

Clinical trial results:

Efficacy, safety and tolerability of a bowel cleansing preparation (Eziclen®/Izinova®) in paediatric subjects undergoing colonoscopy: a Phase III, multicentre, randomised, comparative study versus Klean-Prep® (PEG-Electrolytes), administered on the day before colonoscopy, investigator-blinded, non-inferiority in adolescents of 12 to 17 years of age (inclusive) >40 kg

Analysis stage	Final
Date of interim/final analysis	29 June 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	29 June 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To demonstrate that Eziclen®/Izinova®, an osmotic sulphate-based laxative preparation given on the day before colonoscopy has non-inferior efficacy to Klean-Prep® (polyethylene glycol [PEG]-electrolytes) on colon cleansing in adolescents aged 12 to 17 years (inclusive) with a body weight > 40 kilograms (kg), scheduled to undergo a colonoscopy for a routinely accepted diagnostic indication.

Protection of trial subjects:

The study was conducted under the provisions of the Declaration of Helsinki, in accordance with the International Conference on Harmonisation Consolidated Guideline on Good Clinical Practice, and in compliance with Independent Ethics Committee and informed consent regulations, and adhered to all local regulatory requirements. Written informed consent was obtained from the subject's parent(s)/legal representative(s) and as a signed assent from the adolescent prior to the subject entering the study.

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	250
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study was conducted in adolescents who were undergoing a colonoscopy for a routinely accepted indication. Subjects were randomised 1:1 to Eziclen®/Izinova® (¾ of adult dose; 750 millilitres [mL] of preparation plus 1500 mL of water) or Klean-Prep® (70 mL/kg; maximum of 4000 mL). Subjects were randomised at 22 study centres in 6 countries.

Pre-assignment

Screening details:

The study consisted of a 1-day enrolment (Day 1, baseline) and investigator-blind label dosing period, a colonoscopy (Day 2) and a 30-day follow-up period (Day 32 [-5/+15, i.e. Day 27 to Day 47]). Subjects were expected to participate in the study for a minimum of 27 days and up to 47 days.

Period 1

Period 1 title	Randomisation Through Start of Treatment
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Investigator ^[1]

Arms

Are arms mutually exclusive?	Yes
Arm title	Eziclen®/Izinova®

Arm description:

Subjects randomised to the Eziclen®/Izinova® treatment group.

Arm type	Experimental
Investigational medicinal product name	Eziclen®/Izinova®
Investigational medicinal product code	
Other name	Eziclen®, Izinova®
Pharmaceutical forms	Concentrate for oral solution
Routes of administration	Oral use

Dosage and administration details:

Period is prior to the start of treatment; no study drug administered.

Arm title	Klean-Prep®
------------------	-------------

Arm description:

Subjects randomised to the Klean-Prep® treatment group.

Arm type	Active comparator
Investigational medicinal product name	Klean-Prep®
Investigational medicinal product code	
Other name	Macrogol 3350 plus electrolytes
Pharmaceutical forms	Powder for oral solution
Routes of administration	Oral use

Dosage and administration details:

Period is prior to the start of treatment; no study drug administered.

Notes:

[1] - The roles blinded appear inconsistent with a simple blinded trial.

Justification: This was a single-blinded study in which the investigator (i.e. colonoscopist) was blinded to ensure an unbiased evaluation of the study preparations.

Number of subjects in period 1	Eziclen®/Izinova®	Klean-Prep®
Started	126	124
Completed	125	116
Not completed	1	8
Consent withdrawn by subject	1	4
Adverse event, non-fatal	-	1
Study drug not dispensed	-	1
Protocol deviation	-	2

Period 2

Period 2 title	Treatment Through End of Study
Is this the baseline period?	Yes ^[2]
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Investigator ^[3]

Blinding implementation details:

In this single-blinded (investigator-blinded) study, to ensure an unbiased evaluation of the study preparations, the colonoscopist was not allowed to perform any study treatment-related activities (drug dispensing, return and accountability, acceptability, tolerability, and review of subject's leaflet/questionnaires). Subjects and caregivers/nurses did not discuss their study preparation with the colonoscopist or any staff member other than with the study nurse who collected the questionnaires.

