

## Clinical trial results:

### A Single-Arm, Open-Label, Multicenter, Extended Treatment, Safety Study in Patients Treated With Talazoparib

#### Summary

EudraCT number	2016-001972-31
Trial protocol	GB HU PL DE
Global end of trial date	20 July 2021

#### Results information

Result version number	v1 (current)
This version publication date	23 June 2022
First version publication date	23 June 2022

#### Trial information

##### Trial identification

Sponsor protocol code	MDV3800-13 (C3441010)
-----------------------	-----------------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02921919
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Pfizer Inc.
Sponsor organisation address	235 E42nd Street, New York, United States, NY 10017
Public contact	Pfizer ClinicalTrials.gov Call Center, Pfizer Inc., 001 8007181021, ClinicalTrials.gov_Inquiries@pfizer.com
Scientific contact	Pfizer ClinicalTrials.gov Call Center, Pfizer Inc., 001 8007181021, ClinicalTrials.gov_Inquiries@pfizer.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 December 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	20 July 2021
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The main objective of the study was to obtain additional safety data on long-term talazoparib use.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	08 November 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 23
Country: Number of subjects enrolled	France: 1
Country: Number of subjects enrolled	Germany: 1
Country: Number of subjects enrolled	Hungary: 10
Country: Number of subjects enrolled	Moldova, Republic of: 1
Country: Number of subjects enrolled	Poland: 5
Country: Number of subjects enrolled	Russian Federation: 14
Country: Number of subjects enrolled	United Kingdom: 1
Country: Number of subjects enrolled	United States: 62
Worldwide total number of subjects	118
EEA total number of subjects	17

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	68
From 65 to 84 years	47
85 years and over	3

## Subject disposition

### Recruitment

Recruitment details:

Eligible subjects who received talazoparib as a single agent or in combination with another agent in following qualifying studies: PRP-001(NCT01286987), MDV3800-01(NCT02997163), MDV3800-02(NCT02997176), MDV3800-03(NCT03070548), MDV3800-04(NCT03077607), MDV3800-14(NCT03042910) continued talazoparib therapy as single agent in this extension study.

### Pre-assignment

Screening details:

A total of 120 subjects were enrolled in the study of which 118 subjects received the study treatment.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Initial Dose Talazoparib: < 1 mg/day

Arm description:

Subjects were administered talazoparib capsules at an initial dose (i.e. the last tolerated dose in the originating study) of less than (<) 1 milligram (mg) orally once daily. Subjects received talazoparib till the investigator considered treatment to be providing clinical benefit or until other study discontinuation criteria were met. Subjects were followed-up for safety until 30 days after the last dose of talazoparib (i.e., permanent discontinuation) or before initiation of a new antineoplastic therapy, whichever occurred first.

Arm type	Experimental
Investigational medicinal product name	Talazoparib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Subjects received talazoparib capsules at an initial dose (i.e. the last tolerated dose in the originating study) of < 1 mg orally once daily.

<b>Arm title</b>	Initial Dose Talazoparib: 1 mg/day
------------------	------------------------------------

Arm description:

Subjects were administered talazoparib capsules at an initial dose (i.e. the last tolerated dose in the originating study) of 1 mg orally once daily. Subjects received talazoparib till the investigator considered treatment to be providing clinical benefit or until other study discontinuation criteria were met. Subjects were followed-up for safety until 30 days after the last dose of talazoparib (i.e., permanent discontinuation) or before initiation of a new antineoplastic therapy, whichever occurred first.

Arm type	Experimental
Investigational medicinal product name	Talazoparib

## End points

### End points reporting groups

Reporting group title	Initial Dose Talazoparib: < 1 mg/day
Reporting group description:	
Subjects were administered talazoparib capsules at an initial dose (i.e. the last tolerated dose in the originating study) of less than (<) 1 milligram (mg) orally once daily. Subjects received talazoparib till the investigator considered treatment to be providing clinical benefit or until other study discontinuation criteria were met. Subjects were followed-up for safety until 30 days after the last dose of talazoparib (i.e., permanent discontinuation) or before initiation of a new antineoplastic therapy, whichever occurred first.	
Reporting group title	Initial Dose Talazoparib: 1 mg/day
Reporting group description:	
Subjects were administered talazoparib capsules at an initial dose (i.e. the last tolerated dose in the originating study) of 1 mg orally once daily. Subjects received talazoparib till the investigator considered treatment to be providing clinical benefit or until other study discontinuation criteria were met. Subjects were followed-up for safety until 30 days after the last dose of talazoparib (i.e., permanent discontinuation) or before initiation of a new antineoplastic therapy, whichever occurred first.	

