

Clinical trial results:

Clinical evaluation of switching to Lithiofor® (Lithium Sulphate Slow – Release, Li-SR tablets) from Carbolithium® (Lithium Carbonate Immediate-Release, Li-IR, capsules) in Bipolar patients, poorly tolerant to lithium immediate-release treatment

Summary

EudraCT number	2016-001714-14
Trial protocol	IT

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 September 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	20 September 2019
Global end of trial reached?	Yes
Global end of trial date	20 September 2019
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study is the evaluation of the change in the lithium-induced tremor when switching from lithium IR formulation (Carbolithium®) to a new lithium Slow-Release (SR)/Prolonged Release (PR) formulation (Lithiofor®), after 1 week.

Protection of trial subjects:

The present study has been conducted in accordance with the study protocol, GCPs, Declaration of Helsinki (including up-to-date versions) and the applicable regulatory requirements. Patients had written informed consent, after having been informed about benefits and potential risks of the clinical trial, as well as details of the insurance taken out to cover the subjects participating in the trial. No other specific measures were provided. In case of ineffective treatment the Investigator administered alternative drugs and the patients discontinued study.

Background therapy:

Not applicable

Evidence for comparator:

Lithium has been a cornerstone of therapy for bipolar disorder for several decades and is effective in the management of both manic and depressive episodes. The effectiveness of lithium monotherapy in acute mania has been demonstrated in randomised active- and placebo-controlled trials and for this reason it is a first-line recommendation in the majority of the current clinical practice guidelines. Moreover, lithium salts have demonstrated efficacy in the prevention of mania, depression and suicidal behaviour and remain among the most commonly prescribed prophylactic medications for the maintenance phase of Bipolar Depression.

Actual start date of recruitment	01 December 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Italy: 85
Worldwide total number of subjects	85
EEA total number of subjects	85

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37	0

wk	
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	84
From 65 to 84 years	1
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Recruitment of 138 patients was planned. 85 were screened and 73 patients were randomised to allocated intervention (37 in Lithium PR and 36 in Lithium IR) from 28 March 2017 (FPFV) to 20 September 2019 (LPLV).

Pre-assignment

Screening details:

85 patients were screened and evaluated for relevant medical and psychiatric history, current medical conditions, age, sex, race, weight and height, clinical chemistry, hematology and urinalysis screens, screening of substance abuse and a pregnancy test in female subjects. 12 patients resulted screening failure. 73 patients were randomised.

Pre-assignment period milestones

Number of subjects started	85
Number of subjects completed	70

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Discontinued medication: 3
Reason: Number of subjects	Consent withdrawn by subject: 4
Reason: Number of subjects	Screening failure: 8

Period 1

Period 1 title	PERIOD 1 (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

This was an open-label study. A blinded assessor performed the primary and secondary outcome evaluations, except for other safety evaluations, in order to limit bias due to the open-label conditions.

Arms

Are arms mutually exclusive?	Yes
Arm title	Test: Lithium PR

Arm description:

Lithium Sulphate Prolonged-Release 660 mg tablet (Lithiofor®) – Lithium PR

Arm type	Experimental
Investigational medicinal product name	Lithium Sulphate Prolonged-Release 660 mg tablet
Investigational medicinal product code	136
Other name	Lithiofor®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients had to take orally one tablet once or twice daily (one tablet in the morning and one tablet in the evening) or two tablets in a single dose (two tablets in the evening).

Arm title	Reference: Lithium IR
------------------	-----------------------

Arm description:

Lithium Carbonate Immediate-Release 150 mg and 300 mg capsules (Carbolithium®) – Lithium IR

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Lithium Carbonate Immediate-Release 150 mg and 300 mg
Investigational medicinal product code	136
Other name	Carbolithium®
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Patients had to take orally 300-1800 mg daily divided into 2-6 doses daily.

Number of subjects in period 1^[1]	Test: Lithium PR	Reference: Lithium IR
Started	35	35
Completed	27	32
Not completed	8	3
Adverse event, serious fatal	1	-
Consent withdrawn by subject	1	-
Adverse event, non-fatal	4	-
Protocol deviation	2	3

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 85 patients were screened and evaluated. 73 patients were randomised.

Subject analysis sets

Subject analysis set title	Safety population
Subject analysis set type	Safety analysis
Subject analysis set description:	
The Safety population included all randomized subjects who took at least one dose of the study treatments and consisted of 72 patients (1 patient did not take any study medication).	
Subject analysis set title	m-ITT population
Subject analysis set type	Modified intention-to-treat
Subject analysis set description:	
The modified ITT population consisted of all randomized patients who took at least one dose of study	

medication and had an evaluation of the primary endpoint (tremor) both at baseline and at 1 week of treatment. Following the Data Review Meeting, three patients (4003, 2009 and 7001) were excluded from the m-ITT that therefore it consisted of 70 patients.

Subject analysis set title	PP population
Subject analysis set type	Per protocol

Subject analysis set description:

The PP population consisted of all patients in m-ITT with no major protocol deviations and a treatment compliance $\geq 80\%$ from baseline to 1-week treatment period. Following the Data Review Meeting, 20 additional patients were excluded from the PP population leaving 50 PP patients.

Primary: Proportion of patients with Improvement in tremor at 1 week

End point title	Proportion of patients with Improvement in tremor at 1 week ^[1]
End point description: The primary endpoint was the evaluation of the proportion of patients with an improvement in tremor assessed by a single item (2.5 tremor, see section 9.5.1.1) of the UKU side-effect rating scale after 1-week treatment period compared to baseline. Improvement was defined as a difference ≥ 1 between scoring system at baseline and scoring system after 1 week of treatment. m-ITT. Statistical Analysis Fisher's exact test p-value (two-tail)	
End point type	Primary
End point timeframe: After 1 week of treatment vs baseline.	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The primary endpoint was analyzed using a two tailed Fisher's exact test with an alpha level of 0.05.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

The timeframe for reporting adverse events is from informed Consent signature up to the last visit scheduled in the study (12 weeks after Visit 1)

Adverse event reporting additional description:

The adverse events seen in the study were as expected for this population and this class of drugs. They were mostly mild and transient, did not seem to be dose-related and gave no indication of target organ toxicity or unexpected findings.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 August 2017	Amendment no. 1 of 15-May 2017, (protocol version 3.0 dated 15/05/2017) was issued after the completion of the Italian commercialization procedure, in order to include the reference to the prolonged-release formulation marketed by Angelini S.p.A., with the commercial brand name Resilient™.
20 February 2018	Amendment no. 2 of 6 February 2018 issued to include two additional sites (Azienda Sanitaria dell'Alto Adige Servizio Psichiatrico del Comprensorio Sanitario di Bolzano and Ospedale San Giovanni di Dio di Orbetello Unità Funzionale Salute Mentale). Azienda Sanitaria dell'Alto Adige Servizio Psichiatrico del Comprensorio Sanitario di Bolzano later asked to be excluded from participation and did not randomize any patient.
17 August 2018	Amendment no. 4 of 19 April 2018 (protocol version 4.0 dated 19.04.2018), to introduce: <ul style="list-style-type: none">• Changes in the Sponsor's personnel, due to internal reorganization,• Updated safety information and updated SPC of Carbolithium®,• Modification of the informed consent form following the entry into force of the Regulation 2016/679 EU (GDPR).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to the objective difficulties in patient recruitment (after the availability of Lithium PR -Resilient™ on the Italian market), the Sponsor decided to terminate the study early in June 2019, including 85 patients out of 138 expected.
