Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 May 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	19 November 2018
Global end of trial reached?	Yes
Global end of trial date	17 December 2018
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To compare the efficacy of tofacitinib MR 11mg monotherapy to tofacitinib MR 11mg with continued MTX, as measured by the change in the Disease Activity Score utilizing 4 components including erythrocyte sedimentation rate (DAS28-4 [ESR]) from randomization (at Week 24) to the end of the double-blind MTX withdrawal phase (at Week 48).

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonisation (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 September 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Mexico: 25
Country: Number of subjects enrolled	Australia: 7
Country: Number of subjects enrolled	Belgium: 2
Country: Number of subjects enrolled	Bulgaria: 49
Country: Number of subjects enrolled	Czech Republic: 60
Country: Number of subjects enrolled	Germany: 1
Country: Number of subjects enrolled	Hungary: 30
Country: Number of subjects enrolled	Korea, Democratic People's Republic of: 17
Country: Number of subjects enrolled	Philippines: 12
Country: Number of subjects enrolled	Poland: 130
Country: Number of subjects enrolled	Russian Federation: 37
Country: Number of subjects enrolled	Slovakia: 22
Country: Number of subjects enrolled	South Africa: 2
Country: Number of subjects enrolled	Spain: 15
Country: Number of subjects enrolled	United Kingdom: 9
Country: Number of subjects enrolled	United States: 276
Worldwide total number of subjects	694
EEA total number of subjects	318

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	508
From 65 to 84 years	184
85 years and over	2

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 136 sites in the 16 countries from 01 September 2016 to 17 December 2018.

Pre-assignment

Screening details:

A total of 873 subjects were screened in the open label phase. 694 subjects were treated.

Period 1

Period 1 title	Open Label Phase (24 Weeks)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Open Label: Tofacitinib 11 mg + Methotrexate
------------------	--

Arm description:

Subjects with moderate to severe rheumatoid arthritis (RA) and who were insufficiently responding to their stable dose of methotrexate treatment previous to enrollment in this study, received Tofacitinib modified release (MR) 11 milligram (mg) tablet once daily (QD) with methotrexate (as background therapy) at their previous stable dose for 24 weeks in open label phase (OL).

Arm type	Experimental
Investigational medicinal product name	Tofacitinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received Tofacitinib MR 11 mg tablet QD for 24 weeks in open label phase.

Investigational medicinal product name	Methotrexate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received methotrexate at their previous stable dose for 24 weeks in open label phase.

Number of subjects in period 1	Open Label: Tofacitinib 11 mg + Methotrexate
Started	694
Completed	623
Not completed	71
Consent withdrawn by subject	6
Adverse event, non-fatal	39
Insufficient Clinical Response	7

Medication error,no linked adverse event	2
Unspecified	4
Lost to follow-up	8
Protocol deviation	5

Period 2

Period 2 title	Double Blind Phase (24 Weeks)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject

Arms

Are arms mutually exclusive?	No
Arm title	Double Blind: Tofacitinib 11 mg + Methotrexate Placebo

Arm description:

Subjects with low disease activity (LDA) at the end of open label phase were randomized to receive Tofacitinib MR 11 mg tablet once daily with matching placebo to blinded methotrexate at their previously stabilized dose for 24 weeks in double blind phase.

Arm type	Experimental
Investigational medicinal product name	Tofacitinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received Tofacitinib MR 11 mg tablet QD for 24 weeks in double blind phase.

Investigational medicinal product name	Methotrexate Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received methotrexate matching placebo at their previous stable dose for 24 weeks in double blind phase.

Arm title	Double Blind: Tofacitinib 11 mg + Methotrexate
------------------	--

Arm description:

Subjects with LDA at the end of open label phase received Tofacitinib MR 11 mg tablet once daily with blinded methotrexate at their previously stabilized dose for 24 weeks in double blind phase.

Arm type	Experimental
Investigational medicinal product name	Tofacitinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received Tofacitinib MR 11 mg tablet QD for 24 weeks in double blind phase.

Investigational medicinal product name	Methotrexate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received methotrexate at their previous stable dose for 24 weeks in double blind phase.

