Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 April 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	01 April 2019
Global end of trial reached?	Yes
Global end of trial date	01 April 2019
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To compare all-cause mortality at Day 14 of subjects who receive S-649266 with that of subjects who receive the comparator, meropenem, in adults with hospital-acquired bacterial pneumonia (HABP), ventilator-associated bacterial pneumonia (VABP), or healthcare-associated bacterial pneumonia (HCABP) caused by Gram-negative pathogens

Protection of trial subjects:

An independent DSMB was established for this study. Interim analyses were performed to review unblinded safety and efficacy data after approximately 50 and 150 subjects were randomized and had completed treatment and follow-up. After the unblinded review of the first 50 subjects by the DSMB, a request was made to have an additional unblinded review of safety and efficacy data after 100 subjects were randomized into the study. Because most of the subjects were already enrolled at the time of the DSMB meeting for 100 subjects, the DSMB also reviewed up-to-date unblinded mortality data for 232 subjects.

Background therapy: -

Evidence for comparator:

Meropenem was chosen as the comparator based on the American Thoracic Society/Infectious Disease Society guidelines of 2004 as an option for initial combination empiric therapy at a dosage of 1 g IV q8h in subjects with late-onset disease or risk factors for multidrug-resistant (MDR) pathogens. The dosage of meropenem administered and the duration of treatment took into account the type and severity of infection to be treated and the clinical response to treatment. The SmPC indicates that a dose of up to 2 g given 3 times daily in adults and adolescents may be particularly appropriate when treating some types of infections, such as infections due to less susceptible bacterial species (eg, Enterobacteriaceae, *P. aeruginosa*, and *Acinetobacter* spp.) or very severe infections. The dosage of meropenem was 2 g q8h infused IV over 3 hours to ensure the highest probability of bactericidal target attainment (40% $fT > MIC$), which is important especially in less susceptible bacterial species.

Actual start date of recruitment	24 October 2017
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 6
Country: Number of subjects enrolled	Belgium: 23
Country: Number of subjects enrolled	Czech Republic: 16
Country: Number of subjects enrolled	Estonia: 15
Country: Number of subjects enrolled	France: 10
Country: Number of subjects enrolled	Germany: 2

Country: Number of subjects enrolled	Canada: 1
Country: Number of subjects enrolled	Japan: 9
Country: Number of subjects enrolled	Philippines: 73
Country: Number of subjects enrolled	Taiwan: 5
Country: Number of subjects enrolled	United States: 12
Worldwide total number of subjects	300
EEA total number of subjects	96

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	123
From 65 to 84 years	160
85 years and over	17

Subject disposition

Recruitment

Recruitment details:

A total of 123 sites were opened for enrollment.

Pre-assignment

Screening details:

Male or female subjects 18 years of age or older who had a documented nosocomial pneumonia (HABP/VABP/HCABP) caused by an aerobic Gram-negative pathogen only and all must have Gram-negative infection involving the lower respiratory tract.

Pre-assignment period milestones

Number of subjects started	300
Number of subjects completed	300

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Assessor

Blinding implementation details:

Cefiderocol was prepared and administered within the same time frame after preparation as meropenem. The infusion bag containing a reconstituted study or comparator drug was identified with the study number and subject's identification number but did not identify the specific drug product. For comparability of cefiderocol and the comparator drug meropenem, the dosing solutions were normal saline and were both dosed 2 g, administered IV over 3 hours, q8h (for patients with normal renal function).

Arms

Are arms mutually exclusive?	Yes
Arm title	Cefiderocol

Arm description:

Cefiderocol (1 g/vial) was provided as a powder for solution for IV administration

Arm type	Experimental
Investigational medicinal product name	cefiderocol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

The proposed cefiderocol dosage regimen for the treatment of serious or life-threatening infections is 2 g q8h infused over 3 hours.

The initial dosage for each subject was adjusted based on eGFR calculated by MDRD equation and CrCl by Cockcroft-Gault equation.

