experienced in the treatment of adults and adolescents subjects. The parent(s) or guardian(s) as well as the children were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time. In addition to the consent form for the parent(s)/guardian(s), an assent form in child-appropriate language was provided and explained to the child. Repeated invasive procedures were minimised. The number of blood samples as well as the amount of blood drawn were adjusted according to age and weight. A topical anesthesia may have been used to minimise distress and discomfort. Adult subjects were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time in language and terms appropriate for the subject and considering the local culture. During the course of the trial, subjects were provided with individual subject cards indicating the nature of the trial the subject is participating, contact details and any information needed in the event of a medical emergency. Collected personal data and human biological samples were processed in compliance with the Sanofi-Aventis Group Personal Data Protection Charter ensuring that the Group abides by the laws governing personal data protection in force in all countries in which it operates.

Background therapy:

Long term follow-up: The follow-up period lasted from 1 to 6 months (as follow-up for subjects in the fitusiran treatment arm who did not enroll in the extension study (LTE15174: NCT03754790), due to the requirement for the antithrombin (AT) activity level to return to approximately 60% following the final dose). In lieu of the long term follow-up period, subjects who completed the study were eligible to enroll in an open-label extension study (LTE15174).

Evidence for comparator: -

Actual start date of recruitment	01 March 2018
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	South Africa: 5
Country: Number of subjects enrolled	Denmark: 1
Country: Number of subjects enrolled	Japan: 1

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	14
Adults (18-64 years)	104
From 65 to 84 years	2
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 64 centres in 19 countries. A total of 177 subjects were screened between 1 March 2018 to 22 May 2020, of which 57 subjects were screen failure. Screen failures were mainly due to presence of a co-existing thrombophilic disorder. In total, 120 subjects were enrolled in the study.

Pre-assignment

Screening details:

120 subjects were randomised in 2:1 ratio to fitusiran prophylaxis and on-demand arms by interactive response system; stratified by the number of bleeding episodes in the 6 months prior to Screening (less than or equal to [\leq 10] versus [vs] greater than [$>$]10) and by haemophilia type (haemophilia A or B).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Factor On-demand

Arm description:

Subjects received on-demand factor concentrates (as needed, for episodic bleeding episodes, and not on a regular regimen intended to prevent spontaneous bleeding) per Investigator discretion for the treatment of breakthrough bleeding episodes from Day 1 up to a total of 9 months.

Arm type	Experimental
Investigational medicinal product name	Factor On-demand
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous bolus use

Dosage and administration details:

Per Investigator discretion from Day 1 for treatment of breakthrough bleeding episodes, up to a total of 9 months.

Arm title	Fitusiran 80 mg Prophylaxis
------------------	-----------------------------

Arm description:

Subjects received open-label fitusiran 80 milligram (mg) administered subcutaneously (SC) as prophylaxis once monthly from Day 1 up to a total of 9 months. Subjects received on-demand factor concentrates (per investigator's discretion and within bleeding dosing guidelines) for the treatment of breakthrough bleeding episodes.

Arm type	Experimental
Investigational medicinal product name	Fitusiran
Investigational medicinal product code	SAR439774
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Fitusiran as an SC injection once monthly, dosing started on Day 1 of the treatment period for a total of 9 months.

Number of subjects in period 1	Factor On-demand	Fitusiran 80 mg Prophylaxis
Started	40	80
Treated	40	79
Completed	37	79
Not completed	3	1
Consent withdrawn by subject	1	1
Adverse event, non-fatal	1	-
Protocol deviation	1	-

Primary: Estimated Annualised Bleeding Rate (ABR) for Treated Bleeds During the Efficacy Period

End point title	Estimated Annualised Bleeding Rate (ABR) for Treated Bleeds During the Efficacy Period
End point description:	
ABR for subject during efficacy period (EP): annualised number of bleeding episodes during EP annualised to a 1-year interval of time. Treated Bleeding episode: any occurrence of haemorrhage that required administration of by-passing agents (BPA) or factor. It started from first sign of bleed and ended no more than 72 hours after last treatment for bleed, within which any symptoms of bleeding at same location or injections less than or equal to (\leq) 72 hours apart were considered same bleeding episode. EP was defined as time duration starting from Day 29 when antithrombin (AT) lowering capacity of fitusiran had achieved therapeutic target range to the earliest of (Day 246 or last day of bleeding follow up)(maximum duration of EP: from Day 29-Day 246). This endpoint presents estimated results (i.e., results received by applying negative binomial [NB] regression model on data collected during EP). Analysis performed on ITT population. Here, subjects analysed=subjects with available data.	
End point type	Primary
End point timeframe:	
From Day 29 up to Day 246 or up to the last day of bleeding follow up (any day up to Day 246), whichever was the earliest	

End point values	Factor On-demand	Fitusiran 80 mg Prophylaxis		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	40	79		
Units: episodes per subject per year				
number (confidence interval 95%)	30.991 (21.114 to 45.487)	3.133 (2.269 to 4.326)

upper limit	0.159

Notes:

[1] - P-value derived from NB regression model during EP, with treatment arm, number of bleeds in 6 months prior to study (≤ 10 , > 10) and haemophilia type (A vs B) as fixed effects. Significance threshold was at 0.05.

