

## Clinical trial results:

## A PHASE II/III RANDOMIZED STUDY OF PEMBROLIZUMAB IN PATIENTS WITH ADVANCED MALIGNANT PLEURAL MESOTHELIOMA

### Summary

EudraCT number	2016-002286-60
Trial protocol	FR GB IT
Global end of trial date	25 July 2024

### Results information

Result version number	v1 (current)
This version publication date	26 October 2025
First version publication date	26 October 2025

### Trial information

#### Trial identification

Sponsor protocol code	IND.227
-----------------------	---------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02784171
WHO universal trial number (UTN)	-

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 September 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	16 September 2022
Global end of trial reached?	Yes
Global end of trial date	25 July 2024
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To evaluate whether pembrolizumab, alone or given to patients receiving standard chemotherapy, improves progression free survival in malignant pleural mesothelioma (MPM) compared to standard chemotherapy.

Protection of trial subjects:

Algorithms for management of adverse events were provided in the protocol.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	01 September 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Italy: 212
Country: Number of subjects enrolled	Canada: 137
Country: Number of subjects enrolled	France: 91
Worldwide total number of subjects	440
EEA total number of subjects	303

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	104

From 65 to 84 years	331
85 years and over	5

## Subject disposition

### Recruitment

Recruitment details:

Between 31Jan2017 and 4Sept2020, 440 patients were enrolled and randomly assigned to chemotherapy (218 patients) or chemotherapy plus pembrolizumab (222 patients). Seven patients were enrolled to the chemotherapy group and immediately withdrew consent or were lost to follow-up and were never treated.

### Pre-assignment

Screening details:

Eligible participants were aged 18 years or >, with previously untreated advanced pleural mesothelioma, ECOG PS 0 or 1. Patients were excluded if they had untreated CNS metastases, pneumonitis, glucocorticoids equivalent to more than 10 mg daily of prednisone (within 7 days before the first dose), or with concurrent serious illness or cancer.

### Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
Arm title	Chemo

Arm description:

Cisplatin 75 mg/m<sup>2</sup> (carboplatin [area under the concentration-time curve 5–6 mg/mL per min] could be substituted) for up to 6 cycles + pemetrexed 500 mg/m<sup>2</sup> every 3 weeks for up to 6 cycles.

Arm type	Active comparator
Investigational medicinal product name	Ciplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Intravenous cisplatin 75 mg/m<sup>2</sup> (carboplatin [area under the concentration-time curve 5–6 mg/mL per min] could be substituted) every 3 weeks for up to 6 cycles.

Investigational medicinal product name	Pemetrexed
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Intravenous pemetrexed 500 mg/m<sup>2</sup> every 3 weeks for up to 6 cycles.

Arm title	Chemo+Pembro
-----------	--------------

Arm description:

Cisplatin 75 mg/m<sup>2</sup> (carboplatin [area under the concentration-time curve 5–6 mg/mL per min] could be substituted) for up to 6 cycles + pemetrexed 500 mg/m<sup>2</sup> every 3 weeks for up to 6 cycles + pembrolizumab 200 mg every 3 weeks for up to 2 years.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Ciplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Intravenous cisplatin 75 mg/m<sup>2</sup> (carboplatin [area under the concentration-time curve 5–6 mg/mL per min] could be substituted) every 3 weeks for up to 6 cycles.

Investigational medicinal product name	Pemetrexed
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Intravenous pemetrexed 500 mg/m<sup>2</sup> every 3 weeks for up to 6 cycles.

Investigational medicinal product name	Pembrolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Intravenous pembrolizumab 200 mg every 3 weeks for up to 2 years.

<b>Number of subjects in period 1</b>	Chemo	Chemo+Pembro
Started	218	222
Completed	211	222
Not completed	7	0
Consent withdrawn by subject	7	-

## Baseline characteristics

### Reporting groups

Reporting group title	Chemo
-----------------------	-------

Reporting group description:

Cisplatin 75 mg/m<sup>2</sup> (carboplatin [area under the concentration-time curve 5–6 mg/mL per min] could be substituted) for up to 6 cycles + pemetrexed 500 mg/m<sup>2</sup> every 3 weeks for up to 6 cycles.

Reporting group title	Chemo+Pembro
-----------------------	--------------

Reporting group description:

Cisplatin 75 mg/m<sup>2</sup> (carboplatin [area under the concentration-time curve 5–6 mg/mL per min] could be substituted) for up to 6 cycles + pemetrexed 500 mg/m<sup>2</sup> every 3 weeks for up to 6 cycles + pembrolizumab 200 mg every 3 weeks for up to 2 years.

## End points

### End points reporting groups

Reporting group title	Chemo
Reporting group description: Cisplatin 75 mg/m <sup>2</sup> (carboplatin [area under the concentration-time curve 5–6 mg/mL per min] could be substituted) for up to 6 cycles + pemetrexed 500 mg/m <sup>2</sup> every 3 weeks for up to 6 cycles.	
Reporting group title	Chemo+Pembro
Reporting group description: Cisplatin 75 mg/m <sup>2</sup> (carboplatin [area under the concentration-time curve 5–6 mg/mL per min] could be substituted) for up to 6 cycles + pemetrexed 500 mg/m <sup>2</sup> every 3 weeks for up to 6 cycles + pembrolizumab 200 mg every 3 weeks for up to 2 years.	

### Primary: Overall Survival (OS)

End point title	Overall Survival (OS)
End point description: Time from random assignment to death from any cause. Patients alive at data cutoff were censored at the last day known alive.	
End point type	Primary
End point timeframe: Around 17 months	

End point values	Chemo	Chemo+Pembro		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	211	222		
Units: months				
median (confidence interval 95%)				
All patients	16.1 (13.1 to 18.2)	17.3 (14.4 to 21.3)		
Non-epithelioid histology	8.2 (5.9 to 10.8)	12.3 (8.7 to 21.2)		
Epithelioid histology	18.2 (16.0 to 20.4)	19.8 (16.0 to 22.2)		

### Statistical analyses

Statistical analysis title	Primary criteria
Comparison groups	Chemo v Chemo+Pembro

Number of subjects included in analysis	433
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.05
Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	0.79
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.64
upper limit	0.94

### Secondary: Progression-free survival (PFS)

End point title	Progression-free survival (PFS)
End point description:	Time from the day of random assignment until the first observation of progression or death due to any cause. Patients who were alive without progression were censored at their last date of disease assessment unless definitive therapy had been initiated or two or more consecutive assessments were missed.
End point type	Secondary
End point timeframe:	
Arround 17 months	

End point values	Chemo	Chemo+Pembro

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 December 2016	Changes made to ineligibility criteria regarding pneumonitis following new information received from drug company. The new iRECIST guidelines for immune-oncology trials have been incorporated into the response section of the protocol in order to implement these changes in response assessment.
06 March 2017	Increasingly, Canadian sites are only routinely measuring lipase (and not amylase). Footnote #4 was added to clarify that either lipase or amylase is acceptable. Clarification that the substitution (not only discontinuation) of carboplatin for cisplatin in cases where cisplatin is contraindicated may be allowed on case-by-case basis Central pathology review added as histology is a stratification factor on the study, and epithelioid vs sarcomatoid is difficult to verify based on local pathology reports.
11 April 2018	Study redesigned to a phase 3 study : phase 2 reported separately and all analysed patients were excluded from the phase 3 trial. Clarification added to include future participation of UK sites. Addition of Health Economics Assessment to align with phase III objectives/ design. Patient evaluations updated to include Health Economics, and other updates reflect changes made elsewhere in the protocol with respect to lab and follow up requirements, confirmation of need for iRECIST response evaluations/PD for patients on one of the IO containing arm. Also urinalysis, ECG and electrolytes test frequency has been decreased to ensure consistency with other similar phase III trials; more intensive testing was only planned for the early phase II patients. Section 7.3 updated to reflect additional data/information presented in updated investigators brochures. Changes made to the Dose Modification Guidelines section of the protocol, are largely restructuring (ie to include other new expected events such as myocarditis), in keeping with new information and guidance provided in updated investigator brochures. Statistical analysis updated to reflect phase III objectives and analysis of the increases sample size. Health Utilities Assessment (introduction and copy of questionnaire) now included as new phase III objectives.