### Primary: Number of Subjects With Treatment-Emergent Adverse Events (TEAEs), Treatment Emergent Serious Adverse Events (SAEs), Treatment Emergent Treatment Related AEs and Treatment Emergent Treatment Related SAEs

End point title	Number of Subjects With Treatment-Emergent Adverse Events (TEAEs), Treatment Emergent Serious Adverse Events (SAEs), Treatment Emergent Treatment Related AEs and Treatment Emergent Treatment Related SAEs <sup>[1]</sup>
End point description:	
An adverse event (AE) was any untoward medical occurrence in a subject administered a study drug without regard to possibility of a causal relationship. SAE was any untoward medical occurrence that at any dose resulted in death; inpatient hospitalisation or prolongation of existing hospitalisation; was life-threatening (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly/birth defect or was considered as an important medical event. TEAEs were AEs that occurred on or after the administration of first dose of study drug through approximately 30 days after the last dose. AE included both SAEs and all non-SAEs. Treatment-related TEAEs were defined as any TEAE with at least a possible relationship to the study drug as assessed by the investigator or that was missing the assessment of causal relationship whose relationship to the study drug could not be ruled out. Safety population included all subjects who received any amount of talazoparib.	
End point type	Primary
End point timeframe:	
From start of study treatment up to 30 days after last dose of study treatment or before initiation of a new antineoplastic therapy, whichever occurred first (approximately maximum for 4.6 years)	

#### Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive analysis was planned for this endpoint.

End point values	Initial Dose Talazoparib: < 1 mg/day	Initial Dose Talazoparib: 1 mg/day		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	66	52		
Units: Subjects				
TEAE	63	47		
SAE	27	18		
Treatment-related TEAEs	45	31		
Treatment-related SAEs	6	3		

## Statistical analyses

No statistical analyses for this end point

### Primary: Number of Subjects With Grade 3 or 4 TEAEs Based on National Cancer Institute Common Terminology Criteria for Adverse Events (NCI-CTCAE) Version 4

End point title	Number of Subjects With Grade 3 or 4 TEAEs Based on National Cancer Institute Common Terminology Criteria for Adverse Events (NCI-CTCAE) Version 4 <sup>[2]</sup>
-----------------	---

#### End point description:

An AE was any untoward medical occurrence in a subject administered a study drug without regard to possibility of a causal relationship. TEAEs were AEs that occurred on or after the administration of first dose of study drug through approximately 30 days after the last dose. Severity was graded using NCI-CTCAE version 4 where, Grade 1: mild AE; Grade 2: moderate AE; Grade 3: severe AE; Grade 4: life-threatening consequences, urgent intervention indicated; Grade 5: death related to AE. Number of subjects with Grade 3 or 4 TEAEs were reported. Safety population included all subjects who received any amount of talazoparib.

End point type	Primary
----------------	---------

#### End point timeframe:

From start of study treatment up to 30 days after last dose of study treatment or before initiation of a new antineoplastic therapy, whichever occurred first (approximately maximum for 4.6 years)

#### Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive analysis was planned for this endpoint.

End point values	Initial Dose Talazoparib: < 1 mg/day	Initial Dose Talazoparib: 1 mg/day		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	66	52		
Units: Subjects	38	32		

## Statistical analyses

No statistical analyses for this end point

### Primary: Number of Subjects With TEAEs Leading to Dose Reduction, Permanent Study Drug Discontinuation and Death

End point title	Number of Subjects With TEAEs Leading to Dose Reduction, Permanent Study Drug Discontinuation and Death <sup>[3]</sup>
-----------------	--

#### End point description:

An AE was any untoward medical occurrence in a subject administered a study drug without regard to possibility of a causal relationship. TEAEs were AEs that occurred on or after the administration of first dose of study drug through approximately 30 days after the last dose. Number of subjects with TEAEs leading to dose reduction, permanent study drug discontinuation and death were reported. Safety population included all subjects who received any amount of talazoparib.

