Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000055-PIP01-07
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 June 2004
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	08 June 2004
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To characterize the PK profile of single and repeated doses of rabeprazole sodium in participants 12 to 16 years of age with a diagnosis of, or symptoms of, gastroesophageal reflux disease (GERD).

Protection of trial subjects:

This study was conducted in accordance with standard operating procedures (SOPs) of the sponsor (or designee), which are designed to ensure adherence to Good Clinical Practice (GCP) guidelines as required by the following:

- Principles of the World Medical Association Declaration of Helsinki (World Medical Association, 2008)
- International Council on Harmonisation (ICH) E6 Guideline for GCP (CPMP/ICH/135/95) of the European Agency for the Evaluation of Medicinal Products, Committee for Proprietary Medicinal Products, International Council for Harmonisation of Technical Requirements for Registration of Pharmaceuticals for Human Use
- Title 21 of the United States (US) Code of Federal Regulations (US 21 CFR) regarding clinical studies, including Part 50 and Part 56 concerning informed subject consent and Institutional Review Board (IRB) regulations and applicable sections of US 21 CFR Part 312
- European Good Clinical Practice Directive 2005/28/EC and Clinical Trial Directive 2001/20/EC for studies conducted within any European Union (EU) country. All suspected unexpected serious adverse reactions were reported, as required, to the Competent Authorities of all involved EU member states.
- Article 14, Paragraph 3, and Article 80-2 of the Pharmaceutical Affairs Law (Law No. 145, 1960) for studies conducted in Japan, in addition to Japan's GCP Subject Information and Informed Consent.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	04 September 2003
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	24
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Twenty-four children 12 to 16 years of age who had a diagnosis of, or symptoms of, GERD were enrolled into the study. Twelve participants were randomized to the rabeprazole 10-mg group and 12 participants were randomized to the rabeprazole 20-mg group. All 24 participants completed the study; no early terminations or deaths were observed.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	10 mg Rabeprazole sodium

Arm description:

On Day 1, after an overnight fast and after completion of pre-dose evaluations (physical examinations, vital signs, electrocardiogram, and clinical laboratory testing), rabeprazole sodium was administered orally with water in the morning. Participants were allowed clear liquids 2 hours after study drug and lunch 4 hours after study drug. Subsequent study drug was administered in the morning on Days 2 to 4, and on Day 5 following an overnight fast. Alternatively, participants could continue taking a single daily dose of rabeprazole on Day 6, fast overnight and return to the site on Day 7 instead of Day 5 for the final dose of study drug and the second pharmacokinetic (PK) blood draw and laboratory testing. Participants returned to the site in a fasted state the morning of Day 6 (or Day 8) for the 24-hour post-dose PK blood draw and laboratory testing. Participants were discharged from the study after the final safety evaluation and study termination procedures were performed.

Arm type	Experimental
Investigational medicinal product name	Rabeprazole sodium
Investigational medicinal product code	E3810
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Rabeprazole sodium was administered to the participants in an ascending dose fashion, beginning with 10 mg. Administration of the 10 mg dose was completed and preliminary safety data was evaluated before administration of the 20 mg dose was initiated. Each participant participated for a total of up to 3 weeks, including the screening visit, which was scheduled within 2 weeks of study drug administration.

Arm title	20 mg Rabeprazole sodium

Primary: Mean Area Under the Plasma Concentration-Time Curve from zero to Time t (AUC (0-t))

End point title	Mean Area Under the Plasma Concentration-Time Curve from zero to Time t (AUC (0-t)) ^[1]
-----------------	--

End point description:

Blood samples were obtained pre-dose and post-dose, at specified time points. Rabeprazole plasma concentration and its metabolite, rabeprazole thioether (PTBI), was measured by a validated liquid chromatography/tandem mass spectrometry system (LC/MS/MS). The pharmacokinetic (PK) parameter, AUC was calculated by the linear/log trapezoidal rule and analyzed using non-compartmental methods.

Secondary: Summary of Adverse Events (AEs) and Serious Adverse Events (SAEs)

End point title	Summary of Adverse Events (AEs) and Serious Adverse Events (SAEs)
-----------------	---

End point description:

Safety variables assessed included: occurrence of AEs, SAEs, and Treatment-Emergent Signs and Symptoms (TESS), and changes in physical examination findings, clinical laboratory test results, vital signs, and electrocardiogram (ECG) evaluations. AEs were tabulated as TESS for this study. The incidence of TESS were summarized by body system, and by severity and relationship to study drug. A participant having the same TESS more than once over the course of the study was counted only once in the incidence calculation for that TESS. Also, if a participant had more than one TESS in a single body system, the participants was counted only once in the total number of participants with TESS for that body system. If a participant had a TESS more than once in the study, the occurrence with the maximum severity was used in the calculation of the incidence of individual TESS by severity. For drug relationship, the TESS considered most closely related to study drug was used.

End point type	Secondary

Reporting groups

Reporting group title	20 mg Rabeprazole sodium
-----------------------	--------------------------

Reporting group description:

On Day 1, after an overnight fast and after completion of pre-dose evaluations (physical examinations, vital signs, electrocardiogram, and clinical laboratory testing), rabeprazole sodium was administered orally with water in the morning. Participants were allowed clear liquids 2 hours after study drug and lunch 4 hours after study drug. Subsequent study drug was administered in the morning on Days 2 to 4, and on Day 5 following an overnight fast. Alternatively, participants could continue taking a single daily dose of rabeprazole on Day 6, fast overnight and return to the site on Day 7 instead of Day 5 for the final dose of study drug and the second pharmacokinetic (PK) blood draw and laboratory testing. Participants returned to the site in a fasted state the morning of Day 6 (or Day 8) for the 24-hour post-dose PK blood draw and laboratory testing. Participants were discharged from the study after the final safety evaluation and study termination procedures were performed.

