End point title	Change from Baseline in Health-Related Quality of Life (HRQoL) using Functional Assessment of Cancer Therapy-Lung (FACT-L) <sup>[9]</sup>
-----------------	---

**End point description:**

FACT-L is a quality-of-life questionnaire which includes the Lung Cancer Subscale (LCS) that assesses the treatment impact on lung cancer related symptoms in 5 domains: Physical, social/family, emotional, and functional well-being using a 5-point scale (0=not at all) to (4=very much) added to obtain total score. The ranges of possible total scores are 0 - 136 for the FACT-L with a higher score representing better quality of life, improved symptomatology and enhanced physical/functional outcomes. According to Functional Assessment of Chronic Illness Therapy scoring guidelines, in the event of missing responses for some of the questions/items, scores will be prorated using the average of the other answers in that scale.

Baseline is defined as evaluations or events that occur before the date and time of the first dose of study treatment.

Post treatment follow-up includes 2 visits for safety and subsequent survival follow-up every 3 months. 99999=Not available