End point type	Primary
----------------	---------

End point timeframe:

From start of study treatment up to 30 days after last dose of study treatment or before initiation of a new antineoplastic therapy, whichever occurred first (approximately maximum for 4.6 years)

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive analysis was planned for this endpoint.

End point values	Initial Dose Talazoparib: < 1 mg/day	Initial Dose Talazoparib: 1 mg/day		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	66	52		
Units: Subjects				
TEAE leading to dose reduction	6	7		
TEAE leading to study drug discontinuation	5	4		
TEAE leading to death	7	7		

## Statistical analyses

No statistical analyses for this end point

## Primary: Number of Subjects With Clinically Significant Laboratory Abnormalities: Liver Function Tests

End point title	Number of Subjects With Clinically Significant Laboratory Abnormalities: Liver Function Tests <sup>[4]</sup>
-----------------	--

End point description:

The following liver parameters were analysed: aspartate transaminase (AST), alanine aminotransferase (ALT), total bilirubin (TBL) and alkaline phosphatase (ALP). The criteria for clinically significant abnormalities for liver parameters included AST or ALT greater than or equal to ( $\geq$ ) 3 times upper limit of normal (ULN); ALT or AST greater than ( $>$ ) 5 times ULN; ALT or AST  $>$  10 times ULN; ALT or AST  $>$  20 times ULN; total TBL  $>$  2 times ULN; ALT or AST  $\geq$  3 times ULN and TBL  $>$  2 times ULN and ALT or AST  $\geq$  3 times ULN and TBL  $>$  2 times ULN and ALP  $<$  2 times ULN. Safety population included all subjects who received any amount of talazoparib. Here, "number of subjects analysed" signifies number of subjects who were evaluable for this end point.

End point type	Primary
----------------	---------

End point timeframe:

From start of study treatment up to 30 days after last dose of study treatment or before initiation of a new antineoplastic therapy, whichever occurred first (approximately maximum for 4.6 years)

Notes:

[4] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive analysis was planned for this endpoint.

End point values	Initial Dose Talazoparib: < 1 mg/day	Initial Dose Talazoparib: 1 mg/day		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	61	50		
Units: Subjects				
ALT or AST $\geq$ 3*ULN	5	2		
ALT or AST $>$ 5*ULN	0	0		
ALT or AST $>$ 10*ULN	0	0		
ALT or AST $>$ 20*ULN	0	0		

TBL > 2*ULN	4	0		
ALT or AST >= 3*ULN and TBL > 2*ULN	2	0		
ALT or AST >=3*ULN and TBL > 2*ULN and ALP <2*ULN	0	0

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From start of study treatment up to 30 days after last dose of study treatment or before initiation of a new antineoplastic therapy, whichever occurred first (approximately maximum for 4.6 years)

Adverse event reporting additional description:

An AE term may be reported as both a serious and non-serious AE, but are distinct events. An AE may be serious for 1 subject and non-serious for another subject, or a subject may have experienced both a serious and non-serious episode of the same event. Safety population included all subjects who received any amount of talazoparib.

Assessment type	Non-systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 November 2018	The exclusion criteria of the study was updated to ensure the values of hemoglobin and platelet count were in line with the inclusion criteria of the originating Study MDV3800-02/C3441002 from version 4.0 onward for subjects with moderate/severe hepatic impairment to allow extended treatment with talazoparib after completion of the originating study. Talazoparib Dose Modifications guidelines had also been updated to reflect the changes of the exclusion criteria.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

In age group breakdown, data included 2 untreated subjects and excluded 2 subjects with missing data as presented in the age categorical field of baseline section. This is done due to database limitation as there is no option to report missing data.

Notes:
