Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	24 April 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	31 March 2017
Global end of trial reached?	Yes
Global end of trial date	25 May 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To determine the effect of FLU-v on reducing the incidence of Mild to Moderate Influenza Disease (MMID) defined as detectable viral shedding plus at least one symptom of influenza.

Protection of trial subjects:

Subjects were submitted to two subcutaneous injections with vaccine or placebo, blood samplings, intranasal inoculation with influenza virus and nasal swabs.

There were minimal risks to these procedures as they were performed by trained personnel.

Doctors and nurses were always available if subjects had any concerns or suffered any discomfort.

Subjects were

allowed to take over the counter anti-inflammatories to alleviate any adverse events post-vaccination.

Subjects remained under observation for 30min post-vaccination.

Subjects were closely monitored under quarantine after inoculation with influenza virus. The virus was GMP manufactured, dosage was optimised in previous clinical trials approved by the FDA sponsored by NIAID-NIH, US.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 July 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 153
Worldwide total number of subjects	153
EEA total number of subjects	153

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	153
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Recruitment took place at two UK sites, London and Manchester, during Q3 and Q4 of 2017.

Pre-assignment

Screening details:

Only subjects with an HAI<40 for the influenza challenge strain at the time of screening were allowed to enrol the study.

Period 1

Period 1 title	Baseline (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor

Blinding implementation details:

Only pharmacy staff responsible for vaccine formulation were unblinded. The randomisation codes were kept locked in the pharmacy and only unblinded staff had access to them.

The placebo and active doses were identical in appearance, thus there was no need for masking the contents of the syringe.

Arms

Are arms mutually exclusive?	Yes
Arm title	Adjuvanted Placebo

Arm description:

Received two doses of adjuvanted placebo 21 days apart and 21 days after the last vaccination were inoculated with influenza.

Arm type	Placebo
Investigational medicinal product name	Adjuvanted placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Emulsion for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

0.5ml of water in oil emulsion composed of 0.25ml of Montanide ISA-51 adjuvant (Seppic, France) and 0.25ml of water for injection.

Arm title	1x adjuvanted FLU-v
------------------	---------------------

Arm description:

Subjects received one dose of adjuvanted FLU-v and 21 days later a dose of adjuvanted placebo, followed by intranasal influenza inoculation 21 days after that.

Arm type	Experimental
Investigational medicinal product name	Adjuvanted placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Emulsion for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

0.5ml of water in oil emulsion composed of 0.25ml of Montanide ISA-51 adjuvant (Seppic, France) and 0.25ml of water for injection.

Investigational medicinal product name	Adjuvanted FLU-v
Investigational medicinal product code	
Other name	

Pharmaceutical forms	Emulsion for injection
Routes of administration	Subcutaneous use
Dosage and administration details:	
500 micrograms of FLU-v reconstituted in 0.25ml of Montanide ISA-51 adjuvant (Seppic, France) and emulsified with 0.25ml of water for injection.	
Arm title	2x Adjuvanted FLU-v
Arm description:	
Subjects received two doses of adjuvanted FLU-v 21 days apart, and 21 days after the last dose were intranasally inoculated with influenza.	
Arm type	Experimental
Investigational medicinal product name	Adjuvanted placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Emulsion for injection
Routes of administration	Subcutaneous use
Dosage and administration details:	
0.5ml of water in oil emulsion composed of 0.25ml of Montanide ISA-51 adjuvant (Seppic, France) and 0.25ml of water for injection.	
Investigational medicinal product name	Adjuvanted FLU-v
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Emulsion for injection
Routes of administration	Subcutaneous use
Dosage and administration details:	
500 micrograms of FLU-v reconstituted in 0.25ml of Montanide ISA-51 adjuvant (Seppic, France) and emulsified with 0.25ml of water for injection.	

