Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 December 2022
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	12 December 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of the trial was to assess the safety of atezolizumab as second- to fourth-line treatment for participants with locally advanced or metastatic urothelial or non-urothelial cancer of the urinary tract in addition to evaluating the efficacy of atezolizumab and potential tumor biomarkers associated with atezolizumab.

Protection of trial subjects:

All study subjects were required to read and sign and Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 November 2016
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	4 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 8
Country: Number of subjects enrolled	Australia: 58
Country: Number of subjects enrolled	Austria: 17
Country: Number of subjects enrolled	Belgium: 20
Country: Number of subjects enrolled	Brazil: 32
Country: Number of subjects enrolled	Bulgaria: 3
Country: Number of subjects enrolled	Canada: 17
Country: Number of subjects enrolled	China: 3
Country: Number of subjects enrolled	Colombia: 8
Country: Number of subjects enrolled	Croatia: 12
Country: Number of subjects enrolled	Czechia: 10
Country: Number of subjects enrolled	Denmark: 20
Country: Number of subjects enrolled	Estonia: 3
Country: Number of subjects enrolled	Germany: 55
Country: Number of subjects enrolled	Greece: 40
Country: Number of subjects enrolled	Hungary: 33
Country: Number of subjects enrolled	India: 11
Country: Number of subjects enrolled	Ireland: 15

Country: Number of subjects enrolled	Italy: 270
Country: Number of subjects enrolled	Lebanon: 5
Country: Number of subjects enrolled	Lithuania: 11
Country: Number of subjects enrolled	Netherlands: 34
Country: Number of subjects enrolled	Poland: 20
Country: Number of subjects enrolled	Portugal: 14
Country: Number of subjects enrolled	Romania: 20
Country: Number of subjects enrolled	Russian Federation: 10
Country: Number of subjects enrolled	Saudi Arabia: 5
Country: Number of subjects enrolled	Slovakia: 9
Country: Number of subjects enrolled	Spain: 170
Country: Number of subjects enrolled	Switzerland: 25
Country: Number of subjects enrolled	Taiwan: 6
Country: Number of subjects enrolled	United Kingdom: 40
Worldwide total number of subjects	1004
EEA total number of subjects	776

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	378
From 65 to 84 years	613
85 years and over	13

Subject disposition

Recruitment

Recruitment details:

This study was conducted at 172 centers in 32 countries

Pre-assignment

Screening details: -

Pre-assignment period milestones

Number of subjects started	1004
Number of subjects completed	997

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Did not receive study treatment: 7

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	Atezolizumab

Arm description:

Participants received atezolizumab every 3 weeks (Q3W) until investigator assessed loss of clinical benefit, unacceptable toxicity, investigator or participant decision to withdraw from therapy, or death (whichever occurred first).

Arm type	Experimental
Investigational medicinal product name	Atezolizumab
Investigational medicinal product code	
Other name	MPDL3280A
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Atezolizumab 1200 milligrams (mg) was administered by intravenous (IV) infusion Q3W.

Number of subjects in period 1[1]	Atezolizumab
Started	997
Completed	0
Not completed	997
Consent withdrawn by subject	40
Physician decision	1
Death	775
Non-compliance	1

Study terminated by sponsor	57
Various reasonse	72
Progressive disease	3
Lost to follow-up	48

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: This number is based on the safety population, that is those participants who were enrolled and received at least one dose of study treatment

Baseline characteristics

Reporting groups	
Reporting group title	Atezolizumab
Reporting group description:	
Participants received atezolizumab every 3 weeks (Q3W) until investigator assessed loss of clinical benefit, unacceptable toxicity, investigator or participant decision to withdraw from therapy, or death (whichever occurred first).	

