Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 October 2019
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	28 October 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The safety profile of blinatumomab after frontline R-chemotherapy, consisting of either R-CHOP (14 or 21) or R-DA-EPOCH or R-CHOEP, will be determined.

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) regulations and guidelines, and Food and Drug Administration (FDA) regulations, and guidelines set forth in 21 CFR Parts 11, 50, 54, 56, and 312. All subjects provided written informed consent before undergoing any study-related procedures, including screening procedures. The study protocol, amendments, and the informed consent form (ICF) were reviewed by the Institutional Review Boards (IRBs) and Independent Ethics Committees (IECs). No subjects were recruited into the study and no investigational product (IP) was shipped until the IRB/IEC gave written approval of the protocol and ICF and Amgen received copies of these approvals.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 March 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

EEA total number of subjects	23

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	26
From 65 to 84 years	21
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study was conducted at 12 centers in the European Union (France, Germany, Spain, and the United Kingdom), the United States, and Canada. Of the 54 subjects screened, 47 subjects were enrolled.

Pre-assignment

Screening details:

The study consisted of a standard of care rituximab-chemotherapy run-in period of approximately 21 weeks, a 12- to 16-week blinatumomab treatment period, a 30-day safety follow-up, and a long-term follow-up period up to 1 year from the first dose of blinatumomab, or until participant death, whichever occurred first.

Pre-assignment period milestones

Number of subjects started	47
Number of subjects completed	28

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Protocol-specified criteria: 13
Reason: Number of subjects	Adverse event, serious fatal: 1
Reason: Number of subjects	Consent withdrawn by subject: 5

Period 1

Period 1 title	Treatment Period (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Blinatumomab
-----------	--------------

Arm description:

Blinatumomab was administered as a continuous intravenous (IV) infusion. Cycle 1 was 12 weeks (84 days) in duration with step dosing of 9 µg/day for 7 days, 28 µg/day for 7 days, 112 µg/day for 6 weeks, followed by a 4-week treatment free time.

An optional 4-week Cycle 2 of blinatumomab was available for participants whose disease did not progress, with step dosing of 9 µg/day for 7 days, 28 µg/day for 7 days, and 112 µg/day for 14 days. There was a safety follow-up for 30 days. And a long-term follow-up of up to 8 months for a maximum of 1 year from first dose of blinatumomab or until participant death.

Arm type	Experimental
Investigational medicinal product name	Blinatumomab
Investigational medicinal product code	
Other name	AMG103 BlinCyto
Pharmaceutical forms	Powder for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Blinatumomab monotherapy was supplied in single-use sterile glass injection vials and administered as an IV infusion.

Investigational medicinal product name	Dexamethasone
Investigational medicinal product code	
Other name	corticosteroid
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

20 mg intravenous within 1 hour prior to start of treatment in each treatment cycle, and within 1 hour prior to dose-step (increase).

Number of subjects in period 1^[1]	Blinatumomab
Started	28
Started Cycle 1	28
Started Cycle 2	11 ^[2]
Completed	25
Not completed	3
Consent withdrawn by subject	1
Adverse event, non-fatal	1
Disease Progression	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The number of subject reported in the baseline period reflects the number of participants who completed the run-in period and who started the blinatumomab treatment period.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Participants received Cycle 2 treatment at the Investigator's discretion.

Statistical analyses

No statistical analyses for this end point

Secondary: Overall Objective Response Rate (ORR) Expressed as the Percentage of Participants Achieving Complete Metabolic Response (CMR) and Partial Metabolic Response (PMR) Using Lugano 2014 Criteria During Cycle 1 and During Treatment Period

End point title	Overall Objective Response Rate (ORR) Expressed as the Percentage of Participants Achieving Complete Metabolic
-----------------	--

End point description:

Tumor response assessment was performed by a central reader according to modified Lugano classification using PET/CT scan. Overall objective response rate (ORR) is the percentage of participants with a best overall response of complete metabolic response (CMR) or partial metabolic response (PMR). CMR: a score of 1 (no uptake above background), 2 (uptake \leq mediastinum), or 3 (uptake $<$ mediastinum but \leq liver) with/without a residual mass on PET 5-PS, for lymph nodes and extralymphatic sites; no new lesions; no evidence of fluorodeoxyglucose (FDG)-avid disease in bone marrow; and normal/IHC-negative bone marrow morphology. PMR: a score 4 (uptake moderately greater than $>$ liver) or 5 (uptake markedly $>$ liver and/or new lesions) with reduced uptake compared with baseline and residual mass(es) of any size on PET 5-PS for lymph nodes and extralymphatic sites; no new lesions; and reduced residual uptake in bone marrow compared with baseline.

End point type Secondary

End point timeframe:

Cycle 1: Day 78 (3 weeks following end of Cycle 1 IP treatment) Treatment Period: Either the Cycle 1 timeframe or approximately Day 128 (3 weeks after Cycle 2 ended) for participants who completed Cycle 2

End point values	Blinatumomab			
Subject group type	Reporting group			
Number of subjects analysed	28			
Units: percentage of participants				
number (confidence interval 95%)				
Cycle 1	89.3 (71.8 to 97.7)			
Entire Treatment Period	92.9 (76.5 to 99.1)			

Statistical analyses

No statistical analyses for this end point

Secondary: Kaplan-Meier Estimates for Duration of Response (DOR)

End point title Kaplan-Meier Estimates for Duration of Response (DOR)

End point description:

DOR was calculated only for responders during cycle 1. For participants who had CR or PR on the PET/CT scan at the end of the run-in period, response was measured from the start of blinatumomab treatment. For participants who had SD at the end of the run-in period, duration was calculated from documentation of the first assessment of either PR or CR on blinatumomab.

