

## Clinical trial results:

### Open-label Phase 2 study evaluating efficacy and safety of SAR566658 treatment in patients with CA6 positive metastatic Triple Negative Breast Cancer

#### Summary

EudraCT number	2016-001962-27
Trial protocol	NL BE ES FR CZ IT
Global end of trial date	07 September 2018

#### Results information

Result version number	v1 (current)
This version publication date	25 August 2019
First version publication date	25 August 2019

#### Trial information

##### Trial identification

Sponsor protocol code	ACT14884
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02984683
WHO universal trial number (UTN)	U1111-1182-7044

Notes:

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	05 November 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	07 September 2018
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

To evaluate the tumour Objective Response Rate (ORR), according to the Response Evaluation Criteria in Solid Tumours (RECIST 1.1) of SAR566658 in subjects with CA6-positive metastatic triple negative breast cancer (TNBC).

Part 1: To select the SAR566658 dose based on ORR and safety of 2 dose levels of SAR566658 in subjects with metastatic TNBC overexpressing CA6 (membrane intensity of 2+, 3+ in  $\geq 30$  percent(%) of tumour cells).

Part 2: -Part 2a: To demonstrate the activity of SAR566658 based on ORR in subjects with metastatic TNBC overexpressing CA6 (membrane intensity of 2+, 3+ in  $\geq 30\%$  of tumour cells) treated at the selected dose in an expanded cohort, in addition to the subjects treated in Part 1,

- Part 2b: To assess the efficacy of SAR566658 based on ORR in subjects with metastatic TNBC and mild CA6 expression (with at least 1% positive tumour cells at intensity  $\geq 1+$  and  $< 30\%$  of tumour cells at intensity of 2+, 3+) treated at the selected dose in "mild CA6 expression cohort".

Protection of trial subjects:

Subjects were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time in language and terms appropriate for the subject and considering the local culture. During the course of the trial, subjects were provided with individual subject cards indicating the nature of the trial the subject was participating, contact details and any information needed in the event of a medical emergency. Collected personal data and human biological samples were processed in compliance with the Sanofi-Aventis Group Personal Data Protection Charter ensuring that the Group abides by the laws governing personal data protection in force in all countries in which it operates.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	23 March 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Italy: 3
Country: Number of subjects enrolled	Netherlands: 3
Country: Number of subjects enrolled	Spain: 14
Country: Number of subjects enrolled	Belgium: 2
Country: Number of subjects enrolled	Czech Republic: 1
Worldwide total number of subjects	23
EEA total number of subjects	23

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	19
From 65 to 84 years	4
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study was conducted at 13 sites in 5 countries from 23 March 2017 to 07 September 2018.

### Pre-assignment

Screening details:

A total of 23 subjects who met all of the inclusion criteria and none of the exclusion criteria were enrolled in the study and included in Part 1. The study was prematurely terminated due to safety reasons, hence Part 2 was not conducted and no analysis was performed.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	SAR566658 90 mg/m <sup>2</sup>

Arm description:

Subjects received SAR566658 90 mg/m<sup>2</sup> as intravenous infusion on Day 1 and Day 8 of each 21-day treatment cycle (maximum number of cycles received was 3).

Arm type	Experimental
Investigational medicinal product name	SAR566658
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

SAR566658 90 mg/m<sup>2</sup>, intravenous infusion on Day 1 and 8 of each 21-day treatment cycle.

<b>Arm title</b>	SAR566658 120 mg/m <sup>2</sup>
------------------	---------------------------------

Arm description:

Subjects received SAR566658 120 mg/m<sup>2</sup> as intravenous infusion on Day 1 and Day 8 of each 21-day treatment cycle (maximum number of cycles received was 3).

Arm type	Experimental
Investigational medicinal product name	SAR566658
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

SAR566658 120 mg/m<sup>2</sup>, intravenous infusion on Day 1 and 8 of each 21-day treatment cycle.