Arms

Are arms mutually exclusive?	Yes
Arm title	Eziclen®/Izinova®

Arm description:

Subjects received Eziclen®/Izinova® oral sulphate salt solution, administered as $\frac{3}{4}$ of the adult dose, as a 1-day regimen on the evening of the day before colonoscopy (Day 1). The 750 mL preparation was administered in 2 half doses as follows: the first half of preparation (375 mL) was drunk slowly in 30 minutes to 1 hour, followed by 750 mL of water over the next hour. Approximately 2 hours after starting the first half of preparation, the second half (375 mL) was drunk slowly in 30 minutes to 1 hour, followed by 750 mL of water over the next hour. Overall total volume (preparation + water) was 2250 mL (1125 mL per dose).

Arm type	Experimental
Investigational medicinal product name	Eziclen®/Izinova®
Investigational medicinal product code	
Other name	Eziclen®, Izinova®
Pharmaceutical forms	Concentrate for oral solution
Routes of administration	Oral use

Dosage and administration details:

Eziclen®/Izinova® is a concentrate for oral solution packaged in 2 bottles, each containing: sodium sulphate anhydrous: 17.510 grams (g), magnesium sulphate heptahydrate: 3.276 g and potassium sulphate: 3.130 g. The 2 bottles were diluted up to 1000 mL with water and 250 mL were discarded, with the remaining 750 mL preparation being given on the evening of the day before colonoscopy.

Arm title	Klean-Prep®
------------------	-------------

Arm description:

Subjects received Klean-Prep® oral solution, administered as a 70 mL/kg dose (calculated based on subject's weight) as a 1-day regimen on the evening of the day before colonoscopy (Day 1). The whole

solution was administered in 2 half doses (1 litre per hour), with a 1-hour pause between the 2 half doses. Approximately 2 hours after starting the first half of preparation, the second half was drunk. The maximum global volume administered was 4000 mL (2000 mL per dose).

Arm type	Active comparator
Investigational medicinal product name	Klean-Prep®
Investigational medicinal product code	
Other name	Macrogol 3350 plus electrolytes
Pharmaceutical forms	Powder for oral solution
Routes of administration	Oral use

Dosage and administration details:

Each sachet of Klean-prep® contains the following active ingredients: macrogol 3350: 59.000 g, anhydrous sodium sulphate: 5.685 g, sodium bicarbonate: 1.685 g, sodium chloride: 1.465 g, potassium chloride: 0.7425 g. Each treatment pack was composed of 4 sachets with a total of 69 g of the product included in each sachet. Each sachet was diluted in 1000 mL of water and dosage was 70 mL/kg (calculated based on subject's weight). Klean-Prep® was given on the evening of the day before colonoscopy.

Notes:

[2] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: Period 1 presents data for all subjects randomised until the start of treatment and Period 2 presents data for all subjects who received study drug. Baseline characteristics are based on subjects who were randomised and who received even a partial dose of study drug; Period 2 is therefore the baseline period.

[3] - The roles blinded appear inconsistent with a simple blinded trial.

Justification: This was a single-blinded study in which the investigator (i.e. colonoscopist) was blinded to ensure an unbiased evaluation of the study preparations.

Number of subjects in period 2^[4]	Eziclen®/Izinova®	Klean-Prep®
Started	125	116
Completed	119	110
Not completed	6	6
Consent withdrawn by subject	4	2
End of study visit outside permitted time window	-	1
Lost to follow-up	1	3
COVID-19 pandemic - consent withdrawn	1	-

Notes:

[4] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Baseline characteristics are based on subjects who were randomised and who received even a partial dose of study drug.

Primary: Percentage of Subjects With Successful Overall Colon Preparation, Assessed With the Cleansing Score (4-point Scale)

End point title	Percentage of Subjects With Successful Overall Colon Preparation, Assessed With the Cleansing Score (4-point Scale)
-----------------	---

End point description:

Blinded overall assessment of preparation efficacy (Cleansing Score) was determined by the colonoscopist upon completion of the examination, based on a 4-point scale as follows:

- 4 (Excellent) = No more than small bits of adherent faeces/fluid
- 3 (Good) = Small amounts of faeces or fluid not interfering with examination
- 2 (Fair) = Enough faeces or fluid to prevent a completely reliable examination
- 1 (Poor) = Large amounts of faecal residue, additional cleansing required.

Only perfect preparations graded as excellent (4) or good (3), which allowed full, reliable examination of the mucosa were considered as successful. The adjusted percentage of subjects with a successful preparation was determined using a logistic regression model, including treatment and country as covariates.

The modified intention-to-treat population included all randomised subjects who received even a partial dose of study drug and produced a primary efficacy assessment.

