Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001646-PIP01-14
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 February 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	19 November 2019
Global end of trial reached?	Yes
Global end of trial date	26 February 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the Pharmacokinetics (PK) Lead-in Phase was to evaluate the steady state PK and confirm the dose of sofosbuvir/velpatasvir (SOF/VEL) fixed-dose combination (FDC) in pediatric participants with chronic hepatitis C virus (HCV) infection. The primary objective of the Treatment Phase was to evaluate the safety and tolerability of SOF/VEL for 12 weeks in pediatric participants with chronic HCV.

Protection of trial subjects:

The protocol and consent/assent forms were submitted by each investigator to a duly constituted Independent Ethics Committee (IEC) or Institutional Review Board (IRB) for review and approval before study initiation. All revisions to the consent/assent forms (if applicable) after initial IEC/IRB approval were submitted by the investigator to the IEC/IRB for review and approval before implementation in accordance with regulatory requirements. This study was conducted in accordance with recognized international scientific and ethical standards, including but not limited to the International Conference on Harmonization guideline for Good Clinical Practice (ICH GCP) and the original principles embodied in the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 January 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 15
Country: Number of subjects enrolled	United States: 172
Country: Number of subjects enrolled	Belgium: 5
Country: Number of subjects enrolled	Italy: 24
Worldwide total number of subjects	216
EEA total number of subjects	44

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	114
Adolescents (12-17 years)	102
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were enrolled at 28 study sites in Belgium, Italy, the United Kingdom, and the United States. The first participant was screened on 26 January 2017. The final on-study visit occurred on 26 February 2020.

Pre-assignment

Screening details:

221 participants were screened.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	12 to < 18 Years Old

Arm description:

PK Lead-in Phase: Sofosbuvir/Velpatasvir (SOF/VEL) fixed-dose combination (FDC) 400/100 mg tablets or 2 * 200/50 mg tablets once daily for 7 days. Participants who completed the PK lead-in phase and other additional participants were enrolled into the treatment phase with no interruption of study drug administration until the appropriateness of the dose had been confirmed by PK and safety results from the PK lead-in phase.

Treatment Phase: SOF/VEL FDC 400/100 mg tablets or 2 * 200/50 mg tablets once daily for 12 weeks.

Arm type	Experimental
Investigational medicinal product name	SOF/VEL FDC
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet, Granules
Routes of administration	Oral use

Dosage and administration details:

Tablets or oral granules administered once daily.

Arm title	6 to < 12 Years Old
------------------	---------------------

Arm description:

PK Lead-in Phase: SOF/VEL FDC 200/50 mg tablets or oral granules once daily for 7 days. Participants who completed the PK lead-in phase and other additional participants were enrolled into the treatment phase with no interruption of study drug administration until the appropriateness of the dose had been confirmed by PK and safety results from the PK lead-in phase.

Treatment Phase: SOF/VEL FDC 200/50 mg tablets or oral granules once daily for 12 weeks.

Arm type	Experimental
Investigational medicinal product name	SOF/VEL FDC
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Granules, Tablet
Routes of administration	Oral use

Dosage and administration details:

Tablets or oral granules administered once daily.

Arm title	3 to < 6 Years Old
------------------	--------------------

Arm description:

PK Lead-in Phase: SOF/VEL FDC 200/50 mg oral granules once daily for 7 days for participants who weighed ≥ 17 kg. SOF/VEL 150/37.5 mg FDC oral granules once daily for 7 days for participants who

weighed < 17 kg. Participants who completed the PK lead-in phase and other additional participants were enrolled into the treatment phase with no interruption of study drug administration until the appropriateness of the dose had been confirmed by PK and safety results from the PK lead-in phase. Treatment Phase: SOF/VEL FDC 200/50 mg oral granules once daily for 12 weeks for participants who weighed ≥ 17 kg. SOF/VEL 150/37.5 mg FDC oral granules once daily for 12 weeks for participants who weighed < 17 kg.

Arm type	Experimental
Investigational medicinal product name	SOF/VEL FDC
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Granules, Tablet
Routes of administration	Oral use

Dosage and administration details:

Tablets or oral granules administered once daily.

Number of subjects in period 1	12 to < 18 Years Old	6 to < 12 Years Old	3 to < 6 Years Old

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: 17 subjects participated in the PK lead-in phase and continued treatment in the treatment phase and thus are included in the total number of subjects started, completed, and not completed. Additional participants were enrolled in the treatment phase upon confirmation of the appropriateness of the dose from the PK lead-in phase.

[2] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: 20 subjects participated in the PK lead-in phase and continued treatment in the treatment phase and thus are included in the total number of subjects started, completed, and not completed. Additional participants were enrolled in the treatment phase upon confirmation of the appropriateness of the dose from the PK lead-in phase.

[3] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: 19 subjects participated in the PK lead-in phase and continued treatment in the treatment phase and thus are included in the total number of subjects started, completed, and not completed. Additional participants were enrolled in the treatment phase upon confirmation of the appropriateness of the dose from the PK lead-in phase.

Primary: Treatment Phase: Percentage of Participants Who Discontinued Study Drug Due to Any Treatment-Emergent Adverse Event (TEAE)

End point title	Treatment Phase: Percentage of Participants Who Discontinued Study Drug Due to Any Treatment-Emergent Adverse Event (TEAE) ^[4]
-----------------	---

End point description:

An AE is any untoward medical occurrence in a clinical study participant administered a medicinal product, which does not necessarily have a causal relationship with the treatment. An AE can therefore be any unfavorable and/or unintended sign, symptom, or disease temporally associated with the use of a medicinal product, whether or not considered related to the medicinal product. TEAEs were defined as 1 or both of the following: Any AEs with an onset date on or after the study drug start date and no later than 30 days after permanent discontinuation of study drug and/or Any AEs leading to premature discontinuation of study drug. The Safety Analysis Set included all participants who were enrolled into the study and received at least 1 dose of study drug (SOF/VEL FDC).

Secondary: Treatment Phase: Percentage of Participants Who Develop Viral Resistance to SOF and/or VEL During Treatment and After Discontinuation of Treatment

End point title	Treatment Phase: Percentage of Participants Who Develop Viral Resistance to SOF and/or VEL During Treatment and After Discontinuation of Treatment
-----------------	--

End point description:

Drug-resistant substitutions were analyzed as part of the Virology Study. Plasma samples were collected and stored for potential HCV sequencing. Impact on the treatment outcomes of SVR12 and SVR24 were observed during the study. Baseline deep sequencing of the HCV nonstructural protein (NS)5A and NS5B genes was performed for all participants at the first time point after virologic failure if the plasma or serum sample was available. Pretreatment full-length NS5A deep sequencing data were obtained at a 15% assay cutoff for the Resistance Analysis Population which covered all NS5A and NS5B nucleoside inhibitor (NI) resistance-associated variants (RAVs).

Secondary: Treatment Phase: Quality of Life (QoL) and Neuropsychiatric Assessments as Measured by PedsQL™ Pediatric QoL Survey

End point title	Treatment Phase: Quality of Life (QoL) and Neuropsychiatric Assessments as Measured by PedsQL™ Pediatric QoL Survey
-----------------	---

End point description:

To evaluate the effect of treatment with SOF/VEL on general and disease-specific health-related QoL, the PedsQL™ Pediatric QoL Inventory V4.0 Short Form (SF15) was completed at Day 1 (baseline/BL), end of treatment (EOT), early termination (if applicable), and posttreatment Weeks (Wk) 12 (follow up-12/FU-12) and 24. The SF15 questionnaire represented 4 domains: physical, emotional, social, and school functioning, with the emotional, social, and school functioning domains representing the psychosocial health summary. Neuropsychiatric assessment was conducted using the PedsQL™ Pediatric QoL Inventory V4.0 SF15 psychosocial domain-related scores. Items were calculated and transformed into an overall score with a range of 0 to 100 points, with more points indicating better QoL. Participants in the Full Analysis Set with available data were analyzed.

Secondary: Treatment Phase: Changes in Growth and Development as Measured by Tanner Stage Assessment From Baseline

End point title	Treatment Phase: Changes in Growth and Development as Measured by Tanner Stage Assessment From Baseline
End point description:	
Tanner Pubertal Staging was assessed for pubic hair growth and genitalia development (males) and for pubic hair growth and breast development (females) in stages 1 to 5. Tanner stages were used to evaluate the onset and progression of pubertal changes from stage 1 (pre-pubertal) to stage 5 (adult). If a participant had reached Tanner stage 5, no further Tanner pubertal stage assessments were to be completed. Pubic hair growth: Tanner stages (1: No hair, 2: Downy hair, 3: More coarse and curly hair, 4: Adult-like hair quality; 5: Hair extends to the medial surface of the thighs); Breast development: Tanner stages (1: No glandular tissue, 2: Breast bud forms, 3: More elevated, outside areola, 4: Increased breast size, 5: Final adult-size breasts); Genitalia development: Tanner stages (1: Testes, scrotum, and penis about same size, 2: Enlargement of scrotum, testes and penis, 3: Enlargement of penis, 4: Penis size enlargement, 5: Genitalia adult in size and shape). Secondary: Growth and Development as Measured by Parental Height

End point title	Growth and Development as Measured by Parental Height
End point description:	
Mid-parental height was calculated as the average of the biological father's and mother's heights. For boys, the sex adjusted mid-parental height was calculated by adding 2.5 inches or 6.5 cm to the mean of the parents' heights. For girls, 2.5 inches or 6.5 cm was subtracted from the mean of the parents' heights. Participants in the Safety Analysis Set with available data were analyzed.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events: From first dose through last dose of the study drug (Up to 12 weeks) plus 30 days; All-Cause Mortality: First dose date up to Posttreatment Week 24

Adverse event reporting additional description:

The Safety Analysis Set included all participants who were enrolled into the study and received at least 1 dose of study drug (SOF/VEL FDC).

