Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 April 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	27 April 2023
Global end of trial reached?	Yes
Global end of trial date	27 April 2023
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

TO EVALUATE THE EFFECTIVENESS AND SAFETY OF OCRELIZUMAB IN PATIENTS WITH EARLY STAGE RELAPSING REMITTING MULTIPLE SCLEROSIS

Protection of trial subjects:

The study was conducted in accordance with the principles of the "Declaration of Helsinki" and Good Clinical Practice (GCP) guidelines according to the regulations and procedures described in the protocol.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 March 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Full cohort includes both 1st Enrollment Cohort in the "original" study and 2nd Enrollment Cohort to participate in the shorter infusion substudy.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Ocrelizumab
-----------	-------------

Arm description:

First Enrollment Cohort. Ocrelizumab was administered intravenously (IV) as two 300-milligram (mg) infusions on Days 1 and 15, followed by one 600-mg infusion dose every 24 weeks (+/- 14 days) for a maximum of 8 doses throughout the 192 weeks treatment period

Arm type	Experimental
Investigational medicinal product name	Ocrelizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate and solvent for solution for infusion
Routes of administration	Subcutaneous use

Dosage and administration details:

Ocrelizumab was administered intravenously (IV) as two 300-milligram (mg) infusions on Days 1 and 15, followed by one 600-mg infusion dose every 24 weeks (+/- 14 days)

Number of subjects in period 1	Ocrelizumab
Started	1225
Treatment Period	1225
Safety Follow-up Period	59 ^[1]
Completed	1010
Not completed	215
Adverse event, serious fatal	12
Site Closure	3
Physician decision	13
planned pregnancy	17
Consent withdrawn by subject	77
Changed to Commercial Ocrelizumab	4
Adverse event, non-fatal	25
Pregnancy	7

Terminated By Sponsor	14
Lost to follow-up	17
disease progression	1
Lack of efficacy	10
Protocol deviation	15

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Data is being provided for each stage of this study rather than all arms in the baseline period at once

End point description:

Relapse is defined as occurrence of new or worsening neurological symptoms attributable to MS, as determined using EDSS/FSS assessment. The adjusted annualized relapse rate is reported which is: Adjusted by age at disease diagnosis, Baseline EDSS, Presence of T1 Gd-enhanced lesion at screening and Presence of relapses in the last year prior to enrollment. Log-transformed exposure time is included as an offset variable.

The report contains data up to week 192 of the treatment period of each individual participant.