<b>Number of subjects in period 1</b>	<b>SAR566658 90 mg/m<sup>2</sup></b>	<b>SAR566658 120 mg/m<sup>2</sup></b>
Started	11	12
Completed	0	0
Not completed	11	12
Disease progression	7	9
Adverse event	3	3
Withdrawal by subject	1	-

## End points

### End points reporting groups

Reporting group title	SAR566658 90 mg/m <sup>2</sup>
Reporting group description: Subjects received SAR566658 90 mg/m <sup>2</sup> as intravenous infusion on Day 1 and Day 8 of each 21-day treatment cycle (maximum number of cycles received was 3).	
Reporting group title	SAR566658 120 mg/m <sup>2</sup>
Reporting group description: Subjects received SAR566658 120 mg/m <sup>2</sup> as intravenous infusion on Day 1 and Day 8 of each 21-day treatment cycle (maximum number of cycles received was 3).	

### Primary: Number of Subjects With Investigational Medicinal Product (IMP)-Related Predefined Safety Criteria Findings

End point title	Number of Subjects With Investigational Medicinal Product (IMP)-Related Predefined Safety Criteria Findings <sup>[1]</sup>
End point description: Predefined safety criteria was defined as occurrence of any following IMP-related treatment emergent adverse event (TEAE) (based on National Cancer Institute Common Terminology Criteria for Adverse Events [NCI CTCAE] v4.03): Grade $\geq 3$ TEAE from the System Organ Class (SOC) of eye disorders, Grade $\geq 3$ peripheral neuropathy (Preferred Term), Grade $\geq 4$ TEAE. Only those categories in which at least 1 subject had data were reported. Per NCI-CTCAE v4.03, Adverse Events (AE) were graded as follows: Grade 1: Mild; asymptomatic/mild symptoms; Grade 2: Moderate; minimal, local or non-invasive intervention indicated; Grade 3: Severe or medically significant; hospitalization or prolongation of hospitalization indicated; Grade 4: Life-threatening consequences; Grade 5: Death related to AE. Analysis was performed on evaluable for predefined safety criteria population which included subjects treated in the study and had completed 2 cycles, or who experienced predefined safety criteria.	
End point type	Primary
End point timeframe: Up to Cycle 2 (each cycle of 21 days)	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As the endpoint is descriptive in nature, hence no statistical analysis was provided.

End point values	SAR566658 90 mg/m <sup>2</sup>	SAR566658 120 mg/m <sup>2</sup>		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	9	9		
Units: Subjects				
number (not applicable)				
Grade $\geq 3$ related TEAE from SOC Eye disorders	2	2		

### Statistical analyses

No statistical analyses for this end point

### Primary: Percentage of Subjects With Objective Response

End point title	Percentage of Subjects With Objective Response <sup>[2]</sup>
-----------------	---

**End point description:**

Objective Response in subjects was defined as the subjects with complete response (CR) and partial response (PR) as best response according to RECIST 1.1. As per RECIST 1.1, CR was defined as disappearance of all target lesions. Any pathological lymph nodes (whether target or non-target) must have reduction in short axis to <10 millimeter (mm). PR was defined as at least a 30% decrease in the sum of diameters of target lesions, taking as reference the baseline sum diameters. Analysis was performed on all-treated population which included subjects who actually received at least 1 dose or any partial dose of SAR566658.

End point type	Primary
----------------	---------

**End point timeframe:**

From Baseline, every 6 weeks until radiological disease progression or study cut-off, whichever comes first (maximum number of cycles was 3, each cycle 21 days)

**Notes:**

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As the endpoint is descriptive in nature, hence no statistical analysis was provided.