Reporting group values	Atezolizumab	Total	
Number of subjects	997	997	
Age Categorical Units: Subjects			
In utero	0	0	
Preterm newborn infants (gestational age < 37 wks)	0	0	
Newborns (0-27 days)	0	0	
Infants and toddlers (28 days-23 months)	0	0	
Children (2-11 years)	0	0	
Adolescents (12-17 years)	0	0	
Adults (18-64 years)	375	375	
From 65-84 years	609	609	
85 years and over	13	13	
Age Continuous Units: years			
arithmetic mean	66.6		
standard deviation	± 10.00	-	
Gender Categorical Units: Participants			
Female	225	225	
Male	772	772	
Race (NIH/OMB) Units: Subjects			
American Indian or Alaska Native	11	11	
Asian	30	30	
Native Hawaiian or Other Pacific Islander	0	0	
Black or African American	4	4	
White	920	920	
More than one race	0	0	
Unknown or Not Reported	32	32	
Ethnicity (NIH/OMB) Units: Subjects			
Hispanic or Latino	112	112	
Not Hispanic or Latino	820	820	
Unknown or Not Reported	65	65	

End points

End points reporting groups

Reporting group title	Atezolizumab
Reporting group description:	
Participants received atezolizumab every 3 weeks (Q3W) until investigator assessed loss of clinical benefit, unacceptable toxicity, investigator or participant decision to withdraw from therapy, or death (whichever occurred first).	
Subject analysis set title	Intent to Treat (ITT)
Subject analysis set type	Intention-to-treat
Subject analysis set description:	
This is the ITT population	

Primary: Percentage of Participants With Adverse Events (AEs)

End point title	Percentage of Participants With Adverse Events (AEs)[1]
End point description:	
AEs were defined as any untoward medical occurrence in a subject administered a pharmaceutical product, regardless of causal attribution. An AE can be any unfavorable and unintended sign, symptom, or disease temporally associated with the use of a medicinal product, whether or not considered related to the medicinal product. New disease, exacerbation of existing disease, recurrence of an intermittent medical condition not present at baseline, any deterioration in a laboratory value or other clinical test associated with symptoms or leading to a change in study/concomitant treatment or discontinuation from study drug as well as events related to protocol-mandated interventions are considered AEs. The safety population included all enrolled participants who received at least one dose of study medication.	
End point type	Primary
End point timeframe:	
Baseline up to end of study (up to approximately 6 years)	
Notes:	
[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: The incidence of AEs are summarized by frequency tables. Corresponding 95% Clopper-Pearson confidence intervals (CIs) are also presented, as applicable. Complicated statistical methods for AEs analysis are rarely used, and there is a reliance on simple approaches to display information such as in frequency tables and descriptive statistics.	

End point values	Atezolizumab			
Subject group type	Reporting group			
Number of subjects analysed	900			
Units: Percentage of participants				
number (not applicable)	90.3			

Statistical analyses

No statistical analyses for this end point

Secondary: PFS as per Modified Response Evaluation Criteria in Solid Tumors (Modified RECIST)

End point title	PFS as per Modified Response Evaluation Criteria in Solid Tumors (Modified RECIST)

End point description:

PFS as per Modified RECIST was defined as:
- date of first occurrence of tumor progression after a modified confirmed response if the participant was a responder according to modified RECIST or
- date of first occurrence of tumor progression in case the participant was not a responder according to modified RECIST or
- date of death (in the absence of tumor progression) by any cause, or
- date of censoring
whichever occurred first, minus date of start of study treatment plus 1

The ITT population included all enrolled participants.

End point type	Secondary

End point timeframe:

Randomization up to disease progression or death from any cause, whichever occurred first (up to approximately 6 years)

End point values	Intent to Treat (ITT)			
Subject group type	Subject analysis set			
Number of subjects analysed	1004			
Units: Months				
median (confidence interval 95%)	2.79 (2.37 to 3.45)			

Statistical analyses

No statistical analyses for this end point

Secondary: Progression Free Survival (PFS) as per Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST v1.1)

End point title	Progression Free Survival (PFS) as per Response Evaluation Criteria in Solid Tumors Version 1.1 (RECIST v1.1)

End point description:

PFS was defined as the date of first occurrence of tumor progression (earliest of the dates of the RECIST component indicating tumor progression) or date of death (in the absence of tumor progression) by any cause, whichever occurred first, or date of censoring minus date of start of study treatment plus 1.

End point type	Secondary

End point timeframe:

Randomization up to disease progression or death from any cause, whichever occurred first (up to approximately 6 years)

End point values	Intent to Treat (ITT)			
Subject group type	Subject analysis set			
Number of subjects analysed	1004			
Units: Months				
median (confidence interval 95%)	2.20 (2.14 to 2.40)			

Statistical analyses

No statistical analyses for this end point

Secondary: Overall Survival (OS)

End point title	Overall Survival (OS)

End point description:

OS was defined as date of death (due to any cause) or censoring minus date of start of study treatment plus 1.