Number of subjects in period 2	Double Blind: Tofacitinib 11 mg + Methotrexate Placebo	Double Blind: Tofacitinib 11 mg + Methotrexate
Started	267	266
Treated	264	266
Completed	238	247
Not completed	29	19
Adverse event, serious fatal	-	2
Consent withdrawn by subject	5	2
Screen Failure	1	-
Adverse event, non-fatal	6	6
Insufficient Clinical Response	6	1
Randomized but not Treated	3	-
Unspecified	2	5
Lost to follow-up	1	1
Protocol deviation	5	2

Baseline characteristics

Reporting groups

Reporting group title	Open Label: Tofacitinib 11 mg + Methotrexate
-----------------------	--

Primary: Double Blind Phase: Change From Randomization in Disease Activity Score in 28 Joints Using 4 Variables (DAS28-4) (Erythrocyte Sedimentation Rate [ESR]) at Week 48

End point title	Double Blind Phase: Change From Randomization in Disease Activity Score in 28 Joints Using 4 Variables (DAS28-4) (Erythrocyte Sedimentation Rate [ESR]) at Week 48
End point description: DAS28 is a measure of disease activity in subjects with RA. DAS28-4 (ESR) was calculated from swollen joint count(SJC) and tender/painful joint count (TJC) using 28 joints count, ESR (millimeters per hour [mm/hr]) & subject global assessment of arthritis (PtGA) on a 100 millimeter (mm) visual analog scale (VAS: scores ranging from 0 mm [very well] to 100 mm [worst], higher scores indicate worse health condition). Total DAS28-4 (ESR) score range: 0(none) to 9.4 (extreme disease activity), higher score indicated more disease activity. DAS28-4 (ESR) less than or equal to (\leq) 3.2 implied low disease activity and greater than ($>$) 3.2 to \leq 5.1 implied moderate disease activity, $>$ 5.1 implied high disease activity & DAS28-4 (ESR) less than ($<$) 2.6 implied remission. DAS28-4 (ESR) = $0.56 \times \sqrt{\text{TJC28}} + 0.28 \times \sqrt{\text{SJC28}} + 0.70 \times \ln(\text{ESR in mm/ hour}) + 0.014 \times \text{PtGA in mm}$; \ln =natural logarithm, $\sqrt{\text{ }}$ =square root of. FAS-DB. Overall number of subjects analyzed=subjects evaluable for this endpoint.	
End point type	Primary
End point timeframe: Randomization (last non-missing measurement on or prior to the first dosing date in DB phase at Week 24), Week 48	

End point values	Double Blind: Tofacitinib 11 mg + Methotrexate Placebo	Double Blind: Tofacitinib 11 mg + Methotrexate		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	235	237		
Units: units on a scale				
least squares mean (standard error)	0.33 (\pm 0.07)	0.03 (\pm 0.07)		

Statistical analyses

Statistical analysis title	Tofacitinib + MTX Placebo Vs Tofacitinib + MTX
Statistical analysis description:	
Linear mixed-effect model of repeated measures (MMRM) was used that included the fixed effects of treatment, visit, treatment-by-visit interaction, prior use of a biological disease-modifying anti-rheumatic drug (DMARD), and baseline DAS28-4 (ESR) value as a covariate.	
Comparison groups	Double Blind: Tofacitinib 11 mg + Methotrexate Placebo v Double Blind: Tofacitinib 11 mg + Methotrexate
Number of subjects included in analysis	472
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[1]
P-value	= 0.0005 ^[2]
Method	MMRM
Parameter estimate	Least Square (LS) Mean Difference
Point estimate	0.3
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.12
upper limit	0.48
Variability estimate	Standard error of the mean
Dispersion value	0.09

Notes:

[1] - Non-inferiority of Tofacitinib monotherapy to Tofacitinib with continued MTX treatment was concluded if the upper bound of 95% 2-sided CI for difference between the 2 arms (Tofacitinib monotherapy arm - Tofacitinib with MTX arm) was lower than 0.6.

[2] - The reported p-value (one-sided) is for the non-inferiority test at the margin of 0.6

Secondary: Double Blind Phase: Change From Randomization in DAS28-4 ESR at Week 36

End point title	Double Blind Phase: Change From Randomization in DAS28-4 ESR at Week 36

End point description:

DAS28 is a measure of disease activity in subjects with rheumatoid arthritis. DAS28-4 (ESR) was calculated from SJC and TJC using 28 joints count, ESR (mm/hr) and PtGA on a 100 mm VAS (VAS: scores ranging from 0 mm [very well] to 100 mm [worst], higher scores indicated worse health condition). Total DAS28-4 (ESR) score range: 0 (none) to 9.4 (extreme disease activity), higher score indicated more disease activity. DAS28-4 (ESR) ≤ 3.2 implied low disease activity and >3.2 to ≤ 5.1 implied moderate disease activity, >5.1 implied high disease activity, and DAS28-4 (ESR) <2.6 implied remission. DAS28-4 (ESR) = $0.56 \cdot \sqrt{\text{TJC28}} + 0.28 \cdot \sqrt{\text{SJC28}} + 0.70 \cdot \ln(\text{ESR in mm/ hour}) + 0.014 \cdot \text{PtGA in mm}$. Non-responder imputation (NRI) method was used to impute missing data. FAS-DB included all subjects who received at least 1 dose of investigational drug during the OL phase, were randomized and received at least 1 dose of the randomized investigational drug regimen during DB phase.

End point title	Double Blind Phase: Change From Randomization in Health Assessment Questionnaire-Disability Index (HAQ-DI) at Week 36 and 48
-----------------	--

End point description:

HAQ-DI assesses the degree of difficulty a subject has experienced during the past week in 8 domains of daily living activities: dressing/grooming; arising; eating; walking; reach; grip; hygiene; and other activities.. There were total of 30 items distributed in these 8 domains. Each item was scored on a 4-point scale from 0 to 3: 0= no difficulty; 1= some difficulty; 2= much difficulty; 3= unable to do. Overall score was computed as the sum of domain scores and divided by the number of domains answered. Total possible score range 0 (least difficulty) and 3 (extreme difficulty), where higher scores indicate more difficulty while performing daily living activities. FAS-DB was analyzed. Here, 'n' = Subjects evaluable for this endpoint at specified time points.

End point title	Double Blind Phase: Change From Randomization in the Short Form 36 (SF-36) Health Survey 8 Domain Scores at Week 36 and 48
-----------------	--

End point description:

SF-36 is a subject reported standardized survey designed to assess generic health related quality of life. It consisted of 36 items evaluating 8 aspects of functional health and well-being: physical functioning, role physical, bodily pain, social functioning, mental health, role emotional, vitality, and general health perception. The score range for each of the 8 health aspects was from 0 (poor health) to 100 (better health), higher scores indicating good health condition. Scores of 8 health aspects were summarized to derive the 2 component scores (physical component scores [PCS], mental component scores [MCS]) ranging from 0 (worst) to 100 (best), where higher PCS/MCS indicated good health condition. FAS-DB was analyzed. Here, 'n' = Subjects evaluable for this endpoint at specified time points.

Secondary: Double Blind Phase: Change From Randomization in the Work Productivity and Activity Impairment (WPAI) Scores at Week 36 and 48

End point title	Double Blind Phase: Change From Randomization in the Work Productivity and Activity Impairment (WPAI) Scores at Week 36 and 48
-----------------	--

End point description:

WPAI is 6-question subject rated questionnaire to determine the impact of rheumatoid arthritis and yields 4 types of outcomes: absenteeism (work time missed), presenteeism (impairment while working), work productivity loss (overall work impairment), and daily activity (DA) impairment (activity impairment) for a period of 7 days prior to a visit. These 4 outcomes are expressed as an impairment percentage (range from 0 to 100), with higher numbers indicating greater impairment and less productivity. FAS-DB was analyzed. Here, 'n' = Subjects evaluable for this endpoint at specified time points.

End point type	Secondary

Secondary: Double Blind Phase: Change From Randomization in the European Quality of Life - 5 Dimensions Questionnaire (EQ-5D) Scores at Week 36 and 48

End point title	Double Blind Phase: Change From Randomization in the European Quality of Life - 5 Dimensions Questionnaire (EQ-5D) Scores at Week 36 and 48
-----------------	---

End point description:

EQ-5D was a subject completed instrument designed to assess impact on quality of life in terms of a single utility score in 5 domains: mobility, self-care, usual activities, pain and discomfort, and anxiety and depression. 3 possible answers for mobility: 1=no problem in walking, 2=moderate problems in walking, 3= confined to bed; self-care: 1=no problem, 2=moderate problems, 3= unable to wash/dress; usual activities: 1=no problem, 2=moderate problems, 3= unable to do usual activities; pain and discomfort: 1=no pain or discomfort, 2=moderate pain or discomfort, 3= extreme pain or discomfort; anxiety and depression: 1=not anxious or depressed, 2=moderately anxious or depressed, 3= extremely anxious or depressed. The 5-dimensional systems are converted into a single index utility score between 0 and 1, where higher score indicated a better health state. FAS-DB population was analyzed. Here, 'n' = Subjects evaluable for this endpoint at specified time points.

End point title	Double Blind Phase: Percentage of Subjects Achieving an Improvement of at Least 0.22 Units in HAQ-DI at Weeks 36 and 48
-----------------	---

End point description:

HAQ-DI assesses the degree of difficulty a subject has experienced during the past week in 8 domains of daily living activities: dressing/grooming; arising; eating; walking; reach; grip; hygiene; and other activities.. There were total of 30 items distributed in these 8 domains. Each item was scored on a 4-point scale from 0 to 3: 0= no difficulty; 1= some difficulty; 2= much difficulty; 3= unable to do. Overall score was computed as the sum of domain scores and divided by the number of domains answered. Total possible score range 0 (least difficulty) and 3 (extreme difficulty), where higher scores indicate more difficulty while performing daily living activities. Percentage of subjects with an improvement of at least 0.22 units in HAQ scores from baseline (Day 1) to Week 36 and 48 were

reported in this endpoint. NRI method was used to impute missing data. FAS-DB population was analyzed.