Primary: Observed Annualised Bleeding Rate (ABR) for Treated Bleeds During the Efficacy Period

End point title	Observed Annualised Bleeding Rate (ABR) for Treated Bleeds During the Efficacy Period ^[2]
-----------------	------------------------------------------------------------------------------------------------------

End point description:

ABR for subject during EP: annualised number of bleeding episodes during EP annualised to 1-year interval of time. $ABR = \text{number of bleeding episodes during EP} / \text{total number of days during EP} \times 365.25$. A bleeding episode was defined as any occurrence of hemorrhage that required administration of BPA or factor. It started from first sign of a bleed and ended no more than 72 hours after the last treatment for bleed, within which any symptoms of bleeding at the same location or injections ≤ 72 hours apart were considered same bleeding episode. EP was defined as time duration starting from Day 29 when AT lowering capacity of fitusiran had achieved therapeutic target range to the earliest of (Day 246 or last day of bleeding follow up)(maximum duration of EP: from Day 29-Day 246). This endpoint presents observed results (i.e., descriptive statistics values based on the data collected during EP). Analysis performed on ITT population. Here, subjects analysed=subjects with available data.

End point type	Primary
----------------	---------

End point timeframe:

Score at Month 9

End point title	Health-related Quality of Life (HRQOL): Change From Baseline in Haemophilia Quality of Life Questionnaire for Adults (Haem-A-QOL) Physical Health Score at Month 9
-----------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------

End point description:

Haem-A-QoL: subject-reported questionnaire designed for adult subjects (≥ 17 years of age) with haemophilia; and consisted of 46 items comprising 10 domains (physical health, feelings, view of yourself, sports and leisure, work and school, dealing with haemophilia, treatment, future, family planning, partnership and sexuality). Scoring for each item was based on a 5-point Likert scale (1= never, 2= rarely, 3= sometimes, 4= often, and 5=all the time), and higher scores represented greater impairment. Change from baseline in physical health domain score was reported in this endpoint. Raw score for physical health domain were transformed to a scale ranged from 0 (better health outcome) to 100 (worst health outcome), where lower scores denoted better physical health. Analysis performed on ITT population. Here, subjects analysed=subjects with available data.

End point description:

Haem-A-QoL: subject-reported questionnaire designed for adult subjects (≥ 17 years of age) with haemophilia; and consisted of 46 items comprising 10 domains (physical health, feelings, view of yourself, sports and leisure, work and school, dealing with haemophilia, treatment, future, family planning, partnership and sexuality). Scoring for each item was based on a 5-point Likert scale (1= never, 2= rarely, 3= sometimes, 4= often, and 5= all the time), and higher scores represent greater impairment. Raw score for each domain were transformed to a scale ranged between 0 and 100, where lower scores denoted better health. Haem-A-QoL Total Score was average of all domain scores and ranged from 0 (better health outcome) to 100 (worst health outcome), where lower scores denoted better physical health. Analysis performed on ITT population. Here, subjects analysed=subjects with available data.

End point type	Secondary
End point timeframe:	
Baseline (Day 1), Month 9	

End point values	Factor On-demand	Fitusiran 80 mg Prophylaxis		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	34	69		
Units: scores on a scale				
least squares mean (confidence interval 95%)	-2.62 (-6.27 to 1.03)	-9.68 (-12.51 to -6.86)		

Statistical analyses

Statistical analysis title	Factor On-demand vs Fitusiran 80 mg Prophylaxis
Comparison groups	Factor On-demand v Fitusiran 80 mg Prophylaxis
Number of subjects included in analysis	103
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.0011 ^[7]
Method	ANCOVA
Parameter estimate	LS Mean difference
Point estimate	-7.07
Confidence interval	
level	95 %
sides	2-sided
lower limit	-11.23
upper limit	-2.9

Notes:

[7] - ANCOVA model included treatment arm, number of bleeds in 6 months prior to study ($\leq 10, > 10$) and haemophilia type (A vs B) as fixed effects, Baseline score as covariate. Significance threshold was at 0.05.