03 January 2019	<p>Clarification added to include future participation of France and UK sites.</p> <p>Study schema updated to align with phase III objectives/design.</p> <p>Objectives updated : clarification added to protocol that RECIST 1.1 being used for primary and secondary objective, while iRECIST will be used for exploratory analyses. Standard interim analysis added as now a phase III design. Sample size (n value for phase II vs phase III) clarification added in section 12.3.</p> <p>Treatment and Dose Modification Guidelines updated to reflect additional data/information presented in updated investigators brochure. Changes made to the Dose Modification Guidelines section of the protocol, are largely restructuring (ie discontinue treatment after recurrent grade 3 diarrhea), in keeping with new information and guidance provided in updated investigator brochure. Wording deleted from page 35 as duplicate (monitoring guideline already in Table 2).</p> <p>Update to Eligibility/Ineligibility Criteria : wording updated to reflect CCTG standard of practice. 4.2.11 added to ensure patients receive palliative radiation therapy prior to enrollment, to ensure patient safety with no concurrent radiation on trial and to minimize inevaluability and or the need for censoring for response based endpoints because of other anticancer therapy.</p> <p>Update to Patient Treatment and Follow-up : reference to maximum 6 cycles of chemotherapy added per American Society of Clinical Oncology Clinical Practice Guideline 2018. Clarification added regarding Day 1 re-treatment requirements including steroid taper. Follow-up wording update made to comply with changes to CCTG standard template .</p> <p>Clarification added regarding when central radiology and pathology review will be carried out.</p>
14 April 2020	<p>CCTG to check intent of previous chemo (if any given) prior enrollment to ensure eligibility.</p> <p>CCTG to check extent of previous radiation (if any given to thorax) prior enrollment to ensure eligibility.</p> <p>Clarification added to include LVEF testing for patients with history of hypertension. Rewording to clarify.</p> <p>Patients with arrhythmias controlled on medication, or with a pacemaker are considered to be eligible.</p> <p>Alignment on updated guidelines from 2018 for Modified RECIST for Mesothelioma. mRecist reference added as clarification.</p> <p>SAE definition with pembrolizumab overdose.</p> <p>Emerging data from other trials with immune checkpoint inhibitors and chemotherapy suggested that a hazard ratio of 0.65 is overly optimistic so revised to align with more commonly used hazard ratio of 0.7. That HR would still demonstrate significant benefit to patients in terms of improvement in survival.</p>
27 October 2020	<p>Clarification that collection of all data , including assessments and questionnaires such as QOL cease when the patients withdraws consent to do so.</p> <p>Patients are having delays for the next cycles when on pembrolizumab alone for minor reduction in CrCL likely related to platinum for earlier (combination) cycles. Provide additional information and ensure compliance with GDPR (General Data Protection Regulation).</p> <p>Clarification that BICR will be used for the primary response based analyses, while CCTG will conduct and publish investigator assessed per their SOPs. Some patients on the study have PD assigned based on new dermal lesions.</p> <p>Updated statistical methodology.</p> <p>Updated statistical methodology to reflect alpha spending for multiple endpoints.</p> <p>Clarification that ORR and PFS will also be analysed in the interim analysis.</p> <p>Change in the item used for pain in QOL (from pain to chest pain) to be consistent with prior Merck analyses.</p>
21 June 2021	<p>PD-L1 as a stratification factor has been removed from the protocol and study objective moved from secondary to exploratory.</p> <p>Dose Modification Guidelines for Drug-Related Adverse Events according to the pembrolizumab product monograph dated 2021Mar04.</p>

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Absence of masking might impact adverse event reporting and decision regarding continuation of therapy. Patients in pembro arm were seen more frequently than those in the chemo arm, this would favour the chemo group for adverse event reporting.

Notes:
