

Clinical trial results:

An exploratory study to evaluate the efficacy and safety of bilastine in reducing pruritus in patients with chronic spontaneous urticaria and other skin diseases.

Summary

EudraCT number	2016-001505-17
Trial protocol	ES HU
Global end of trial date	30 March 2017

Results information

Result version number	v1 (current)
This version publication date	26 June 2022
First version publication date	26 June 2022

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 December 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	30 March 2017
Global end of trial reached?	Yes
Global end of trial date	30 March 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The study objective will be to evaluate the efficacy of bilastine in the relief of pruritus in patients with chronic spontaneous urticaria or pruritus associated with other skin diseases.

Protection of trial subjects:

Close medical monitoring and immediate access to medical care in case of any adverse event during and after the trial, until 4 weeks after the last medication intake.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 August 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 88
Country: Number of subjects enrolled	Spain: 2
Country: Number of subjects enrolled	Hungary: 25
Worldwide total number of subjects	115
EEA total number of subjects	115

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	108
From 65 to 84 years	7

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

Recruitment was performed from August 2016 to March 2017 in 10 Clinical sites in Spain (2), Poland (3) and Hungary (5): 123 patients were screened and 115 patients were enrolled with diagnosis of chronic spontaneous urticaria (34), eczema/dermatitis (30), prurigo (25) and cutaneous pruritus (26).

Pre-assignment

Screening details:

Male and female patients between 18 and 74 years diagnosed of CSU, eczema/dermatitis, prurito or cutaneous pruritus. CSU diagnosed at least 6 weeks prior to consent, with at least 4 points (UAS Itch score sum, the last 3 days of run-in period) and 16 points (UAS7, the last 7 days before enrollment)

Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Chronic spontaneous urticaria

Arm description:

Patients with pruritus due to chronic spontaneous urticaria

Arm type	Experimental
Investigational medicinal product name	Bilastine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

20 mg once daily

Arm title	Eczema/Dermatitis
------------------	-------------------

Arm description:

Patients with pruritus due to dermatitis/eczema

Arm type	Experimental
Investigational medicinal product name	Bilastine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

20 mg once daily

Arm title	Prurigo

Subject analysis sets

Subject analysis set title	Safety Analysis set
Subject analysis set type	Safety analysis

Subject analysis set description:

of the 115 included patients, 34 (29.57%) patients had a diagnosis of CSU, and 81 (70.43%) had a diagnosis of eczema/dermatitis, prurigo or cutaneous pruritus group.

In the eczema/dermatitis group, which consisted of 30 patients, the following characteristics were described:

- 19 patients were diagnosed of atopic dermatitis
- 4 patients were diagnosed of chronic eczema
- 7 patients were diagnosed of contact dermatitis

In the prurigo group, which consisted of 25 patients, the following characteristics were described:

- 24 patients were diagnosed of chronic prurigo
- 1 patient was diagnosed of subacute prurigo.

Finally, in the cutaneous pruritus group, which consisted of 26 patients, the following characteristics were described:

- 24 patients were diagnosed of systemic cutaneous pruritus
- 2 patients were diagnosed of local cutaneous pruritus

Subject analysis set title	Full Analysis set
Subject analysis set type	Full analysis

Subject analysis set description:

the full analysis set (FAS) population consisted of 111 patients (96.5% of the included sample). All efficacy variables were based on the FAS population.

The FAS was defined as all patients who had taken at least one dose of study treatment and who had available a postbaseline evaluation of the primary efficacy endpoint at baseline (D0) and at week 8 (Visit 5).

Primary: Efficacy of bilastine in the relief of pruritus

End point title	Efficacy of bilastine in the relief of pruritus
End point description:	
Efficacy of bilastine in the relief of pruritus in patients with CSU or pruritus associated with other skin diseases.	
The primary endpoint was the mean change in weekly pruritus severity score (mean "week 8" score – mean baseline score) and was analysed with a paired Student's t-test with 2-sided alpha=0.05, including its corresponding 95% confidence interval (CI). A non-parametric approach as the Wilcoxon test for paired data was used in case the assumptions for a parametric approach were not met

Statistical analyses

Statistical analysis title	SAS® Version 9.2 or later.
Statistical analysis description:	
All descriptive variables were tabulated. Quantitative variables were described showing their number of available and missing observations, mean, median, standard deviation (SD), the range (minimum and maximum) and the first and third quartiles. Frequency and percentage described qualitative variables. Missing values were tabulated with their frequency but were not included in the calculation of percentages

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: The number of exposed patients for our understanding refers to the total number of patient per reporting group.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 March 2017	After the closure of the database and the delivery of the first results, it was decided the convenience of perform an ad-hoc analysis for the efficacy variables in which change from baseline were reported in order to split the results of those patients who achieve a 30% improvement at Week 2 (responder patients) from those who updosed 2 x 20 mg tablets of bilastine from Week 2 to Week 8 (non-responder patients).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
