

Clinical trial results:

A randomized, double-blind, placebo-controlled, study of oral treatment of piromelatine in patients with ocular hypertension (OHT) or primary open angle glaucoma (POAG).

Summary

EudraCT number	2016-002281-31
Trial protocol	ES
Global end of trial date	26 October 2017

Results information

Result version number	v1 (current)
This version publication date	22 July 2021
First version publication date	22 July 2021

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 January 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	26 October 2017
Global end of trial reached?	Yes
Global end of trial date	26 October 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the safety and tolerability of 30 days piromelatine treatment vs placebo in ocular hypertension (OHT) or primary open angle glaucoma (POAG) patients.

Protection of trial subjects:

This clinical trial was conducted in compliance with the current revision of the Declaration of Helsinki, ICH guideline for Good Clinical Practice (GCP) and current regulatory regulations (WMO).

The principles of informed consent were implemented according to the 2013 version of the Declaration of Helsinki, the ICH Guideline for Good Clinical Practice (GCP) and regulatory requirements (WMO).

Background therapy:

N.A.

Evidence for comparator:

A placebo group was required in order to differentiate any investigational drug effect from any improvement that could occur solely due to the close care and medical oversight given to the patients under trial conditions. The matching placebo tablets for piromelatine contained only the excipients and were indistinguishable from the piromelatine tablets.

Actual start date of recruitment	19 January 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 40
Worldwide total number of subjects	40
EEA total number of subjects	40

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	21
From 65 to 84 years	19
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Patients had to be clinically diagnosed with either POAG or OHT in both eyes and had to fulfill the following main criteria:

Aged between 40 and 80 years, of either sex.

Morning IOP: 22-30 mmHg (incl.)

not pregnant

Pre-assignment

Screening details:

Patients had to be clinically diagnosed with either POAG or OHT in both eyes and had to fulfill the following main criteria:

Aged between 40 and 80 years, of either sex.

Morning IOP: 22-30 mmHg (incl.)

No other glaucoma type, advanced visual field loss, ocular trauma, infection, pathology, progressive retinal disease

not pregnant, good health

Pre-assignment period milestones

Number of subjects started	40
Number of subjects completed	40

Period 1

Period 1 title	overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor

Arms

Are arms mutually exclusive?	Yes
Arm title	Piromelatine 20mg/40mg

Arm description:

During dosing period each patient received an oral daily dose of piromelatine 20 mg or matching placebo and after 2 weeks non responders (Patients with no improvement in their IOP measurement, defined as decrease of <15% of baseline or worsening within the inclusion criteria range) received 40 mg (2 tablets of 20 mg) or matching placebo (2 tablets).

Arm type	Experimental
Investigational medicinal product name	Piromelatine
Investigational medicinal product code	Neu-P11
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Buccal use

Dosage and administration details:

20 mg oral administration

Arm title	placebo
------------------	---------

Arm description:

Placebo - tablets similar in appearance to active

Arm type	Placebo
----------	---------

Investigational medicinal product name	Piromelatine

Primary: Primary endpoint: The safety parameters were summarized using descriptive statistics: n, mean, median, standard deviation (SD), standard error of the mean (SEM), minimum, maximum, number of out-of-range values if applicable.

End point title	Primary endpoint: The safety parameters were summarized using descriptive statistics: n, mean, median, standard deviation (SD), standard error of the mean (SEM), minimum, maximum, number of out-of-range values if applicable. ^[1]
End point description: ANCOVA for Diastolic Blood Pressure - Comparison of Placebo with Piromelatine 20mg and Placebo with Piromelatine 20mg/40mg ANCOVA for Systolic Blood Pressure - Comparison of Placebo with Piromelatine 20mg and Placebo with Piromelatine 20mg/40mg ANCOVA for Heart Rate - Comparison of Placebo with Piromelatine 20mg and Placebo with Piromelatine 20mg/40mg	
End point type	Primary
End point timeframe: Assessment of this endpoints were conducted at following visits: Visit 2 (Day 0), Visit 3 (Day 15 +/-2), Visit 3 (Day 30 +/-2)	
Notes:	

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: ANCOVA was performed for comparison of Placebo with Piromelatine 20mg and Placebo with Piromelatine 20mg/40mg. No data were evaluated for the Placebo treatment arm.

End point values	Piromelatine 20mg/40mg	Piromelatine 20 mg		
Subject group type	Reporting group	Reporting group

Analysis type	superiority
P-value	< 0.05
Method	ANCOVA

Secondary: IOP – Intraocular pressure at supine and sitting position at night time and during the day

End point title	IOP – Intraocular pressure at supine and sitting position at night time and during the day
End point description: The efficacy analysis for the secondary and exploratory endpoints were carried out using an analysis of covariance (ANCOVA) model with treatment as the main effect and baseline score and study site as covariates. For IOP, the statistical analysis was done for the data obtained from the eye with the higher baseline IOP. If baseline IOP was the same in the two eyes (± 2 mm Hg) the right eye IOP was used.	
End point type	Secondary
End point timeframe: Assessments of this endpoint were conducted at the following visits: Visit 2 (Day 0), Visit 3 (Day 15 +/-2), Visit 4 (Day 30 +/-2)

Adverse events

Adverse events information

Timeframe for reporting adverse events:

AE collection started with administration of the IMP and continued until the follow-up assessment. At the follow-up Visit, information on new AEs or SAEs and stop dates for AEs recorded and ongoing during the dosing period were recorded.

Adverse event reporting additional description:

AEs which occurred after the subject had signed the Informed Consent Form but before the first administration of IMP (pre-treatment adverse events) were collected in the same manner as AEs which occurred after the first administration of IMP.

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 January 2017	This amendment is issued to introduce changes in the conduct or management of the trial including updating the XML file with changes related to the tasks and functions transferred by the sponsor to other organizations, as well as to the decision of the sponsor to reject the participation of the center planned in the Czech Republic to ensure timely completion of the clinical trial; To present an updated version of the IMPD; And to submit a new version of the Informed Consent Form/Patient Information Document (CI/IP) adapted with the new information.
28 March 2017	This amendment was issued to introduce changes in the conduct or management of the trial, including updating the XML file with changes related to the organization and person of contact of the legal representative of the Sponsor. In addition, it is agreed to notify the re-labeling of the medication in accordance with the specifications of the updated IMPD (version 8.0, dated 17 January 2017).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