End point type	Primary

number (confidence interval 95%)	71.42 (56.33 to 82.89)	79.03 (65.34 to 88.28)		

Statistical analyses

Statistical analysis title	Adjusted treatment difference
Statistical analysis description:	
	Analysis of the treatment difference (Eziclen®/Izinova® minus Klean-Prep®) was performed using a logistic regression model, including treatment and country as covariates.
Comparison groups	Eziclen®/Izinova® v Klean-Prep®
Number of subjects included in analysis	241
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[1]
P-value	= 0.0907 ^[2]
Method	Regression, Logistic
Parameter estimate	Adjusted treatment difference
Point estimate	-7.61
Confidence interval	
level	95 %
sides	2-sided
lower limit	-18.45
upper limit	3.24

Notes:

[1] - Non-inferiority would be demonstrated if the lower limit of the 95% confidence interval of the adjusted treatment difference was higher than -15%.

[2] - P-value for non-inferiority was estimated from the adjusted treatment difference.

Secondary: Mean Colon Cleansing Score (4-point Scale)

End point title	Mean Colon Cleansing Score (4-point Scale)
-----------------	--

End point description:

The Cleansing Score was determined by the blinded colonoscopist, based on a 4-point scale as follows:

- 4 (Excellent) = No more than small bits of adherent faeces/fluid
- 3 (Good) = Small amounts of faeces or fluid not interfering with examination
- 2 (Fair) = Enough faeces or fluid to prevent a completely reliable examination
- 1 (Poor) = Large amounts of faecal residue, additional cleansing required.

The adjusted mean score was estimated using a 2-way analysis of variance (ANOVA), including treatment and country as covariates.

The intention-to-treat (ITT) population included all randomised subjects who received even a partial dose of study drug.

Secondary: Mean Boston Bowel Preparation Scale (BBPS) Global Score and BBPS Scores by Colon Segment

End point title	Mean Boston Bowel Preparation Scale (BBPS) Global Score and BBPS Scores by Colon Segment
-----------------	--

End point description:

The BBPS score for each colon segment (left, transverse, right) was determined by the blinded colonoscopist as follows:

- 0 = Unprepared colon segment with mucosa not seen due to solid stool that cannot be cleared
- 1 = Portion of mucosa of the segment seen, but other areas of the colon segment not well seen due to staining, residual stool and/or opaque liquid
- 2 = Minor amount of residual staining, small fragments of stool and/or opaque liquid, but mucosa of segment seen well
- 3 = Entire mucosa of segment seen well with no residual staining, small fragments of stool and/or opaque liquid.

Each segment score ranged from 0-3. Global score was sum of the 3 segment scores and ranged from 0-9 (worst to best). Successful colon cleansing was defined as a global BBPS score ≥ 6 . The adjusted

mean score was estimated using a 2-way ANOVA, including treatment and country as covariates. The ITT population included all randomised subjects who received even a partial dose of study drug.

Secondary: Median Time to Caecal Intubation

End point title	Median Time to Caecal Intubation
End point description: The time to caecal intubation was defined as the time from colonoscope introduction to caecal intubation, estimated using the Kaplan-Meier product limit method. In the event the procedure did not reach the caecum, the subject was censored at time of withdrawal of colonoscope. The ITT population included all randomised subjects who received even a partial dose of study drug. Note: for 2 subjects in the Eziclen®/Izinova® group and 1 subject in the Klean-Prep® group, although the procedure reached the caecum, the time was not reported and consequently, these subjects could	

not be included in the analysis.

End point type	Secondary
End point timeframe:	
At Day 2 (colonoscopy visit)	

End point values	Eziclen®/Izinova®	Klean-Prep®

Secondary: Mean Duration of Examination

End point title	Mean Duration of Examination
End point description:	
The duration of examination for colonoscopy (in minutes) was measured by the difference between the time of caecum intubation and the time of withdrawal of the colonoscope. The adjusted mean duration of examination was estimated using a 2-way ANOVA, including treatment and country as covariates. Subjects for whom the caecum was not reached were excluded from the analysis. The ITT population included all randomised subjects who received even a partial dose of study drug.

Secondary: Mean Score for Overall Treatment Acceptability, Assessed Using Treatment Acceptability Questionnaire

End point title	Mean Score for Overall Treatment Acceptability, Assessed Using Treatment Acceptability Questionnaire
-----------------	--

End point description:

The Treatment Acceptability Questionnaire was completed by the caregiver or subject after the subject ended the intake of preparation. Subject acceptability was rated as follows:

- 1 = Very badly accepted/unacceptable
- 2 = Badly but accepted
- 3 = Neither good nor bad
- 4 = Well accepted
- 5 = Very well accepted.

