Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 July 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	05 November 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To provide confirmatory data on the beneficial effect of 2.0 g/kg of Octagam 10% given every 4 weeks compared with placebo in subjects with active DM based on the percentage of responders at Week 16.

Protection of trial subjects:

This trial was conducted in accordance to the principles of ICH- GCP, ensuring that the rights, safety and well-being of patients are protected and in consistency with the Declaration of Helsinki and national regulatory requirements. Inclusion and exclusion criteria were carefully defined in order to protect subjects from contraindications, interactions with other medication and risk factors associated with the investigational medicinal product. Study safety was assessed such as monitoring of AEs and SAEs, monitoring of safety lab results, concomitant medication and vital signs.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 February 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 1
Country: Number of subjects enrolled	Poland: 4
Country: Number of subjects enrolled	Czech Republic: 12
Country: Number of subjects enrolled	Germany: 4
Country: Number of subjects enrolled	Hungary: 15
Country: Number of subjects enrolled	Canada: 1
Country: Number of subjects enrolled	Romania: 2
Country: Number of subjects enrolled	Russian Federation: 21
Country: Number of subjects enrolled	Ukraine: 8
Country: Number of subjects enrolled	United States: 27
Worldwide total number of subjects	95
EEA total number of subjects	38

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	75
From 65 to 84 years	20
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Patients with a diagnosis of definite or probable Dermatomyositis according to the Bohan and Peter criteria were screened according to predefined in- and exclusion criteria.

Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Subjects received 4 infusions of placebo every 4 weeks during the blinded First Period (up to week 16). If confirmed deterioration (deterioration at 2 consecutive visits) during the First Period, subjects switched to Octagam 10%. After response assessment at Week 16, all subjects with no confirmed deterioration and subjects switched to Octagam 10% due to confirmed deterioration but without further confirmed deterioration during the First Period continued to receive 2.0 g/kg of Octagam 10% every 4 weeks during the subsequent 6-months open-label Extension Period. At Week 28, subjects who were stable on 2.0 g/kg Octagam 10% could be switched to 1.0 g/kg Octagam 10%, at the discretion of the investigator. Subjects randomized to placebo and switched to Octagam 10% due to confirmed deterioration, who deteriorated also during Octagam 10% treatment at 2 consecutive visits were dropped-out after response assessment at Week 16 and did not enter the Extension Period.

Arm type	Experimental
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received 4 infusions of placebo every 4 weeks during the blinded First Period (up to week 16). If confirmed deterioration (deterioration at 2 consecutive visits) during the First Period, subjects switched to Octagam 10%.

Arm title	Octagam 10%
------------------	-------------

Arm description:

Subjects received 4 infusions of 2.0 g/kg Octagam 10% every 4 weeks during the blinded First Period (16 weeks). If confirmed deterioration (deterioration at 2 consecutive visits) during the First Period, subjects switched to the alternate treatment. After response assessment at Week 16, all subjects with no confirmed deterioration during the First Period continued receiving 2.0 g/kg of Octagam 10% every 4 weeks during the subsequent 6-months open-label Extension Period. At Week 28, subjects who were stable on 2.0 g/kg Octagam 10% could be switched to 1.0 g/kg Octagam 10%, at the discretion of the investigator. Subjects randomized to Octagam and switched to the alternate treatment due to confirmed deterioration were dropped-out after response assessment at Week 16 and did not enter the Extension Period.

Statistical analyses

Statistical analysis title	Proportion of Responders
Statistical analysis description:	
The primary endpoint measure 'response' was assessed at Week 16 based on the TIS score. The proportion of responders within both treatment groups was compared by the Cochran-Mantel-Haenszel test, stratified by GDA at baseline (randomization stratum), using a two-sided alpha level of 0.05. The primary analysis was to be considered a success if the proportion of responders was significantly higher in the octagam 10% group compared to the placebo group.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 July 2017	<p>Amendment 3:</p> <ul style="list-style-type: none"> -Following a recommendation of the Steering Committee inclusion of patients with Dermatomyositis who are under no current treatment due to intolerance and/or non-responsiveness to DM-related medication has been added -upon recommendation by the Steering Committee exclusion criterion was amended to shorten the waiting period for patients after excision of basal or squamous cell skin cancer -Following a recommendation by the Steering Committee Subjects diagnosed with Juvenile Dermatomyositis were excluded from the study. - further specification of some exclusion criteria -Maximally allowed stable dose as concomitant therapy for Hydroxychloroquine was re-defined -in accordance with the Steering Committee the definition of "Confirmed deterioration" was updated -As requested by the study's Independent Adjudication Committee Thyroid-stimulating hormone (TSH) was added to the clinical chemistry test panel - Details on breaking the blind have been updated upon request of the Czech Regulatory Authority
18 July 2018	<p>Amendment 4:</p> <ul style="list-style-type: none"> -The maximum infusion rate has been reduced to 0.04 mL/kg/min upon request of FDA -Duration of infusion cycles for extension period changed from 2 days to 2-5 days -Upon FDA request a new stopping rule was implemented for TEEs observed on or after the cut-off date of 04-Jul-2018 (since introduction of reduced maximum infusion rate of 0.04 mL/kg/min) -Thromboembolic events will be reported as SAE (medical occurrence that at any dose is another important medical event) - Exclusion criterion with reference to forbidden medication has been added for clarification -Time window defined for Direct Coombs' test taken prior infusion cycle has been extended for administrative reason
05 November 2018	<p>Amendment 6:</p> <ul style="list-style-type: none"> -Exclusion criterion was extended so that patients with any prior TEE event, regardless of the onset of the event, are not be eligible for participation in the study -References were added to explicitly state the higher risk for thromboembolic events in "newly" diagnosed patients with DM. -For the safety of patients with risk factors for thromboembolic events or patients who are in the initial disease stage after diagnosis the Permitted Concomitant Therapy Section has been amended with the information that TEE prophylaxis, if deemed necessary by the investigator, is allowed as a precautionary measure and should follow standard of care. Its use must be documented.
12 March 2019	<p>Amendment 7:</p> <p>Early Termination section has been updated based on the opinion of the IDMC. TEEs with a likely temporal and cause-effect relationship which occur in a single subject within a short clinical time period should be counted as a single adverse events of special interest (AESI) including for the calculations performed for stopping rules.</p>
03 July 2019	<p>Amendment 8:</p> <ul style="list-style-type: none"> -As requested by FDA the definition of responders in study protocol was reworded and the primary endpoint was reworded subsequently in order to be unambiguous

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