Number of subjects in period 1	Adjuvanted Placebo	1x adjuvanted FLU-v	2x Adjuvanted FLU-v

End points

End points reporting groups

Reporting group title	Adjuvanted Placebo
Reporting group description: Received two doses of adjuvanted placebo 21 days apart and 21 days after the last vaccination were inoculated with influenza.	
Reporting group title	1x adjuvanted FLU-v
Reporting group description: Subjects received one dose of adjuvanted FLU-v and 21 days later a dose of adjuvanted placebo, followed by intranasal influenza inoculation 21 days after that.	
Reporting group title	2x Adjuvanted FLU-v
Reporting group description: Subjects received two doses of adjuvanted FLU-v 21 days apart, and 21 days after the last dose were intranasally inoculated with influenza.	
Subject analysis set title	Placebo Efficacy analysis
Subject analysis set type	Intention-to-treat
Subject analysis set description: ITT includes those participants in the adjuvanted placebo group who received both vaccination and challenge with an influenza virus.	
Subject analysis set title	1xFLU-v Efficacy analysis
Subject analysis set type	Intention-to-treat
Subject analysis set description: Includes all subjects in the 1 dose adjuvanted FLU-v group who completed the vaccinations and were challenge with influenza.	
Subject analysis set title	2xFLU-v efficacy analysis
Subject analysis set type	Intention-to-treat
Subject analysis set description: Includes all subjects in the 2 dose adjuvanted FLU-v who completed all vaccinations and were challenged with influenza.	

Primary: Incidence of MMID

End point title	Incidence of MMID
End point description: To determine the effect of FLU-v on reducing the incidence of Mild to Moderate Influenza Disease (MMID) defined as detectable viral shedding plus at least one symptom of influenza. This analysis was done in the ITT population which included all subjects that completed vaccination and inoculation milestones.	
End point type	Primary
End point timeframe: From 24h post-viral inoculation (Day 1) until the end of the quarantine phase on Day 7	

End point values	Placebo Efficacy analysis	1xFLU-v Efficacy analysis	2xFLU-v efficacy analysis	
Subject group type	Subject analysis set	Subject analysis set	Subject analysis set	
Number of subjects analysed	42	40	41	
Units: Number of subjects				
Positive for MMID	23	13	15	

Negative for MMID	19	27	26	
-------------------	----	----	----	--

Statistical analyses

Statistical analysis title	1xFLU-v vs Placebo: incidence MMID
Statistical analysis description: One-sided Fisher exact test is used to test if vaccine group has lower MMID rate.	
Comparison groups	Placebo Efficacy analysis v 1xFLU-v Efficacy analysis
Number of subjects included in analysis	82
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.0349 ^[1]
Method	Fisher exact

Notes:

[1] - P-value<0.05 was considered significant, therefore the difference in the incidence of MMID in the 1xFLU-v group compared to placebo is significant.

Statistical analysis title	2xFLU-v vs Placebo: Incidence of MMID
Statistical analysis description: One-sided Fisher exact test is used to test if vaccine group has lower MMID rate.	
Comparison groups	Placebo Efficacy analysis v 2xFLU-v efficacy analysis
Number of subjects included in analysis	83
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.0745 ^[2]
Method	Fisher exact

Notes:

[2] - P-value<0.05 was considered significant. The p-value obtained shows that difference in incidence of MMID between the 2xFLU-v and Placebo is not quite significant.

Primary: Incidence of Treatment Emergent AEs

End point title	Incidence of Treatment Emergent AEs
End point description: To determine the safety and tolerability of FLU-v by means of recording the incidence of TEAEs.	
End point type	Primary
End point timeframe: From the first administration of treatment to the end of the study.	

End point values	Adjuvanted Placebo	1x adjuvanted FLU-v	2x Adjuvanted FLU-v	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	50	52	51	
Units: number of TEAEs				
arithmetic mean (standard error)				
Overall	1.86 (± 0.26)	1.38 (± 0.24)	2.35 (± 0.27)	

Pre-inoculation	1.00 (\pm 0.21)	0.81 (\pm 0.13)	1.51 (\pm 0.19)	
Post-inoculation	0.86 (\pm 0.16)	0.58 (\pm 0.15)	0.84 (\pm 0.16)	

Statistical analyses

Statistical analysis title	Comparison of TEAEs pre-inoculation
-----------------------------------	-------------------------------------

Statistical analysis description:

One sided Fisher's exact test is used to test if AE rates of vaccine group is higher than the placebo group.

Comparison groups	Adjuvanted Placebo v 1x adjuvanted FLU-v
Number of subjects included in analysis	102
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.6474 ^[3]
Method	Fisher exact

Notes:

[3] - The difference in pre-inoculation TEAEs is not significant.

