

Clinical trial results:

The Effect of Selenium Supplementation on Musculoskeletal Health in Older Women - Double-blind, randomised, placebo-controlled trial

Summary

EudraCT number	2016-002964-15
Trial protocol	GB
Global end of trial date	30 January 2020

Results information

Result version number	v1 (current)
This version publication date	11 January 2022
First version publication date	11 January 2022

Trial information

Trial identification

Sponsor protocol code	STH19102
-----------------------	----------

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT02832648
WHO universal trial number (UTN)	-
Other trial identifiers	clinical trials.gov: NCT02832648 , Funder Reference: NIHR EME 14-200-20

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 November 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	06 November 2018
Global end of trial reached?	Yes
Global end of trial date	30 January 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Objective: to determine if selenium supplementation is beneficial for osteoporosis prevention and muscle function in postmenopausal women

Protection of trial subjects:

All participants were given a participant information sheet to read and consider for at least 24 hours before attending for a screening visit for the study. Participants were reviewed by a clinician who was delegated to this task, according to the strict inclusion and exclusion criteria. All participants give written informed consent prior to enrolment to the study. An assessment of radiation exposure was performed by the Radiation Protection Advisor for the Sheffield Teaching Hospitals NHS Foundation Trust prior to ethical review of the project. GCP procedures were in place to ensure appropriate consent, confidentiality and privacy. Data were handled in accordance with the Data Protection Act.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	11 January 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 120
Worldwide total number of subjects	120
EEA total number of subjects	120

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	50
From 65 to 84 years	70

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

Participants were identified from AUBM volunteer database, Metabolic Bone Centre, Northern General Hospital, posters/email/website/word of mouth. All volunteers who passed pre-eligibility checks and attended for consent and screening were registered and allocated a study screening number.

Pre-assignment

Screening details:

Medical history for inclusion/exclusion criteria, BMD spine and hip by DXA, Blood tests –for diabetes mellitus, thyroid dysfunction, bone profile, Eligibility was confirmed by the PI or delegated medical practitioner.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Blinding implementation details:

The active treatment was overencapsulated and a matched placebo manufactured to maintain the blind.

Arms

Are arms mutually exclusive?	Yes
Arm title	Selenase 50mcg

Arm description:

Selenium 50mcg

Arm type	Experimental
Investigational medicinal product name	Selenase 50mcg
Investigational medicinal product code	
Other name	Selenium
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

50 mcg per day for 6 months

Arm title	Selenase 200mcg
------------------	-----------------

Arm description:

Selenium 200mcg

Arm type	Experimental
Investigational medicinal product name	Selenase 200mcg
Investigational medicinal product code	
Other name	Selenium
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

200mcg per day for 6 months

Arm title	Placebo

Primary: Between-group difference in urinary N-telopeptide of type I collagen (NTX) at 26 weeks

End point title	Between-group difference in urinary N-telopeptide of type I collagen (NTX) at 26 weeks
End point description: Between-group difference in urinary N-telopeptide of type I collagen (NTX) at 26 weeks. We chose NTX because we know how change in NTX relates to fracture risk reduction with bisphosphonates (20): a 30% decrease in NTX is associated with a 40% reduction in spine fracture and 66% of the vertebral fracture risk reduction at three years is explained by change in NTX.	
End point type	Primary

Statistical analyses

Statistical analysis title	50 mcg vs placebo
Statistical analysis description: Primary endpoint analysis was the between-group difference in urine NTx to creatinine ratio at 26 weeks. Analysis of covariance was used with 26-week NTx to creatinine measurement as the dependent outcome variable and treatment group and baseline NTx to creatinine measurement as the independent variables. If the residuals from the model were not normally distributed, the values would be log transformed and the treatment group differences back transformed to be presented as a ratio.	
Comparison groups	Placebo v Selenase 50mcg

Number of subjects included in analysis	69
Analysis specification	Pre-specified
Analysis type	equivalence
P-value	= 0.74 ^[1]
Method	ANCOVA

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Intended to measure hydroperoxidases as a marker of reactive oxygen species but assay was withdrawn. Most IL6 measurements were below the limit of detection of 1.6ng/l (74/110 at base, 71/110 at w13 and 74/108 at w26), no further analysis conducted.