End point values	SAR566658 90 mg/m <sup>2</sup>	SAR566658 120 mg/m <sup>2</sup>		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	11	12		
Units: percentage of subjects				
number (confidence interval 80%)	9.1 (1.0 to 31.0)	8.3 (0.9 to 28.7)		

**Statistical analyses**

No statistical analyses for this end point

**Secondary: Percentage of Subjects With Disease Control**

End point title	Percentage of Subjects With Disease Control
-----------------	---

**End point description:**

Disease control in subjects was defined as the subjects with CR, PR and stable disease (SD) with a duration of at least 3 months. As per RECIST 1.1, CR was defined as the disappearance of all target lesions. Any pathological lymph nodes (whether target or non-target) must have reduction in short axis to <10 mm. PR was defined as at least a 30% decrease in the sum of diameters of target lesions, taking as reference the baseline sum diameters. SD was defined as Neither sufficient shrinkage to qualify for PR nor sufficient increase to qualify for progressive disease (at least a 20% increase in the sum of diameters of target lesions taking as reference the smallest sum diameters while on study. Data for this endpoint was not collected and analysed due to early termination of the study.

End point type	Secondary
----------------	-----------

**End point timeframe:**

From Baseline, every 6 weeks until radiological disease progression or study cut-off, whichever comes first (maximum number of cycles was 3, each cycle 21 days)

End point values	SAR566658 90 mg/m <sup>2</sup>	SAR566658 120 mg/m <sup>2</sup>

number (not applicable)				

Notes:

[3] - Data was not collected and analysed due to early termination of the study.

[4] - Data was not collected and analysed due to early termination of the study.

## Statistical analyses

No statistical analyses for this end point

### Secondary: Duration of response (DOR)

End point title	Duration of response (DOR)
-----------------	----------------------------

End point description:

DOR was defined as the time from the first documentation of objective tumour response (CR or PR) to the first radiological documentation of tumour progression or death (due to any cause), whichever comes first. As per RECIST 1.1, CR was defined as the disappearance of all target lesions. Any pathological lymph nodes (whether target or non-target) must have reduction in short axis to <10 mm. PR was defined as at least a 30% decrease in the sum of diameters of target lesions, taking as reference the baseline sum diameters. Progressive disease was defined as at least a 20% increase in the sum of diameters of target lesions. Data for this endpoint was not collected and analysed due to early termination of the study.

End point type	Secondary
----------------	-----------

End point timeframe:

From Baseline, every 6 weeks until radiological disease progression or study cut-off, whichever comes first (maximum number of cycles was 3, each cycle 21 days)

number (not applicable)				

Notes:

[5] - Data was not collected and analysed due to early termination of the study.

[6] - Data was not collected and analysed due to early termination of the study.

## Statistical analyses

No statistical analyses for this end point

### Secondary: Progression free survival (PFS)

End point title	Progression free survival (PFS)
-----------------	---------------------------------

End point description:

PFS was defined as the time interval between the date of first study treatment administration and the date of documented tumour progression or death (due to any cause), whichever comes first. As per RECIST 1.1, Progression was defined as at least a 20% increase in the sum of diameters of target lesions. Data for this endpoint was not collected and analysed due to early termination of the study.

End point type	Secondary
----------------	-----------

End point timeframe:

From Baseline, every 6 weeks until radiological disease progression or study cut-off, whichever comes first (maximum number of cycles was 3, each cycle 21 days)

End point values	SAR566658 90 mg/m <sup>2</sup>	SAR566658 120 mg/m <sup>2</sup>		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	0 <sup>[7]</sup>	0 <sup>[8]</sup>

number (not applicable)				

Notes:

[7] - Data was not collected and analysed due to early termination of the study.

[8] - Data was not collected and analysed due to early termination of the study.

### Statistical analyses

No statistical analyses for this end point

### Secondary: Time to Tumour progression (TTP)

End point title	Time to Tumour progression (TTP)
-----------------	----------------------------------

End point description:

TTP was defined as the time interval between the date of first study treatment administration and the date of the first radiologically documented tumour progression. As per RECIST 1.1, progression was defined as at least a 20% increase in the sum of diameters of target lesions, taking as reference the smallest sum on study. Data for this endpoint was not collected and analysed due to early termination of the study.