Statistical analysis title	Comparison of TEAEs pre-inoculation
-----------------------------------	-------------------------------------

Statistical analysis description:

One sided Fisher's exact test is used to test if AE rates of vaccine group is higher than the placebo group.

Comparison groups	Adjuvanted Placebo v 2x Adjuvanted FLU-v
Number of subjects included in analysis	101
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.9995 ^[4]
Method	Fisher exact

Notes:

[4] - The difference in pre-inoculation TEAEs is not significant.

Statistical analysis title	Comparison of TEAEs post-inoculation
-----------------------------------	--------------------------------------

Statistical analysis description:

One sided Fisher's exact test is used to test if AE rates of vaccine group is higher than the placebo group.

Comparison groups	Adjuvanted Placebo v 1x adjuvanted FLU-v
Number of subjects included in analysis	102
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.024 ^[5]
Method	Fisher exact

Notes:

[5] - The lower rate of post-inoculation TEAEs in the 1xFLU-v group compared to placebo is significant.

Statistical analysis title	Comparison of TEAEs post-inoculation
-----------------------------------	--------------------------------------

Statistical analysis description:

One sided Fisher's exact test is used to test if AE rates of vaccine group is higher than the placebo group.

Comparison groups	Adjuvanted Placebo v 2x Adjuvanted FLU-v
Number of subjects included in analysis	101
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.186 ^[6]
Method	Fisher exact

Notes:

[6] - The difference in post-inoculation TEAEs in the 2xFLU-v group compared to placebo is not significant.

Primary: TEAEs relatedness and severity

End point title	TEAEs relatedness and severity ^[7]
-----------------	---

End point description:

Number of subjects with one or more AE are reported by severity and relatedness to vaccine or challenge virus inoculation.

End point type	Primary
----------------	---------

End point timeframe:

From the day the first treatment was administered until the end of the study.

Notes:

[7] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analysis were performed only summary numeration of the TEAEs in the different categories of relatedness and severity.

End point values	Adjuvanted Placebo	1x adjuvanted FLU-v	2x Adjuvanted FLU-v	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	50	52	51

Analysis specification	Pre-specified
------------------------	---------------

Analysis type	other
---------------	-------

P-value	= 0.4808 ^[19]
---------	--------------------------

Method	Wilcoxon (Mann-Whitney)
--------	-------------------------

Notes:

[19] - Differences were considered significant if $p\text{-value} < 0.05$. The difference in this analysis is not significant.

Secondary: Peak viral shedding

End point title	Peak viral shedding
-----------------	---------------------

End point description:

The highest RT-qPCR (log₁₀ copy number/ml) recorded for each subject under quarantine.

End point type	Secondary
----------------	-----------

End point timeframe:

Starting from evening of Day 1 post-inoculation up to Day 7.

End point values	Placebo Efficacy analysis	1xFLU-v Efficacy analysis	2xFLU-v efficacy analysis	
Subject group type	Subject analysis set	Subject analysis set	Subject analysis set	
Number of subjects analysed	42	40	41	
Units: log ₁₀ copy number/ml				
arithmetic mean (standard error)	2.24 (± 0.40)	1.54 (± 0.39)	2.28 (± 0.42)	

Statistical analyses

Statistical analysis title	Peak viral shedding
----------------------------	---------------------

Statistical analysis description:

One-sided Wilcoxon test is used to test if vaccine group has lower peak viral shedding than the placebo.

Comparison groups	Placebo Efficacy analysis v 1xFLU-v Efficacy analysis

Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	19.1
--------------------	------

Reporting groups

Reporting group title	Adjuvanted Placebo
-----------------------	--------------------

Reporting group description:

Received two doses of adjuvanted placebo 21 days apart and 21 days after the last vaccination were inoculated with influenza.

Reporting group title	1x adjuvanted FLU-v
-----------------------	---------------------

Reporting group description:

Subjects received one dose of adjuvanted FLU-v and 21 days later a dose of adjuvanted placebo, followed by intranasal influenza inoculation 21 days after that.

