## General information about the trial

Main objective of the trial:

The purpose of this study was to determine if treatment with omecamtiv mecarbil (OM) when added to standard of care is well tolerated and superior to placebo in reducing the risk of cardiovascular death or heart failure events in adults with chronic heart failure with reduced ejection fraction (HFrEF).

Protection of trial subjects:

This study was conducted in accordance with International Council for Harmonisation (ICH) Good Clinical Practice (GCP) and applicable national or regional regulations/guidelines.

The Independent Ethics Committee (IEC) and Institutional Review Board (IRB) for this study reviewed the study protocol and amendments and the informed consent form (ICF).

The investigator or his/her designee informed the subject of all aspects pertaining to the subject's participation in the study before any screening procedures were performed.

Background therapy:

Participants were required to be optimally managed with standard of care therapies for chronic HF (eg, beta blockers, renin angiotensin aldosterone system inhibitors), consistent with regional clinical practice guidelines, unless contraindicated.

### Primary: Time to Cardiovascular Death or First Heart Failure Event

End point title	Time to Cardiovascular Death or First Heart Failure Event
End point description: The primary outcome was a composite of a heart-failure (HF) event or cardiovascular death, whichever occurred first, in a time-to-event analysis. A heart-failure event was defined as an urgent clinic visit, emergency department visit, or hospitalization for subjectively and objectively worsening heart failure leading to treatment intensification beyond a change in oral diuretic therapy. All deaths and HF events were adjudicated by an independent external clinical events committee (CEC) at the Duke Clinical Research Institute, using standardized definitions based on the recent American College of Cardiology/American Heart Association (ACC/AHA) standards for endpoint definitions in cardiovascular clinical trials. The percentage of participants with a positively adjudicated event during the study is reported.	
End point type	Primary
End point timeframe: From randomization to up to earliest of last confirmed survival status date or analysis cut-off date (07 August 2020); the overall median duration of follow-up was 21.8 months (interquartile range, 15.4 to 28.6).

[1] - The overall type I error was 0.05 for 2-sided testing across primary and secondary outcomes. Control for multiple comparisons was achieved using the following testing algorithm: if the primary outcome met the P-value threshold of 0.05, the alpha error would be divided unequally between cardiovascular death (96% of the overall alpha error, or 0.048) and change from baseline to week 24 in the Kansas City Cardiomyopathy Questionnaire total symptom score (4% of the overall alpha error, or 0.002).

## **Secondary: Change From Baseline in Kansas City Cardiomyopathy Questionnaire Total Symptom Score (KCCQ TSS) at Week 24**

End point title	Change From Baseline in Kansas City Cardiomyopathy Questionnaire Total Symptom Score (KCCQ TSS) at Week 24
-----------------	--

End point description:

The Kansas City Cardiomyopathy Questionnaire is a self-administered questionnaire with a 2-week recall period that includes 23 items that map to 7 domains: symptom frequency; symptom burden; symptom stability; physical limitations; social limitations; quality of life; and self-efficacy (the patient's understanding of how to manage their heart failure). The symptom frequency and symptom burden domains are merged into a total symptom score. Scores are represented on a 0-to-100-point scale, where lower scores represent more frequent and severe symptoms and scores of 100 indicate no symptoms.

The change from baseline in KCCQ TSS was analyzed separately for each randomization setting (inpatient and outpatient).

Least squares means are from the mixed model which includes baseline total symptom score value, region, baseline eGFR, scheduled visit, treatment group and interaction of treatment with scheduled visit as covariates.

3) The participant exhibited documented new or worsening symptoms due to HF on presentation;	
4) The participant had objective evidence of new or worsening HF;	
5) The participant received initiation or intensification of treatment specifically for HF, including an intravenous diuretic or vasoactive agent, mechanical or surgical intervention, or mechanical fluid removal.