End point type	Secondary
----------------	-----------

End point timeframe:

From Baseline, every 6 weeks until radiological disease progression or study cut-off, whichever comes first (maximum number of cycles was 3, each cycle 21 days)

End point values	SAR566658 90 mg/m <sup>2</sup>	SAR566658 120 mg/m <sup>2</sup>		
Subject group type	Reporting group	Reporting group

Units: days				
number (not applicable)				

Notes:

[9] - Data was not collected and analysed due to early termination of the study.

[10] - Data was not collected and analysed due to early termination of the study.

### Statistical analyses

No statistical analyses for this end point

### Secondary: Number of Subjects With Treatment Emergent Adverse Events and Serious Adverse Events (SAE)

End point title	Number of Subjects With Treatment Emergent Adverse Events and Serious Adverse Events (SAE)
-----------------	--

End point description:

AE was defined as any untoward medical occurrence in a subject who received study drug and did not necessarily had a causal relationship with the treatment. TEAEs were defined as AEs that developed or worsened in grade or became serious during the on-treatment period (the time from the first treatment

administration to the last treatment administration +30 days). An SAE is any untoward medical occurrence that at any dose: results in death, Is life-threatening, requires inpatient hospitalization or prolongation of existing hospitalization, results in persistent or significant disability / incapacity, is a congenital anomaly / birth defect, is a medically important event. Analysis was performed on all treated population.

End point type	Secondary
End point timeframe:	
Up to 30 days after last drug administration

Any treatment emergent SAE	1	6		
Any TEAE leading to treatment discontinuation	3	3		

## Statistical analyses

No statistical analyses for this end point

## Secondary: Number of Subjects with Keratopathies (corneal toxicity)

End point title	Number of Subjects with Keratopathies (corneal toxicity)
End point description:	
Keratopathy is an eye disorder that involves a blister-like swelling of the cornea (the clear layer in front of the iris and pupil). All subjects received ocular primary prophylaxis in each eye in order to prevent the occurrence of keratopathies at the time of each infusion (vasoconstrictor, ophthalmic topical steroid, and cold mask on eyes) and steroid eye drops for an additional 2 days following SAR566658 administration. Analysis was performed on all treated population.	
End point type	Secondary
End point timeframe:	
Up to 30 days after last drug administration	

End point values	SAR566658 90 mg/m <sup>2</sup>	SAR566658 120 mg/m <sup>2</sup>		
Subject group type	Reporting group	Reporting group

number (not applicable)				

Notes:

[11] - Data was not collected and analysed due to early termination of the study.

[12] - Data was not collected and analysed due to early termination of the study.

## Statistical analyses

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse event (AE) data was collected from the baseline up to 3 treatment cycles, each cycle 21 days.

Adverse event reporting additional description:

Reported AEs are treatment-emergent adverse events i.e. AEs that developed/worsened during 'treatment period' (time from the first treatment administration to the last treatment administration + 30 days). Analysis was performed on safety population which included all subjects who received at least 1 dose (or any partial) of SAR566658.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

### Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
07 September 2018	Analysis after the first 20 subjects had been enrolled revealed a higher than expected rate of non-serious ophthalmic TEAEs identified as keratitis and keratopathy leading to dose modification and/or treatment discontinuation in both the 90 mg/m <sup>2</sup> and 120 mg/m <sup>2</sup> treatment groups which is not outweighed by a significant clinical benefit with SAR566658 and led to decision to prematurely stop the study. The corneal prophylaxis administered to all subjects does not show a positive impact on incidence of the events. The preliminary efficacy analysis indicated that the ORR was not likely to support the continuation of the study.	-

Notes:

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The study was prematurely terminated due to safety reasons, hence Part 2 was not conducted and no analysis was performed.

Notes:
