Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 July 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	06 November 2019
Global end of trial reached?	Yes
Global end of trial date	06 November 2019
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To compare overall survival (OS) of patients who receive 145 mg/m² NKTR-102 given once every 21 days (q21d) with OS of patients who receive Treatment of Physician's Choice (TPC) selected from the following list of 7 single-agent intravenous (IV) therapies: eribulin, ixabepilone, vinorelbine, gemcitabine, paclitaxel, docetaxel, or nab-paclitaxel. TPC drugs will be administered per the standard of care.

Protection of trial subjects:

Written informed consent was obtained from patients at the Screening Visit prior to performance of any study-specific tests or evaluations. The Investigator, or a person designated by the Investigator, explained to each patient or the patient's legally authorized representative (LAR) the nature of the study, its purpose, the procedures involved, the expected duration, the potential risks and benefits involved, and any discomfort participation in the study may entail. Each patient or the patient's LAR was informed that participation in the study was voluntary and that the patient would be able to withdraw from the study at any time, and that withdrawal of consent would not affect the patient's subsequent medical treatment or relationship with the treating physician.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	07 March 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Portugal: 6
Country: Number of subjects enrolled	Spain: 21
Country: Number of subjects enrolled	United Kingdom: 5
Country: Number of subjects enrolled	Belgium: 17
Country: Number of subjects enrolled	France: 16
Country: Number of subjects enrolled	Italy: 6
Country: Number of subjects enrolled	United States: 85
Country: Number of subjects enrolled	Australia: 13
Country: Number of subjects enrolled	Canada: 2
Country: Number of subjects enrolled	Israel: 7
Worldwide total number of subjects	178
EEA total number of subjects	66

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	149
From 65 to 84 years	29
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Eligibility to the study was inclusive of patients with breast cancer brain metastases and any breast cancer tumor subtype.

Period 1

Period 1 title	Baseline Characteristics (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	NKTR-102

Arm description:

NKTR-102 will be administered at a dose level of 145 mg/m² on a q21d schedule as a 90-minute intravenous (IV) infusion on Day 1 of each treatment cycle.

Arm type	Experimental
Investigational medicinal product name	Etirinotecan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion in administration system
Routes of administration	Intravenous use

Dosage and administration details:

NKTR-102 will be administered at a dose level of 145 mg/m² on a q21d schedule as a 90-minute intravenous (IV) infusion on Day 1 of each treatment cycle.

Arm title	Treatment of Physician's Choice (TPC)
------------------	---------------------------------------

Arm description:

TPC will be administered per standard of care. Patients randomized to TPC will receive single-agent IV chemotherapy, limited to choice of one of the following 7 agents: eribulin, ixabepilone, vinorelbine, gemcitabine, paclitaxel, docetaxel, or nab-paclitaxel.

Arm type	Active comparator
Investigational medicinal product name	Eribulin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Give specified dose on specified days

Investigational medicinal product name	Ixabepilone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Give specified dose on specified days

Investigational medicinal product name	Vinorelbine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use
Dosage and administration details:	
Give specified dose on specified days	
Investigational medicinal product name	Gemcitabine

Reporting group title	NKTR-102
Reporting group description: NKTR-102 will be administered at a dose level of 145 mg/m ² on a q21d schedule as a 90-minute intravenous (IV) infusion on Day 1 of each treatment cycle.	
Reporting group title	Treatment of Physician's Choice (TPC)
Reporting group description: TPC will be administered per standard of care. Patients randomized to TPC will receive single-agent IV chemotherapy, limited to choice of one of the following 7 agents: eribulin, ixabepilone, vinorelbine, gemcitabine, paclitaxel, docetaxel, or nab-paclitaxel.	
Subject analysis set title	Subject Analysis Set
Subject analysis set type	Intention-to-treat
Subject analysis set description: All patients who were randomized in the study were included in the ITT population.	

Primary: Overall Survival (OS) of Patients

End point title	Overall Survival (OS) of Patients
End point description: To compare Overall Survival (OS) of patients who receive 145 mg/m ² NKTR-102 given once every 21 days (q21d) with OS of patients who receive Treatment of Physician's Choice (TPC). Overall survival is defined as the time from the date of randomization to the date of death from any cause. Patients will be followed until their date of death or until final database closure. Patients who are lost-to-follow-up or are alive at the time of analysis will be censored at the time they were last known to be alive or at the date of event cut-off for OS analysis.	
End point type	Primary
End point timeframe: Within 3 years from study start	

End point values	NKTR-102	Treatment of Physician's Choice (TPC)		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	92	86		
Units: Months				
median (confidence interval 95%)	7.8 (6.1 to 10.2)	7.5 (5.8 to 10.4)		

Statistical analyses

Statistical analysis title	Primary Endpoint Analysis
Statistical analysis description: The primary analysis of OS was the CHW test with pre-specified weights (Cui, Hung, Wang, 1999). The conventional test with equal weights for every patient was conducted as a sensitivity analysis. The median survival times and their 95% confidence intervals (CIs) as well as survival curves were estimated using the Kaplan-Meier method and were summarized by treatment group. The 2-sided significance level for superiority at final analysis of OS was 0.0499.	
Comparison groups	NKTR-102 v Treatment of Physician's Choice (TPC)

Number of subjects included in analysis	178
Analysis specification	Pre-specified
Analysis type	superiority ^[1]
P-value	≤ 0.0499
Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	0.901
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.612
upper limit	1.326
Variability estimate	Standard deviation

Notes:

[1] - At final analysis, the primary analysis of OS for statistical significance claim will be based on the CHW version of the logrank test statistic with weights (Cui, Hung, & Wang, 1999). Based on the correlation between interim and final CHW test statistic, statistical significance can be claimed if the two-sided p-value for CHW test statistic is no greater than 0.0499. The conventional logrank test with equal weights for every patient will be conducted as a sensitivity analysis.

Secondary: Progression-Free Survival (Outside the Central Nervous System)

End point title	Progression-Free Survival (Outside the Central Nervous System)
End point description:	
Progression-Free Survival (PFS) is defined as the time from the date of randomization to the earliest evidence of documented Progressive Disease (PD) or of death from any cause. The date of global deterioration or symptomatic deterioration will not be used as the date of PD.	
End point type	Secondary
End point timeframe:	
Through study completion, an expected average of 1 year