The intent-to-treat (ITT) population included all enrolled participants.

End point type	Secondary

End point timeframe:

Randomization until death from any cause (up to approximately 6 years)

End point values	Intent to Treat (ITT)			
Subject group type	Subject analysis set			
Number of subjects analysed	1004			
Units: Months				
median (confidence interval 95%)	8.57 (7.75 to 9.72)			

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Participants With Best Overall Response (BOR) as Assessed by RECIST v1.1

End point title	Percentage of Participants With Best Overall Response (BOR) as Assessed by RECIST v1.1

End point description:

BOR was assessed by the investigators according to the RECIST v1.1. BOR was defined as a complete response (CR) or partial response (PR) determined on two consecutive investigator assessments >= 4 weeks apart in participants with measurable disease at baseline. CR = Disappearance of all target lesions. Any pathological lymph nodes (whether target or nontarget) must have reduction in short axis to <10 millimeters (mm); PR = At least a 30% decrease in the sum of diameters of target lesions, taking as reference the baseline sum of diameters. Progressive Disease (PD) = At least a 20% increase in the sum of diameters of target lesions, taking as reference the smallest sum on study (nadir), including baseline. In addition to the relative increase of 20%, the sum must have demonstrated an absolute increase of at least 5 mm. Stable Disease (SD) = Neither sufficient shrinkage to qualify for PR nor sufficient increase to qualify for PD, taking as reference the smallest sum on study.

End point type	Secondary

End point timeframe:

Randomization up to disease progression or death from any cause, whichever occurred first (up to approximately 6 years)

End point values	Intent to Treat (ITT)			
Subject group type	Subject analysis set			
Number of subjects analysed	1004			
Units: Percentage of participants				
number (confidence interval 95%)	15.7 (13.5 to 18.1)			

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Participants With BOR as Assessed by Modified RECIST

End point title	Percentage of Participants With BOR as Assessed by Modified RECIST

End point description:

BOR was assessed by the investigators according to the modified RECIST. BOR was defined as complete response (CR) or partial response (PR). CR includes complete disappearance of all tumor lesions and no new measurable or unmeasurable lesions confirmed by a consecutive assessment >=4 weeks from the first documented date. PR is a decrease in the sum of the diameters of all target and all new measurable lesions >=30%, relative to baseline, in the absence of CR confirmed by a consecutive assessment >=4 weeks from the first documented date. The assessment of BOR included post-screening RECIST assessments obtained up to: 1) death from any cause, 2) last evaluable RECIST assessment in the absence of death, 3) start of a subsequent anti-cancer therapy, whichever occurred first. The ITT population included all enrolled participants.

End point type	Secondary

End point timeframe:

Randomization up to disease progression or death from any cause, whichever occurred first (up to approximately 6 years)

End point values	Intent to Treat (ITT)			
Subject group type	Subject analysis set			
Number of subjects analysed	1004			
Units: Percentage of participants				
number (confidence interval 95%)	16.4 (14.2 to 18.9)			

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Participants With Disease Control as Assessed by Modified RECIST

End point title	Percentage of Participants With Disease Control as Assessed by Modified RECIST

End point description:

Disease control was determined separately on disease status using modified RECIST by the investigator. Disease control rate was defined as the sum of the complete response, partial response, and stable disease rates. The ITT population included all enrolled participants.

End point type	Secondary

End point timeframe:

Randomization up to disease progression or death from any cause, whichever occurred first (up to approximately 6 years)

End point values	Intent to Treat (ITT)			
Subject group type	Subject analysis set			
Number of subjects analysed	1004			
Units: Percentage of participants				
number (confidence interval 95%)	46.0 (42.9 to 49.2)			

Statistical analyses

No statistical analyses for this end point

End point title	Percentage of Participants With Disease Control as Assessed by RECIST v1.1

End point description:

Disease control was determined separately on disease status using RECIST v1.1 by the investigator. Disease control rate was defined as the sum of the complete response, partial response, and stable disease rates. The ITT population included all enrolled participants.

End point type	Secondary

End point timeframe:

Randomization up to disease progression or death from any cause, whichever occurred first (up to approximately 6 years)

End point values	Intent to Treat (ITT)			
Subject group type	Subject analysis set			
Number of subjects analysed	1004			
Units: Percentage of participants				
number (confidence interval 95%)	39.9 (36.9 to 43.0)			

Statistical analyses

No statistical analyses for this end point

Secondary: Change From Baseline in Health-Related Quality of Life (HRQoL), as Assessed Using European Organization for Research and Treatment of Cancer (EORTC) Quality-of-Life Questionnaire Core 30 (QLQ-C30) Score

End point title	Change From Baseline in Health-Related Quality of Life (HRQoL), as Assessed Using European Organization for Research and Treatment of Cancer (EORTC) Quality-of-Life Questionnaire Core 30 (QLQ-C30) Score

End point description:

The EORTC QLQ-C30 included global health status, functional scales (physical, role, emotional, cognitive, and social), symptom scales (fatigue, nausea/vomiting, and pain) and single items (dyspnoea, insomnia, appetite loss, constipation, diarrhea, and financial difficulties). Most questions used a 4-point scale (1 'Not at all' to 4 'Very much'; 2 questions used 7-point scale [1 'very poor' to 7 'Excellent']). Scores were averaged and transformed to 0 - 100 scale. Higher scores on the global health status and functional scales indicated better health status/function. Higher scores on the symptoms scales and symptom items indicated greater symptom burden. The ITT population included all enrolled participants who completed the questionnaire at baseline and had 1 post-baseline assessment.

End point type	Secondary

End point timeframe:

Baseline, Day 1 of Cycles 1, 2, 3 and thereafter every 9 weeks for 54 weeks from study treatment start; and then every 12 weeks until progression/study discontinuation (up to approximately 6 years) (Cycle length = 21 days)

Statistical analyses

No statistical analyses for this end point

Secondary: Duration of Response (DOR) as Assessed by RECIST v1.1

End point title	Duration of Response (DOR) as Assessed by RECIST v1.1

End point description:

Duration of response was determined separately on disease status using RECIST v1.1 by the investigator. For overall responders, DoR was defined as the time from the date of first occurrence of a confirmed response (complete response or partial response) to date of tumor progression or death from any cause, or to censoring date: 1) end of response coincided with the date of tumor progression or death (in the absence of tumor progression) used for the PFS endpoint, 2) for a participant without disease progression or death following a response, the censored end of response coincided with the PFS censoring date (that was latest RECIST assessment or start of subsequent cancer therapy, whichever occurred first). The ITT population included all enrolled participants. Only participants with a response were analyzed for this outcome measure.

End point type	Secondary

End point timeframe:

Time from first occurrence of a documented response to disease progression or death from any cause, whichever occurred first (up to approximately 6 years)

End point values	Intent to Treat (ITT)			
Subject group type	Subject analysis set			
Number of subjects analysed	158			
Units: Months				
median (confidence interval 95%)	27.79 (18.89 to 43.30)			

Statistical analyses

Secondary: Change from Baseline in European Quality of Life (EuroQoL) Group 5-Dimension 5-Level (EQ-5D-5L) Self Report Questionnaire Health Utility Score

End point title	Change from Baseline in European Quality of Life (EuroQoL) Group 5-Dimension 5-Level (EQ-5D-5L) Self Report Questionnaire Health Utility Score

End point description:

The EuroQol 5-Dimension Questionnaire (EQ-5D-5L) is a self-report health status questionnaire that consists of 6 questions used to calculate a health utility score for use in health economic analysis. There are two components to the EuroQol EQ-5D: 1) five health dimensions that assess mobility, self-care, usual activities, pain/discomfort, and anxiety/depression; 2) a visual analogue scale (VAS) that measures health state. There are 5 response levels for each dimension (1=no problems, 2=slight problems, 3=moderate problems, 4=severe problems, and 5=extreme problems) with the highest level representing the worst outcome. The VAS is scored on a scale from 0 to 100, with 0 representing the worst imaginable health and 100 representing the best imaginable health. The ITT population included all enrolled participants who completed the questionnaire at baseline and had 1 post-baseline assessment.