Progression was defined as the first diagnosis of progressive metabolic response/progressive disease based on PET/CT scan per central or investigator review during the treatment period or relapse based on clinical tumor assessment during the long-term follow up. Duration was calculated until the start of new anti-tumor treatment (excluding any stem cell transplantation), PD, or death, whichever was the earliest event. Participants who did not have new anti-tumor treatment (excluding stem cell transplantation), PD, or death were censored at the last tumor assessment date.

9999=not estimable due to low number of events

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From first dose of blinatumomab to 30 days after last dose; median duration of treatment was 56 days. Serious adverse events related to blinatumomab and deaths were collected during the long-term follow-up period, median time on follow-up was 12 months.

Adverse event reporting additional description:

Adverse events are reported for all participants who received at least one dose of blinatumomab in the Treatment Period. One participant died during the run-in period and is not reflected in the tables below.

Dizziness subjects affected / exposed occurrences (all)	2 / 28 (7.14%) 3		
Headache subjects affected / exposed occurrences (all)	7 / 28 (25.00%) 9		
Paraesthesia subjects affected / exposed occurrences (all)	2 / 28 (7.14%) 2		
Tremor subjects affected / exposed occurrences (all)	10 / 28 (35.71%) 13		
Blood and lymphatic system disorders			
Anaemia subjects affected / exposed occurrences (all)	2 / 28 (7.14%) 4		
Neutropenia subjects affected / exposed occurrences (all)	2 / 28 (7.14%) 8		
Gastrointestinal disorders			

Constipation subjects affected / exposed occurrences (all)	2 / 28 (7.14%) 2		
Diarrhoea subjects affected / exposed occurrences (all)	4 / 28 (14.29%) 6		
Dry mouth subjects affected / exposed occurrences (all)	3 / 28 (10.71%) 3		
Nausea subjects affected / exposed occurrences (all)	5 / 28 (17.86%) 7		
Vomiting subjects affected / exposed occurrences (all)	3 / 28 (10.71%) 3		
Skin and subcutaneous tissue disorders Erythema subjects affected / exposed occurrences (all)	2 / 28 (7.14%) 2		
Pruritus subjects affected / exposed occurrences (all)	3 / 28 (10.71%) 5		
Rash subjects affected / exposed occurrences (all)	2 / 28 (7.14%) 3		
Musculoskeletal and connective tissue disorders Arthralgia subjects affected / exposed occurrences (all)	5 / 28 (17.86%) 5		
Back pain subjects affected / exposed occurrences (all)	5 / 28 (17.86%) 7		
Flank pain subjects affected / exposed occurrences (all)	2 / 28 (7.14%) 3		
Muscular weakness			

subjects affected / exposed	2 / 28 (7.14%)		
occurrences (all)	3		
Musculoskeletal pain			
subjects affected / exposed	3 / 28 (10.71%)		
occurrences (all)	3		
Myalgia			
subjects affected / exposed	4 / 28 (14.29%)		
occurrences (all)	4		
Neck pain			
subjects affected / exposed	3 / 28 (10.71%)		
occurrences (all)	3		
Pain in extremity			
subjects affected / exposed	5 / 28 (17.86%)		
occurrences (all)	9		
Infections and infestations			
Upper respiratory tract infection			
subjects affected / exposed	2 / 28 (7.14%)		
occurrences (all)	2		
Metabolism and nutrition disorders			
Hypophosphataemia			
subjects affected / exposed	2 / 28 (7.14%)		
occurrences (all)	5		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 February 2017	This amendment was not submitted to the regulatory agency.
11 May 2017	<p>This amendment reflects changes made to the original protocol in Amendments 1 and 2.</p> <p>The protocol was aligned to changes made in the other diffuse large B-cell lymphoma protocols (Studies 20150292 and 20140286) with respect to safety assessments and dose interruptions and stopping criteria.</p> <p>Sample size was reduced to support consideration of the study as a pilot study.</p> <p>The following points were clarified:</p> <ul style="list-style-type: none">-Run-in period treatment-Timing and frequency for evaluation of tumor response-Subjects with progressive disease are not eligible for treatment with blinatumomab-Toxicity monitoring and management and permanent discontinuation criteria-All grades 3 and 4 laboratory abnormalities were to be recorded as adverse events <p>The Schedule of Assessments was updated to clarify for procedures during the screening and run-in phase and to provide clear guidance for cycle 1 and cycle 2 periods.</p> <p>The list of disease-related events was updated.</p> <p>The assessment of blinatumomab pharmacokinetics was changed from an exploratory objective and endpoint to a secondary objective and endpoint.</p> <p>The assessment of overall survival was added in the clinical hypothesis and as a secondary endpoint.</p> <p>Typographical and formatting changes were made throughout the protocol.</p>
03 June 2018	<p>The following points were clarified:</p> <ul style="list-style-type: none">-Grade 4 hematologic toxicity and grade 4 laboratory abnormalities lasting ≥ 7 days exclude lymphopenia-Subjects would be excluded from receiving blinatumomab if there was evidence of central nervous system involvement with diffuse large B-cell lymphoma at evaluation before starting blinatumomab-When vital signs would be obtained for hospitalized subjects versus subjects in the outpatient clinic-What assessments in the Schedule of Assessments should be obtained after restart of continuous intravenous infusion of blinatumomab after interruption requiring dose modification. <p>Administration, typographical, and formatting changes were made throughout the protocol.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