Renal function for all subjects was assessed at early assessment (EA) to determine whether there were changes in renal function for which the dosage of the study treatment needed to be adjusted. The main purpose for this was to ensure that drug levels remained in a safe and therapeutic range. If renal function was changed at EA from Screening, dose adjustment was required.

For subjects with eGFR ≥ 90 mL/min/1.73 m² and CrCl ≥ 120 mL/min by Cockcroft Gault equation at Screening or at EA, a CrCl measured by urinary excretion with urine collection of 2 hours to 8 hours duration was determined in order to determine whether an additional dose adjustment was required.

Arm title	meropenem
------------------	-----------

Arm description:

A powder for solution for injection or infusion, as commercially available, 500/1000 mg/vial)

Arm type	Active comparator
Investigational medicinal product name	meropenem
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

The dosage for meropenem of 2 g q8h with infusion over 3 hours.

Number of subjects in period 1	Cefiderocol	meropenem
Started	148	152
Completed	106	110
Not completed	42	42
Adverse event, serious fatal	39	34
Recovery	-	1
Adverse event, non-fatal	-	1

Statistical analyses

Statistical analysis title	Cefiderocol vs meropenem
----------------------------	--------------------------

Statistical analysis description:

Adjusted estimates of the difference in the all-cause mortality at Day 14 between cefiderocol and meropenem groups were calculated along with 95% confidence intervals (CIs) based on a stratified analysis using Cochran-Mantel-Haenszel (CMH) weights, which were calculated with APACHE II score (≤ 15 and ≥ 16) as the stratified factor. The CIs were 2-sided. Noninferiority (NI) was concluded if the upper bound of 95% CI for the difference in mortality at Day 14 was less than NI margin of 12.5%

Comparison groups	Modified Intent-to-Treat meropenem v Modified Intent-to-Treat cefiderocol

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All AEs were collected from the time of having signed ICF through approximately 28 days after the last dose of study treatment for randomized subjects. If a subject withdrew early from the study, AEs collected for 28 days after last dose of treatment

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 December 2016	added a repeat of PK blood sampling in the event that the study dosage was changed due to changes in renal function at EA; added the topline results of the thorough QT (TQT) study, which demonstrated that cefiderocol had no clinically significant effect of regulatory concern on the QTc interval and removed the requirement for ECG evaluations other than at Screening based on the results of the TQT study; updated the status of the then ongoing cUTI Study and the DSMB review process/results; added the requirement for a Day 14 and Day 28 survival assessment if these study days for an individual subject did not already have assigned study procedures; and provided editorial/administrative changes and clarifications.
24 July 2017	clarified that linezolid administration is mandated only for at least 5 days (ie, added criteria under which linezolid could be discontinued after 5 days); added valproic acid to the list of prohibited concomitant therapy; added an additional DSMB meeting after 150 subjects were enrolled to re-estimate the necessary sample size; provided the option to raise the minimum APACHE II score to ≥ 8 if the mortality rate was deemed insufficient after 50 subjects had completed the study; excluded subjects with lung abscess or clinical bronchiectasis; added rescreeing criteria; clarified process for reporting SAEs; and provided editorial/administrative changes and clarifications
21 December 2018	revised the address for the location of the Shionogi office responsible for European study sites from London to Amsterdam to a European country-specific amendment
22 February 2019	revised the address for the Shionogi office responsible for European/Middle Eastern study sites from London to Amsterdam for the global protocol; added the Russia-specific change in absolute nucleophil count to the global protocol; added the statistical analysis of superiority for all-cause mortality at Day 14 to the list of key secondary endpoints and provided criteria for concluding superiority; clarified that analysis of the pharmacoeconomic endpoint (resource utilization) would be done outside the CSR; clarified the use of antibiotics for infections other than Gram negative pneumonia (anaerobic or C. difficile infections); added the requirement that carbapenem resistance status of isolated pathogens be recorded in the eCRF; clarified that analyses performed by the DSMB, which were blinded to the sponsor's personnel and not shared with the sponsor, were considered interim analyses.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
