

## Clinical trial results:

### Immunogenicity and Safety of Sanofi Pasteur's DTaP-IPV-Hep B-PRP-T Combined Vaccine Given at 6, 10, and 14 Weeks of Age in Infants in India Who Previously Received a Dose of Hepatitis B Vaccine at Birth Summary

EudraCT number	2016-002089-29
Trial protocol	Outside EU/EEA
Global end of trial date	14 October 2014

#### Results information

Result version number	v1 (current)
This version publication date	11 June 2016
First version publication date	11 June 2016

#### Trial information

##### Trial identification

Sponsor protocol code	A3L33
-----------------------	-------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01948193
WHO universal trial number (UTN)	U1111-1127-6936
Other trial identifiers	Clinical Trial Registry India: CTRI/2013/09/003997

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 March 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	14 October 2014
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To evaluate the immunogenicity of the study vaccine in terms of seroprotection (diphtheria toxoid, tetanus toxoid, poliovirus types 1, 2, and 3, Haemophilus influenza type b [Hib] polysaccharide [PRP], hepatitis B [Hep B]) and vaccine response for pertussis antigens (pertussis toxoid [PT] and filamentous haemagglutinin [FHA]) one month after the third dose.

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were vaccinated in the study. Vaccinations were performed by qualified and trained study personnel. Subjects with allergy to any of the vaccine components were not vaccinated. After vaccination, subjects were also kept under clinical observation for 30 minutes to ensure their safety. Appropriate medical equipment was also available on site in case of any immediate allergic reactions.

Background therapy:

All subjects enrolled in this study received a documented dose of any commercial available oral poliovirus vaccine (OPV) and recombinant Hepatitis B monovalent vaccine at birth according to the National Immunization Program (NIP) in India.

Evidence for comparator:

Not applicable

Actual start date of recruitment	19 February 2014
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	India: 177
Worldwide total number of subjects	177
EEA total number of subjects	0

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	177

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Study subjects were enrolled from 19 February 2014 to 30 June 2014 at 2 clinic sites in India.

### Pre-assignment

Screening details:

A total of 177 subjects who met all of the inclusion criteria and none of the exclusion criteria were enrolled and vaccinated.

### Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

Not applicable

### Arms

<b>Arm title</b>	All Infants; DTaP-IPV-Hep B-PRP~T
------------------	-----------------------------------

Arm description:

Infants aged 6 to 8 weeks received 3 injections of Sanofi Pasteur's DTaP-IPV-Hep B-PRP~T combined vaccine at 6, 10, and 14 weeks of age following a documented dose of a commercial oral poliovirus vaccine and recombinant Hepatitis B monovalent vaccine at birth.

Arm type	Experimental
Investigational medicinal product name	DTaP-IPV-Hep B-PRP~T combined vaccine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

0.5 mL, intramuscular into the anterolateral aspect of the right thigh, 1 injection each at 6, 10, and 14 weeks

<b>Number of subjects in period 1</b>	All Infants; DTaP-IPV-Hep B-PRP~T
Started	177
Completed	168
Not completed	9
Serious event	2
Lost to follow-up	7

## Baseline characteristics

### Reporting groups

Reporting group title	All Infants; DTaP-IPV-Hep B-PRP~T
-----------------------	-----------------------------------

Reporting group description:

Infants aged 6 to 8 weeks received 3 injections of Sanofi Pasteur's DTaP-IPV-Hep B-PRP~T combined vaccine at 6, 10, and 14 weeks of age following a documented dose of a commercial oral poliovirus vaccine and recombinant Hepatitis B monovalent vaccine at birth.

Reporting group values	All Infants; DTaP-IPV-Hep B-PRP~T	Total	
Number of subjects	177	177	
Age categorical			
Units: Subjects			
In utero	0	0	
Preterm newborn infants (gestational age < 37 wks)	0	0	
Newborns (0-27 days)	0	0	
Infants and toddlers (28 days-23 months)	177	177	
Children (2-11 years)	0	0	
Adolescents (12-17 years)	0	0	
Adults (18-64 years)	0	0	
From 65-84 years	0	0	
85 years and over	0	0	
Age continuous			
Units: weeks			
arithmetic mean	6.9		
standard deviation	± 0.6	-	
Gender categorical			
Units: Subjects			
Female	78	78	
Male	99	99	

## End points

### End points reporting groups

Reporting group title	All Infants; DTaP-IPV-Hep B-PRP~T
Reporting group description:	
Infants aged 6 to 8 weeks received 3 injections of Sanofi Pasteur's DTaP-IPV-Hep B-PRP~T combined vaccine at 6, 10, and 14 weeks of age following a documented dose of a commercial oral poliovirus vaccine and recombinant Hepatitis B monovalent vaccine at birth.	