Alternatively, participants could continue taking a single daily dose of rabeprazole on Day 6, fast overnight and return to the site on Day 7 instead of Day 5 for the final dose of study drug and the second pharmacokinetic (PK) blood draw and laboratory testing. Participants returned to the site in a fasted state the morning of Day 6 (or Day 8) for the 24-hour post-dose PK blood draw and laboratory testing. Participants were discharged from the study after the final safety evaluation and study termination procedures were performed.

Serious adverse events	20 mg Rabeprazole sodium	10 mg Rabeprazole sodium	
Total subjects affected by serious adverse events			
subjects affected / exposed	0 / 12 (0.00%)	0 / 12 (0.00%)	
number of deaths (all causes)	0	0	
number of deaths resulting from adverse events			

Frequency threshold for reporting non-serious adverse events: 0 %

Non-serious adverse events	20 mg Rabeprazole sodium	10 mg Rabeprazole sodium	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	4 / 12 (33.33%)	6 / 12 (50.00%)	
Nervous system disorders			
Headache			
subjects affected / exposed	1 / 12 (8.33%)	3 / 12 (25.00%)	
occurrences (all)	1	3	
General disorders and administration site conditions			
Fatigue			
subjects affected / exposed	0 / 12 (0.00%)	1 / 12 (8.33%)	
occurrences (all)	0	1	
Gastrointestinal disorders			
Diarrhoea			
subjects affected / exposed	1 / 12 (8.33%)	0 / 12 (0.00%)	
occurrences (all)	1	0	
Nausea			
subjects affected / exposed	1 / 12 (8.33%)	1 / 12 (8.33%)	
occurrences (all)	1	1	
Reproductive system and breast disorders			
Dysmenorrhoea			
subjects affected / exposed	1 / 12 (8.33%)	0 / 12 (0.00%)	
occurrences (all)	1	0	
Respiratory, thoracic and mediastinal disorders			
Asthma			
subjects affected / exposed	0 / 12 (0.00%)	1 / 12 (8.33%)	
occurrences (all)	0	1	
Skin and subcutaneous tissue disorders			
Periorbital oedema			
subjects affected / exposed	0 / 12 (0.00%)	1 / 12 (8.33%)	
occurrences (all)	0	1	
Renal and urinary disorders			
Proteinuria			
subjects affected / exposed	1 / 12 (8.33%)	0 / 12 (0.00%)	
occurrences (all)	1	0	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
11 February 2004	<ul style="list-style-type: none">•The number of study centers was revised from up to 8 to up to 9 study centers due to slower than anticipated subject enrollment.•The requirement that pretest evaluations be performed and study drug be administered at 8 AM was changed to "in the morning" on Day 1, Days 3 and 4, and Days 5 and 6, from 8 AM to "approximately the same time in the morning as on Day 1." This change was also made for subjects who returned to the site on Day 7 (8 AM in the original protocol was changed to "approximately the same time as on Day 1"). This revision was made to allow for the variability in subjects' schedule, especially during the school year.•Inclusion criterion #7 that required normal laboratory findings in the original Study Protocol was deleted in Amendment 01. This change was made to allow screening of subjects whose laboratory test results values were outside the defined normal range but considered to be "normal" for that subject or were values that were not clinically significant.•Because of the high frequency of smoking and alcohol use encountered the population under study, Exclusion criterion 3 was modified. The original Study Protocol stated that subjects with a known or suspected history of tobacco use, alcohol, or drug misuse within the past three months were excluded. Amendment 01 changed this to the following: "subjects who were unwilling or unable to refrain from smoking or drinking alcohol starting from 48 hours prior to screening and dosing, through the end of the study, and/or a positive urine drug screen were excluded."•Based on the change to Exclusion criterion 3, Section 4.4 (Prohibitions and Restrictions during the Study) of the Study Protocol, had the following addition in Amendment 01: "subjects may not receive any recreational drugs, tobacco, and alcohol during study participation and within 48 hours of admission to the clinical site."
11 February 2004	<p>Continuation of Amendment 1:</p> <ul style="list-style-type: none">• Based on the change to Section 4.4 of the Study Protocol noted above, the following statement was deleted from Section 4.5 (Concomitant Medications): "subjects may not receive any recreational drugs and alcohol during study participation and within 72 hours of admission to the clinical site."• The list of drug substances to be assayed in the urine drug screen (Section 7.5.4 of the Study Protocol, Appendix 16.1.1) was modified to exclude nicotine/cotinine in Amendment 01.• Appendix 5 was added in Amendment 01 to provide the procedure for processing samples for CYP2C 19 genotyping.• In Amendment 01, revisions for the processing, storage, and shipping of the blood samples for PK assays were made to Appendix IV. The laboratory processing these samples was changed from PRACS Institute, Ltd. to Quest Pharmaceutical Services, L.C.C.• New contact information for responsible EMR personnel was provided in Amendment 01. <p>There were no changes to the planned analyses.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