End point type	Secondary

End point timeframe:

Baseline, Day 1 of Cycles 1, 2, 3 and thereafter every 9 weeks for 54 weeks from study treatment start; and then every 12 weeks until progression/study discontinuation (up to approximately 6 years) (Cycle length = 21 days)

End point values	Intent to Treat (ITT)

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline up to end of study (up to approximately 6 years)

Adverse event reporting additional description:

Serious and other AEs were reported based on the safety population, which included all randomized participants who received any amount of study treatment, regardless of whether a full or partial dose was received. This population was evaluated after the initiation of study treatment.

Assessment type	Systematic

Dictionary used

Dictionary name	MedDRA
Dictionary version	25.1

Reporting groups

Reporting group title	Atezolizumab

Reporting group description:

Participants received atezolizumab every 3 weeks (Q3W) until investigator assessed loss of clinical benefit, unacceptable toxicity, investigator or participant decision to withdraw from therapy, or death (whichever occurred first).

Serious adverse events	Atezolizumab		
Total subjects affected by serious adverse events			
subjects affected / exposed	380 / 997 (38.11%)		
number of deaths (all causes)	775		
number of deaths resulting from adverse events

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 May 2017	The following updates were made to the protocol: [1] The term "immune-mediated" was changed to "immune-related" throughout the protocol; [2] The term "antitherapeutic antibody" was replaced with "anti-drug antibody;" [3] Updates were made to the eligibility criteria; [4] Language was updated to match current recommendations for atezolizumab administration; [5] Tumor response evaluations were revised; [6] Language for HBV serology was updated; [7] Language was added that clarified the use of biomarker samples after participant withdrew consent; [8] Language for electrocardiogram assessments was updated; [9] The list of AESI's was updated; [10] Correction to the reporting of infusion-related reactions; [11] The definition of abnormal liver function tests was revised; [12] Specific details related to the reporting of deaths was revised; [13] Language related to hospitalization or prolonged hospitalization was revised; [14] Two additional subgroup analyses were added; [15] Language related to protocol deviations was revised; [16] Link to the Roche Global Policy on Sharing of Clinical Trials was updated; [17] Appendices 1, 8 and 9 were updated; [18] Appendix 10 was added; [19] Additional minor changes were made to improve clarity and consistency.
22 February 2018	The following updates were made to the protocol: [1] Addition of appendix 11.
08 October 2018	The following updates were made to the protocol: [1] Appendix 11 was updated to include the changes made to the TECENTRIQ® International Brochure versions 12 and 13.
22 October 2019	The following updates were made to the protocol: [1] The Medical Moinitor changed; [2] The interruption period of atezolizumab changed; [3] "Immune-related" was changed to "immune-mediated;" [4] Quality tolerance limits were introduced.
03 March 2021	The following updates were made to the protocol: [1] Text was added to describe the potential consequences of COVID-19 on atezolizumab therapy; [2] text was added to indicate that sites could confirm that appropriate temperature conditions had been maintained during Investigational Medicinal Product (IMP) transit; [3] text was added to clarify what were considered potential risks for atezolizumab; [4] the list of adverse events of special interest (AESIs) were updated; [5] reporting requirements for IRRs were updated; [6]

17 December 2021	The following updates were made to the protocol: [1] Benefit-risk assessment and guidance on concomitant administration of coronavirus disease 2019 vaccines with atezolizumab was added; [2] Language was added to indicate that sites could confirm that appropriate temperature conditions had been maintained during IMP transit; [3] Public information source could be used to obtain information about survival status about participants who withdrew; [4] The protocol was updated to align with the current Roche Atezolizumab protocol template; [5] The Roche Global Policy on Continued Access to Investigational Medicinal Product was added; [6] The responsibilities of the Principal Investigator and the role of the Medical Monitor were clarified; [7] The serious adverse events and adverse events of special interest reporting timelines were corrected; [8] Language clarified that study adverse event reports would not be derived from patient reported outcome (PRO) data by the Sponsor; [9] Additional language regarding Roche's data retention policy, study compliance with applicable laws and study data management, sharing and application was added; [10] The language regarding the informed consent form revision and the re-consenting in accordance with local applicable laws and IRB/EC policy was clarified; [11] The guidelines for management of suspected anaphylactic reaction were updated; [12] The term "primary biliary cholangitis" replaced "primary biliary cirrhosis;" [13] Adverse Event management guidelines were updated; [14] The study synopsis was simplified; [15] Additional minor changes were made to improve clarity and consistency.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