### Primary: Percentage of Subjects With Seroprotection After Vaccinations With Sanofi Pasteur's DTaP-IPV-HB-PRP-T Combined Vaccine Following a Documented Dose of a Commercial Oral Poliovirus Vaccine and Recombinant Hep B Monovalent Vaccine at Birth

End point title	Percentage of Subjects With Seroprotection After Vaccinations With Sanofi Pasteur's DTaP-IPV-HB-PRP-T Combined Vaccine Following a Documented Dose of a Commercial Oral Poliovirus Vaccine and Recombinant Hep B Monovalent Vaccine at Birth <sup>[1]</sup>
-----------------	---

#### End point description:

Diphtheria antibodies were measured by a toxin neutralization test, tetanus antibodies by an enzyme-linked immunosorbent assay (ELISA), Haemophilus influenzae type b polysaccharide (PRP) antibodies by Farr type radioimmunoassay, poliovirus 1, 2, and 3 antibodies by a neutralization assay, and Hepatitis B (Hep B) antibodies were measured by VITROS ECI/ECIQ Immunodiagnostic System.

Description of seroprotection: Diphtheria and Tetanus antibody concentrations  $\geq 0.01$  International Units (IU)/mL; Poliovirus 1, 2, and 3 titers  $\geq 8$  (1/dilution); Hep B concentrations  $\geq 10$  mIU/mL, and PRP  $\geq 0.15$   $\mu$ g/mL.

End point type	Primary
----------------	---------

#### End point timeframe:

Pre-dose 1 to one month post-dose 3

#### Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive analyses were performed based on the study group and study vaccine administered for this outcome.

<b>End point values</b>	All Infants; DTaP-IPV-Hep B-PRP~T			
Subject group type	Reporting group			
Number of subjects analysed	156			
Units: Percentage of subjects				
number (not applicable)				
Anti-Diphtheria; Post-dose 3, $\geq 0.01$	99.3			
Anti-Tetanus; Post-dose 3, $\geq 0.01$	100			
Anti-Polio 1; Post-dose 3	100			
Anti-Polio 2; Post-dose 3	100			
Anti-Polio 3; Post-dose 3	100			
Anti-Hep B; Post-dose 3, $\geq 10$	100			
Anti-PRP; Post-dose 3, $\geq 0.15$	100			

## Statistical analyses

**Primary: Percentage of Subjects With Vaccine Response After Vaccinations With Sanofi Pasteur's DTaP-IPV-HB-PRP-T Combined Vaccine Following a Documented Dose of a Commercial Oral Poliovirus Vaccine and Recombinant Hep B Monovalent Vaccine at Birth**

End point title	Percentage of Subjects With Vaccine Response After Vaccinations With Sanofi Pasteur's DTaP-IPV-HB-PRP-T Combined Vaccine Following a Documented Dose of a Commercial Oral Poliovirus Vaccine and Recombinant Hep B Monovalent Vaccine at Birth <sup>[2]</sup>
-----------------	---

## End point description:

Anti-pertussis toxin (PT) and anti-filamentous hemagglutinin (FHA) antibodies were measured with an ELISA. Vaccine response was defined as percentage of participants with post-dose 3 anti-PT and anti-FHA antibody concentrations in ELISA units (EU)/mL  $\geq 4 \times$  Lower Limit of Quantification (LLOQ) if pre-vaccination concentration was  $< 4 \times$  LLOQ or  $\geq$  pre-vaccination concentration if pre-vaccination concentrations  $\geq 4 \times$  LLOQ.

End point type	Primary
----------------	---------

## End point timeframe:

Pre-dose 1 to one month post-dose 3

## Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive analyses were performed based on the study group and study vaccine administered for this outcome.

<b>End point values</b>	All Infants; DTaP-IPV-Hep B-PRP~T			
Subject group type	Reporting group			
Number of subjects analysed	156			
Units: Percentage of subjects				
number (not applicable)				
Anti-PT; Pre-dose 1	59.9			
Anti-PT; Vaccine response	93.8			
Anti-PT; $\geq 4$ -fold increase	88.4			
Anti-FHA; Pre-dose 1	88.7			
Anti-FHA; Vaccine response	99.3			
Anti-FHA; $\geq 4$ -fold increase	90.5

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[2] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[3] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[4] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[5] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data

were available for the event during the period.

[6] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[7] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[8] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

[9] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: This was a solicited adverse event recorded in a diary card within 7 days of vaccination; the total number (N) reflects those subjects for which the diary cards were returned and for which data were available for the event during the period.

## **More information**