Reporting group title	2x Adjuvanted FLU-v
-----------------------	---------------------

Reporting group description:

Subjects received two doses of adjuvanted FLU-v 21 days apart, and 21 days after the last dose were intranasally inoculated with influenza.

Serious adverse events	Adjuvanted Placebo	1x adjuvanted FLU-v	2x Adjuvanted FLU-v
Total subjects affected by serious adverse events			
subjects affected / exposed	0 / 50 (0.00%)	0 / 52 (0.00%)	0 / 51 (0.00%)
number of deaths (all causes)	0	0	0
number of deaths resulting from adverse events	0	0	0

Frequency threshold for reporting non-serious adverse events: 4 %

Non-serious adverse events	Adjuvanted Placebo	1x adjuvanted FLU-v	2x Adjuvanted FLU-v
Total subjects affected by non-serious adverse events			
subjects affected / exposed	40 / 50 (80.00%)	33 / 52 (63.46%)	45 / 51 (88.24%)
Investigations			
Alanine aminotransferase increased			
subjects affected / exposed	3 / 50 (6.00%)	0 / 52 (0.00%)	2 / 51 (3.92%)
occurrences (all)	3	0	2
Aspartate aminotransferase increased			

subjects affected / exposed occurrences (all)	3 / 50 (6.00%) 3	0 / 52 (0.00%) 0	2 / 51 (3.92%) 2
Neutrophil count decreased subjects affected / exposed occurrences (all)	2 / 50 (4.00%) 2	0 / 52 (0.00%) 0	0 / 51 (0.00%) 0
Nervous system disorders			
Dizziness subjects affected / exposed occurrences (all)	4 / 50 (8.00%) 4	2 / 52 (3.85%) 2	2 / 51 (3.92%) 2
Headache subjects affected / exposed occurrences (all)	11 / 50 (22.00%) 11	5 / 52 (9.62%) 5	13 / 51 (25.49%) 13
Blood and lymphatic system disorders			
Neutropenia subjects affected / exposed occurrences (all)	0 / 50 (0.00%) 0	0 / 52 (0.00%) 0	3 / 51 (5.88%) 3
General disorders and administration site conditions			
Injection site induration subjects affected / exposed occurrences (all)	9 / 50 (18.00%) 9	24 / 52 (46.15%) 24	31 / 51 (60.78%) 31

Infections and infestations Gastroenteritis subjects affected / exposed occurrences (all) Nasopharyngitis subjects affected / exposed occurrences (all) Oral herpes alternative assessment type: Non-systematic subjects affected / exposed occurrences (all) Upper respiratory tract infection subjects affected / exposed occurrences (all) Laceration alternative assessment type: Non-systematic subjects affected / exposed occurrences (all)	0 / 50 (0.00%) 0 6 / 50 (12.00%) 6 1 / 50 (2.00%) 1 14 / 50 (28.00%) 14 2 / 50 (4.00%) 2	0 / 52 (0.00%) 0 0 / 52 (0.00%) 0 1 / 52 (1.92%) 1 9 / 52 (17.31%) 9 0 / 52 (0.00%) 0	3 / 51 (5.88%) 3 3 / 51 (5.88%) 3 3 / 51 (5.88%) 3 8 / 51 (15.69%) 8 0 / 51 (0.00%) 0

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 September 2016	Section 7.2; Inclusion Criteria 9: Clarification to participant asthma history prior to entry into study. Section 7.2; Inclusion Criteria 11: Clarification on the time-point for acquiring a subject's medical history from their GP. Section 18.7.1; Informed consent procedure: Amended to include Investigator or delegate to conduct participant consenting. Section 18.7.3; Information for General Practitioners: Amendment to the requirement for participant's medical history from their GP.
18 April 2017	Pages 1, 6 and 12 updated to reflect change in PI. Section 6.3.1 and throughout updated to reflect exploratory endpoints may be reported separately from CSR. Section 9.3.1 correction for consistency that subjects will be admitted to the Quarantine unit with a minimum 20 days not 21 days post second vaccination. Section 9.3.1 and throughout a clarification that serology test and result must be available within 90 days of Day 0 inoculation Section 13.1.2 inspection of the eyes removed from mandatory list in directed physical examination. Section 13.2.2 language inserted to state how missing Flu-PRO data will be handled.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