Overall acceptability score is the average of scores from the 2 doses ranging from 1 - 5 (worst to best). The adjusted mean score was estimated using a 2-way ANOVA, including treatment and country as covariates.

The ITT population included all randomised subjects who received even a partial dose of study drug.

Secondary: Mean Overall Treatment Compliance

End point title	Mean Overall Treatment Compliance
End point description:	
Treatment compliance according the instructions of use provided in the prescription was assessed as the percentage of volume of fluid taken relative to the planned volume of fluid to be taken (measured by the caregiver and reported in the treatment questionnaire of subject's leaflet during treatment administration). Overall treatment compliance was derived from the total volumes of fluid (i.e. preparation + hydration for Eziclen®/Izinova® and preparation only for Klean-Prep®) and was assessed for dose 1, dose 2 and globally (accounting for both doses). The adjusted mean overall treatment compliance (%) was estimated using a 2-way ANOVA, including treatment and country as covariates. The ITT population included all randomised subjects who received even a partial dose of study drug.

Secondary: Mean Subject Tolerability Total Score, Assessed using a Symptom Scale

End point title	Mean Subject Tolerability Total Score, Assessed using a Symptom Scale
-----------------	---

End point description:

Tolerability was assessed using a Symptom Scale after each dose of treatment for stomach cramping, stomach bloating and nausea on a paediatric 5-point scale as follows:

- 1 = No symptom
- 2 = Mild
- 3 = Bothersome
- 4 = Distressing
- 5 = Severely distressing symptoms.

The total tolerability score is the sum of the scores for the 3 symptoms ranging from 3 to 15 (best to worst). Mean total tolerability scores after dose 1 and dose 2 are presented.

The safety population included all randomised subjects who received even a partial dose of study drug. Subjects were assessed according to the treatment received (1 subject randomised to the Eziclen®/Izinova® group was mistakenly administered Klean-Prep®; this subject was therefore included in the Klean-Prep® safety population).

Other pre-specified: Median Time to Clear Effluent

End point title	Median Time to Clear Effluent
-----------------	-------------------------------

End point description:

The time to clear effluent, as reported by the subject, was defined as the time between first intake of prescription and first clear watery stool, estimated using the Kaplan-Meier product limit method. In the event of no clear watery stools, subjects with colonoscopy were censored at the time of colonoscope introduction, and subjects without colonoscopy were censored at time of start of treatment + 12 hours. Although time to clear effluent was pre-specified as a secondary endpoint in the study protocol, in a change to the planned analysis, it was subsequently analysed and reported as an 'other' efficacy

endpoint.

The ITT population included all randomised subjects who received even a partial dose of study drug.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Treatment-emergent adverse events (TEAEs) were collected from Day 1 up to Day 32 (30 days [-5+/15] after colonoscopy).

Adverse event reporting additional description:

The safety population included all randomised subjects who received even a partial dose of study drug. Subjects were assessed according to the treatment received (1 subject randomised to the Eziclen®/Izinova® group was mistakenly administered Klean-Prep®; this subject was therefore included in the Klean-Prep® safety population).

Reporting groups

Reporting group title	Eziclen®/Izinova®
-----------------------	-------------------

Reporting group description:

Subjects received Eziclen®/Izinova® oral sulphate salt solution, administered as $\frac{3}{4}$ of the adult dose, as a 1-day regimen on the evening of the day before colonoscopy (Day 1). The 750 mL preparation was administered in 2 half doses as follows: the first half of preparation (375 mL) was drunk slowly in 30 minutes to 1 hour, followed by 750 mL of water over the next hour. Approximately 2 hours after starting the first half of preparation, the second half (375 mL) was drunk slowly in 30 minutes to 1 hour, followed by 750 mL of water over the next hour. Overall total volume (preparation + water) was 2250 mL (1125 mL per dose).

Reporting group title	Klean-Prep®
-----------------------	-------------

Reporting group description:

Subjects received Klean-Prep® oral solution, administered as a 70 mL/kg dose (calculated based on subject's weight) as a 1-day regimen on the evening of the day before colonoscopy (Day 1). The whole solution was administered in 2 half doses (1 litre per hour), with a 1-hour pause between the 2 half doses. Approximately 2 hours after starting the first half of preparation, the second half was drunk. The maximum global volume administered was 4000 mL (2000 mL per dose).