Assessment type	Systematic

Reporting groups

Reporting group title	12 to < 18 Years Old
-----------------------	----------------------

Reporting group description:

PK Lead-in Phase: Sofosbuvir/Velpatasvir (SOF/VEL) fixed-dose combination (FDC) 400/100 mg tablets or oral granules once daily for 7 days. Participants who completed the PK lead-in phase and other additional participants were enrolled into the treatment phase with no interruption of study drug administration until the appropriateness of the dose had been confirmed by PK and safety results from the PK lead-in phase.

Treatment Phase: SOF/VEL FDC 400/100 mg tablets or oral granules once daily for 12 weeks.

Reporting group title	6 to < 12 Years Old
-----------------------	---------------------

Reporting group description:

PK Lead-in Phase: SOF/VEL FDC 200/50 mg tablets or oral granules once daily for 7 days. Participants who completed the PK lead-in phase, continued into the treatment phase with no interruption of study drug administration and additional participants were enrolled into the treatment phase once the appropriateness of the dose was confirmed by PK results from the PK lead-in phase.

Treatment Phase: SOF/VEL FDC 200/50 mg tablets or oral granules once daily for 12 weeks.

Reporting group title	3 to < 6 Years Old
-----------------------	--------------------

Reporting group description:

PK Lead-in Phase: SOF/VEL FDC 200/50 mg oral granules once daily for 7 days for participants who weighed ≥ 17 kg. SOF/VEL FDC 150/37.5 mg oral granules once daily for 7 days for participants who weighed < 17 kg. Participants who completed the PK lead-in phase, continued into the treatment phase with no interruption of study drug administration and additional participants were enrolled into the treatment phase once the appropriateness of the dose was confirmed by PK results from the PK lead-in phase.

Treatment Phase: SOF/VEL FDC 200/50 mg oral granules once daily for 12 weeks for participants who weighed ≥ 17 kg. SOF/VEL FDC 150/37.5 mg oral granules once daily for 12 weeks for participants who weighed < 17 kg.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
20 September 2016	<ul style="list-style-type: none">• Added clarification that all adverse events (AEs) were recorded with a focus on those AEs leading to study drug discontinuation for evaluation of the primary safety endpoint• Updated the SOF/VEL stopping criteria to align with the LDV/SOF and SOF laboratory stopping criteria in adult and pediatric clinical studies• Added eligibility criteria pertaining to liver enzymes and bilirubin to align with the exclusion criteria parameters in SOF/VEL adult clinical studies• Clarified that only the subject was required to complete the acceptability questionnaire at Day 1, but it may be completed by the parent or legal guardian if the subject is unable to read• Clarified that the Day 3 study visit was performed over the phone and the site assessed the subject's dosing compliance by reviewing the dosing diary remotely with the subject, parent, or legal guardian• Added SOF/VEL Acceptability Questionnaire assessment to the early termination visit• Appendix 3 (Management of Clinical and Laboratory AEs) was removed due to a discrepancy in the protocol stopping rules within the protocol
01 December 2016	<ul style="list-style-type: none">• Added serial hepatitis B virus (HBV) DNA monitoring for any subject with hepatitis B core antibody (HBcAb)-positive status at screening, per a US Food and Drug Administration Drug Safety Communication• Added formulation, packaging, labeling, storage, and handling information for the SOF/VEL 200/50 mg and placebo tablets
31 August 2017	<ul style="list-style-type: none">• Added clinical pharmacology data and safety results from Cohort 1 from the PK lead-in phase supporting the dose for subjects 12 to < 18 years old (Group 1) in the treatment phase and dose determination for Cohort 2 (6 to < 12 years old) in the PK lead-in phase• Added an optional intensive PK substudy for adolescent subjects 12 to < 18 years old enrolled in the treatment phase at Weeks 4 or 8 to support development of the population PK model• Added additional time points to the intensive PK assessment for Cohort 3 (subjects 3 to < 6 years old) to support characterization of PK of all analytes in the youngest age group• Added clarification of the sparse PK sample at Weeks 1, 4, 8, and 12• Added a second sparse PK sample at Weeks 4 and 8 for all enrolled subjects• Clarified that the non-tablet formulation information would be included in a future protocol amendment once it was available and would be submitted for approval prior to dosing of subjects• Added biomarker testing to align with the Gilead Sciences (Gilead) protocol template• Updated the dosing instructions in the case of vomiting to align with the SOF/VEL label• Updated the background information to include Studies GS-US-342-1553 and GS US 342 1146 since both of these studies were not included in the SOF/VEL investigator's brochure (IB)

15 June 2018	<ul style="list-style-type: none"> • Added clinical pharmacology data from Cohort 2 from the PK lead-in phase supporting the dose for subjects 3 to < 6 years old (Cohort 3) in the PK lead-in phase • Added dosing instructions for subjects 3 to < 6 years old • Added information on the oral granule formulation, including the dose for each age group and dosing instructions • Added subject dosing diary for subjects who were administered oral granules • Clarified dosing instructions for subjects 6 to < 12 years old • Clarified collection of parental height • Clarified requirements for the complete and symptom-directed physical examinations • Updated the disallowed and concomitant medication table to align with the table in the SOF/VEL FDC IB (Edition 5.0; dated 12 December 2017) • Updated the list of PK parameters to align with regulatory commitments • Updated the schedule of assessments for consistency
