

Clinical trial results:

Phase II single-arm “window-of-opportunity” study of a combination of obinutuzumab (GA-101) and venetoclax (ABT-199) in relapsed or refractory diffuse large B-cell lymphoma (DLBCL)

Summary

EudraCT number	2016-001760-10
Trial protocol	AT
Global end of trial date	19 October 2021

Results information

Result version number	v1 (current)
This version publication date	19 October 2022
First version publication date	19 October 2022

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 October 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	19 October 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Objective response rate (complete or partial responses; best response) defined by PET/CT scan and bone marrow examination (Lugano Criteria 2014) after 3 cycles.

Protection of trial subjects:

Safety measurements were assessed at screening, every 3 weeks during and at the end of treatment, and at final visit. All (serious) adverse events occurring during study treatment were collected from signing the informed consent form until 28 days after last study treatment.

Recommendations for administration of first and subsequent infusions of Obinutuzumab including premedication and supportive care were given. Guidelines and recommendations for dosage delays and modifications were defined. In general, concomitant medications and therapies necessary for supportive care and safety of the patient were allowed. Antiviral prophylaxis and PJP prophylaxis were recommended at the physician's discretion. Monitoring and treatment for Hepatitis B reactivation was discussed in the protocol.

Background therapy:

None

Evidence for comparator:

Not applicable

Actual start date of recruitment	04 January 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Austria: 22
Worldwide total number of subjects	22
EEA total number of subjects	22

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	12
From 65 to 84 years	10
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Between 04-Jan-2017 and 10-Jun-2020 22 patients were enrolled at five sites in Austria.

Pre-assignment

Screening details:

One patient received study treatment but was withdrawn from study during the first treatment cycle because inclusion criterion "diagnosis" was not met according to the result of the reference pathology. This patient was replaced and was not included in primary endpoint analysis.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Overall study
-----------	---------------

Arm description:

Combination treatment is repeated for up to 3 cycles. The first response assessment (including PET-CT) is performed after the first cycle of obinutuzumab-venetoclax and patients with at least stable disease (SD) or better are given another 2 cycles of therapy and have assessment after a total of 3 cycles. Patients with complete or partial remission (CR, PR) after 3 cycles of therapy go on to transplant or receive 9 further cycles of the combination therapy (if transplant ineligible). Patients with progressive disease at any time-point or stable disease after 3 cycles are taken off study.

Arm type	Experimental
Investigational medicinal product name	Obinutuzumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Infusion

Dosage and administration details:

Given IV at a dose of 1000 mg on days 1, 8, 15 in cycle 1 and on day 1 of each following cycle. One cycle is 21 days.

Investigational medicinal product name	Venetoclax
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Given (prior to Obinutuzumab) at a dose of 800 mg daily p.o. starting from d1, cycle 1. One cycle is 21 days.

Number of subjects in period 1	Overall study
Started	22
Response assessment after cycle 3	12
Transplant or start of further 9 cycles	5

Completed	3
Not completed	19
Not eligible according to reference pathology	1
Stable disease after cylce 3	1
Progressive disease	16
Patient lost	1

Primary: Response rate

End point title	Response rate ^[1]
End point description:	
Objective response rate (complete or partial responses) defined by PET/CT scan and bone marrow examination (Lugano Criteria 2014) after 3 cycles	
End point type	Primary
End point timeframe:	
After 3 cycles of combination therapy	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis is provided as this is an one armed, open label, non-comperative study.

Overall response rate after 3 cycles of therapy is 5/21 (23.8%).

End point values	Overall study			
Subject group type	Reporting group			
Number of subjects analysed	21 ^[2]			
Units: Subjects				
Complete response	4			
Partial remission	1			
Stable disease	1			
Progressive disease	6			
NA	9			

Notes:

[2] - One patient was excluded because inclusion criterion DLBCL was not met acc. to reference pathology.

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From inclusion of patient until final visit (28 days after completion or discontinuation of study treatment).

Adverse event reporting additional description:

Abnormal laboratory value was not assessed as AE unless that value led to discontinuation or delay in treatment, dose modification, therapeutic intervention. Progression of disease was not to be regarded as SAE. Relation to IMPs obinutuzumab and/or venetoclax is given. Deaths during FU are not part of this analysis.

Assessment type	Systematic