Secondary: Estimated Annualised Bleeding Rate (ABR) for Treated Bleeds During the Onset Period

End point title	Estimated Annualised Bleeding Rate (ABR) for Treated Bleeds During the Onset Period
-----------------	-------------------------------------------------------------------------------------

End point description:

ABR was annualised number of bleeding episodes during onset period per subject annualised to 1-

year interval of time. A treated bleeding episode was defined as any occurrence of hemorrhage that required administration of BPA or factor. It started from the first sign of a bleed and ended no more than 72 hours after the last treatment for the bleed, within which any symptoms of bleeding at the same location or injections ≤ 72 hours apart were considered the same bleeding episode. The onset period was defined as time interval from Day 1 to the earlier of Day 28 or the last day of bleeding follow up. This endpoint presents estimated results (i.e., results received by applying NB regression model on data collected during onset period). Analysis performed on ITT population. Here, subjects analysed=subjects with available data.

End point type	Secondary
----------------	-----------

End point timeframe:

From Day 1 up to Day 28 or up to the last day of bleeding follow up (any day up to Day 28), whichever was the earliest

End point values	Factor On-demand	Fitusiran 80 mg Prophylaxis		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	40	79		
Units: episodes per subject per year				
number (confidence interval 95%)	33.389 (25.619 to 43.517)	10.805 (8.143 to 14.337)		

Statistical analyses

Secondary: Number of Subjects With Treatment Emergent Adverse Events (TEAEs) and Treatment-Emergent Serious Adverse Events (TESAEs)

End point title	Number of Subjects With Treatment Emergent Adverse Events (TEAEs) and Treatment-Emergent Serious Adverse Events (TESAEs)
-----------------	--------------------------------------------------------------------------------------------------------------------------

End point description:

An adverse event (AE) was defined as any untoward medical occurrence in a subject who received study drug which did not necessarily have a causal relationship with the treatment. Treatment-emergent AEs were defined as any AE with onset date after first dose of fitusiran in the fitusiran prophylaxis arm or after Day 1 visit in the factor on-demand arm. A serious AE (SAE) was defined as any untoward medical occurrence that at any dose: resulted in death, was life-threatening, required inpatient hospitalisation or prolongation of existing hospitalisation, resulted in persistent or significant disability or incapacity, was a congenital anomaly or birth defect, or was a medically important event. Analysis was performed on safety analysis set that included all subjects who received at least 1 dose of study drug or were randomised to on-demand arm, analysed according to the actual treatment received.

End point type	Secondary
----------------	-----------

End point timeframe:

From Baseline (Day 1) up to 15 months (i.e., 9 months treatment period + 6-month follow-up)

End point values	Factor On-demand	Fitusiran 80 mg Prophylaxis		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	40	79		
Units: subjects				
Any TEAE	18	62		
Any TESAE	5	5

Reporting groups

Reporting group title	Factor On-demand
-----------------------	------------------

Reporting group description:

Subjects received on-demand factor concentrates (as needed, for episodic bleeding episodes, and not on a regular regimen intended to prevent spontaneous bleeding) per Investigator discretion for the treatment of breakthrough bleeding episodes from Day 1 up to a total of 9 months.

Reporting group title	Fitusiran 80 mg Prophylaxis
-----------------------	-----------------------------

Reporting group description:

Subjects received open-label fitusiran 80 milligram (mg) administered subcutaneously (SC) as prophylaxis once monthly from Day 1 up to a total of 9 months. Subjects received on-demand factor concentrates (per investigator's discretion and within bleeding dosing guidelines) for the treatment of breakthrough bleeding episodes.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 November 2017	Following changes were made: To implement additional safety measures to mitigate the risk of thrombosis in the lowered-AT setting induced by fitusiran therapy in the context of concomitant use of factor for bleed management. This included updating the bleed management guidelines, outlining recommendations for the monitoring and management of thrombotic events, clarification on the definitions for bleeding episodes, revision of the recommendations for the management of sepsis, and inclusion of additional exploratory laboratory assessments.
27 June 2018	Following changes were made: Clinical development and commercialisation of fitusiran were granted from Alnylam Pharmaceuticals, Inc. to Genzyme Corporation, a Sanofi company, which assumed responsibility of the current clinical program. Therefore, the Alnylam logo and reference to Alnylam was changed to "the Sponsor" or "Sanofi Genzyme" as appropriate throughout the protocol. The Sanofi Genzyme study code (EFC14768) was added, and the Alnylam study drug code ALNAT3SC was also updated to the generic drug name fitusiran (SAR439774). Several sections were created or updated to reflect the Sanofi Genzyme environment.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
